Appendix A

Site Photographs

Facing northwest, this is a view of the southeast corner of the project site. The on-site detention basin is visible in the background.

Facing north, this is a view of the Darien Street ROW on the eastern boundary of the project site. The areas surrounding the ROW include mowed and maintained herbaceous uplands and a storm sewer grated inlet. The on-site detention basin is visible to the west (left).

Facing west, this is a view of the on-site detention basin in the center of the project site. The bottom of this detention basin is vegetated with herbaceous vegetation and is consistently mowed.

Facing southwest, this is a view of the on-site detention basin in the center of the project site. Homestead Road and a high voltage transmission line are visible in the distance.

Facing west, this is a view of the western portion of the project site. Adjacent vegetative communities including a sweetgum (*Liquidambar styraciflua*) dominated forest to the east of the project site.

Facing northeast, this is a view of northern portion of the project site. The on-site detention basin is visible to the east.

Facing east, this is a view of the western portion of the project site. The on-site detention basin is visible to the foreground while adjacent upland forests are visible in the background.

Facing west, this is a view of Homestead Road on the western project boundary. A high voltage transmission line is visible to the south and the on-site detention basin is visible to the north.

Facing northeast, this is a view of a stormwater inlet where runoff enters the detention basin in the northeastern portion of the project site.

Facing north, this is a view of the bottom of the detention basin on the project site.
