

## **TASK 21: TRACK DEMONSTRATION OF EXERCISE OBJECTIVES**

### **Description**

The RAC Chair establishes procedures to track each exercise objective to document that OROs demonstrate objectives according to the frequencies established for Group A, B and C objectives.

### **Milestone**

Continuous.

### **References**

NUREG-0654.

### **Products**

Table or other record of current status of exercise objectives, including the dates of those exercised successfully and those still needing to be exercised successfully during the current six-year period.

### **Guidance**

As described in Task 2, objectives in Group A should be demonstrated in every exercise by all OROs responsible for those objectives. Objectives in Groups B and C should be demonstrated at least once every six years by all OROs responsible for those objectives. This ensures that all major elements of the plan are tested at least once every six years.

In tracking objectives, the RAC Chair should establish a list of objectives for which OROs have responsibility. For any given organization, this will depend on the breakdown of responsibilities between State and local governments and, if applicable, utility OROs for the particular site involved. A cumulative record should be kept for OROs, identifying for each exercise, which objectives were scheduled to be demonstrated and which were demonstrated successfully.

## **TASK 21: TRACK DEMONSTRATION OF EXERCISE OBJECTIVES**

A Radiological Emergency Preparedness Database is being developed by FEMA Regional offices in conjunction with the Standard Exercise Report Format. The database tracks the demonstration of all exercise objectives and may be used by RAC Chairs to satisfy the provisions of this task.
