

FEMA Urges Mid-Atlantic Residents to Prepare for Severe Weather as Tropical Storm Elsa Approaches

Release Date: 7/8, 2021

PHILADELPHIA – As Tropical Storm Elsa approaches the Mid-Atlantic, the Federal Emergency Management Agency (FEMA) is encouraging residents and business owners with interests in the Mid-Atlantic to stay aware of the weather and prepare for possible hazards such as flooding, tornadoes, and power outages. It only takes one storm to change your life, and that storm does not necessarily need to be a hurricane to cause damage.

“Tropical storms and hurricanes are not just a coastal threat. They can bring heavy rain, flooding, and damaging winds far enough inland that the entire Mid-Atlantic is at risk of these impacts,” said FEMA Region 3 Administrator MaryAnn Tierney. “FEMA is prepared to respond and support Mid-Atlantic communities. You should take steps to know your risk and prepare for severe weather. You can get started by [downloading the FEMA App](#) to your phone to get weather alerts from the National Weather Service and view preparedness tips/checklists.”

Preparedness Tips

- Always follow instructions from your local public safety officials during severe weather emergencies.
- If told to seek shelter or evacuate, do so without delay. Do not allow a fear of COVID-19 to prevent you from seeking shelter with others if that is your only option.
- Have several ways to receive warnings/alerts from the National Weather Service. Do not rely on a single source of weather alert information.
- [Turn ON Wireless Emergency Alerts \(WEAs\) in your smartphone settings.](#)
- [Keep a NOAA Weather radio tuned to your local emergency station.](#)
- Sign up for your [community's warning system](#). Stay tuned for the latest information. Follow the guidance of your local officials and check media and

weather reports via official sources, including social media.

- By [downloading the FEMA app](#), you can receive weather alerts from the National Weather Service for up to five different locations anywhere in the United States.
- Make a habit of checking the weather regularly. This could be TV news, a weather app on your smartphone, or an online weather service. Visiting www.weather.gov and entering your zip code will always give you an accurate forecast and inform you of any hazards in your area.
- Know Your Zone! Become familiar with your evacuation zone, the evacuation route and shelter locations.
- Take steps to protect yourself and your property:
 - Gather food, water, and other emergency supplies for each member of your family. Don't forget children and pets! Keep in mind each person's specific needs, including medication. For a full list of emergency supplies, visit www.ready.gov/kit
 - Keep important documents in a safe place or create password-protected digital copies. Consider using a waterproof container to store the copies.
 - Declutter drains and gutters to allow water to flow. Install check valves in plumbing to prevent backups.
 - Use a generator or other gasoline-powered machinery outdoors ONLY and away from windows.
 - Check on your neighbors to make sure they are safe and prepared.
 - Document your property in advance, including photographs, in case you need to make an insurance claim.
- When sheltering in your home, find an interior room on the lowest possible level and away from windows. Duck and cover under or next to a sturdy object.
- Visit www.ready.gov or talk to your local emergency manager if you have questions or need help making your severe weather safety plan.
- If you are an individual with a disability, access, or functional needs, please visit www.ready.gov/disability for specialized preparedness and planning tips.
