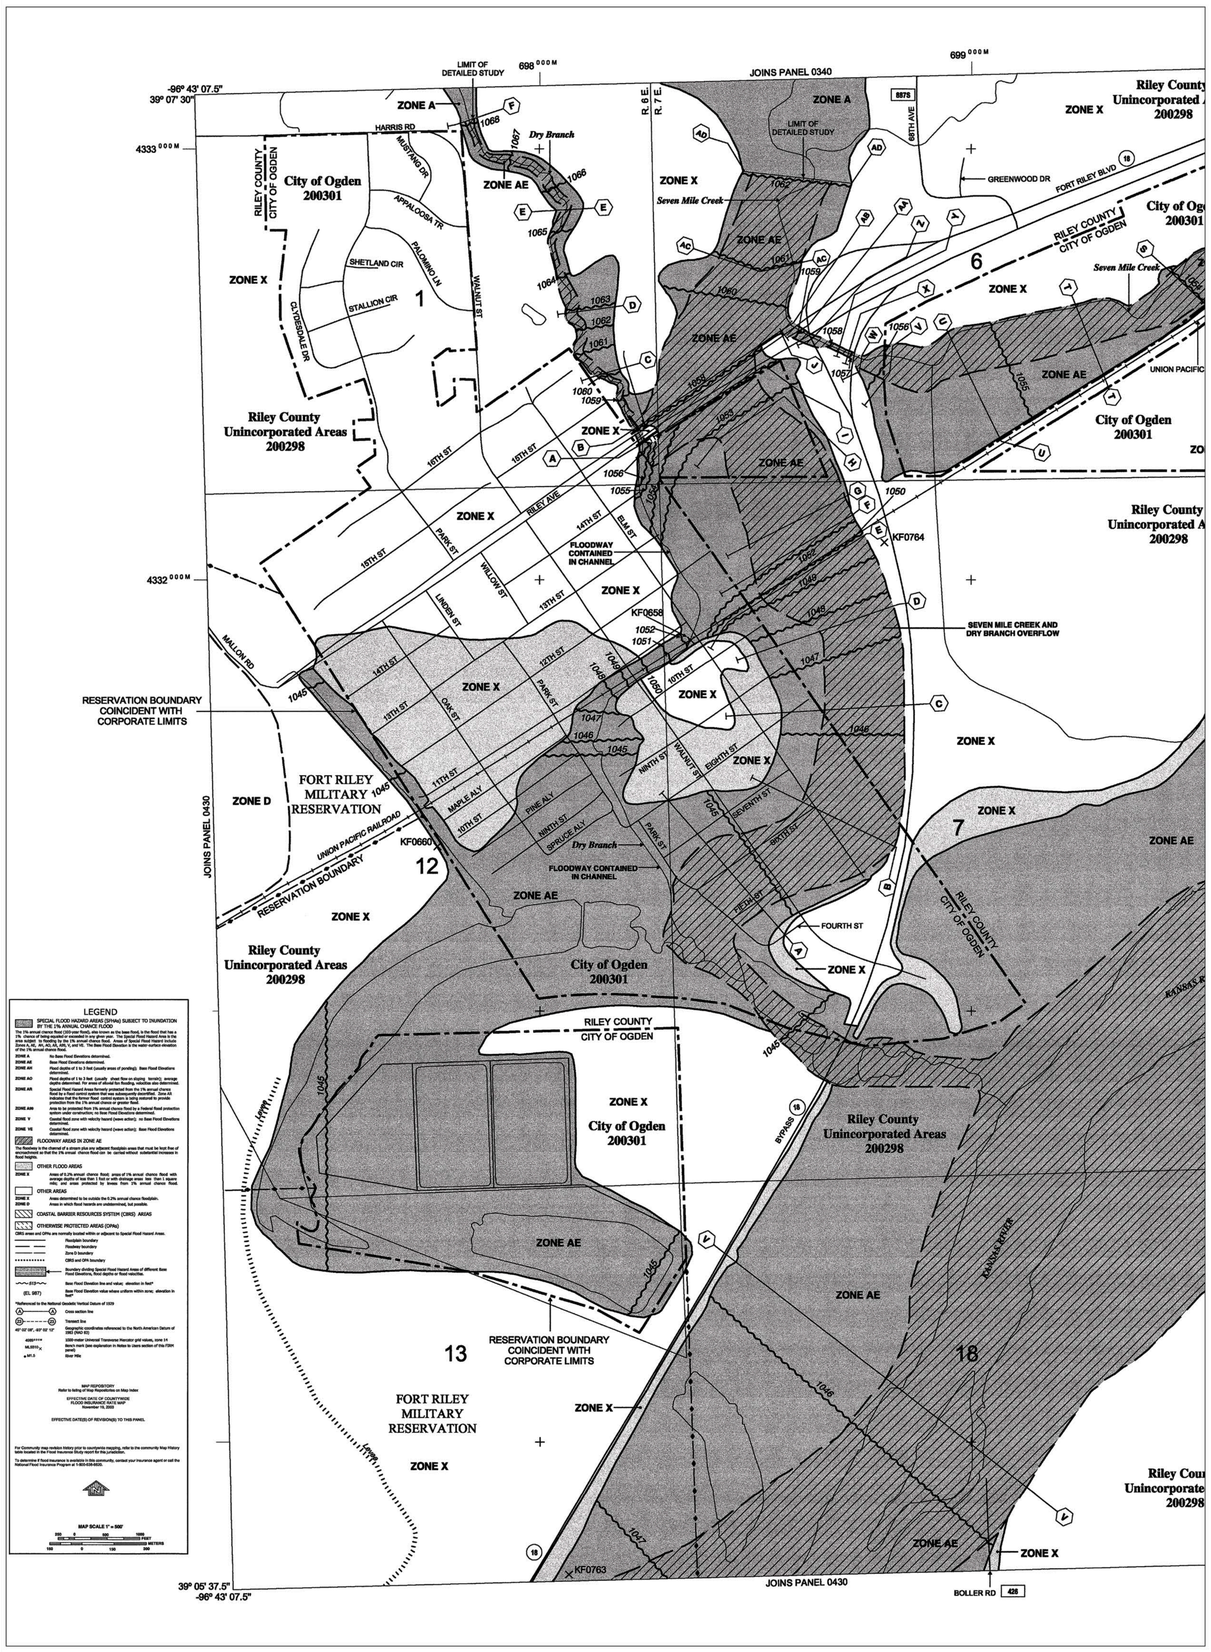
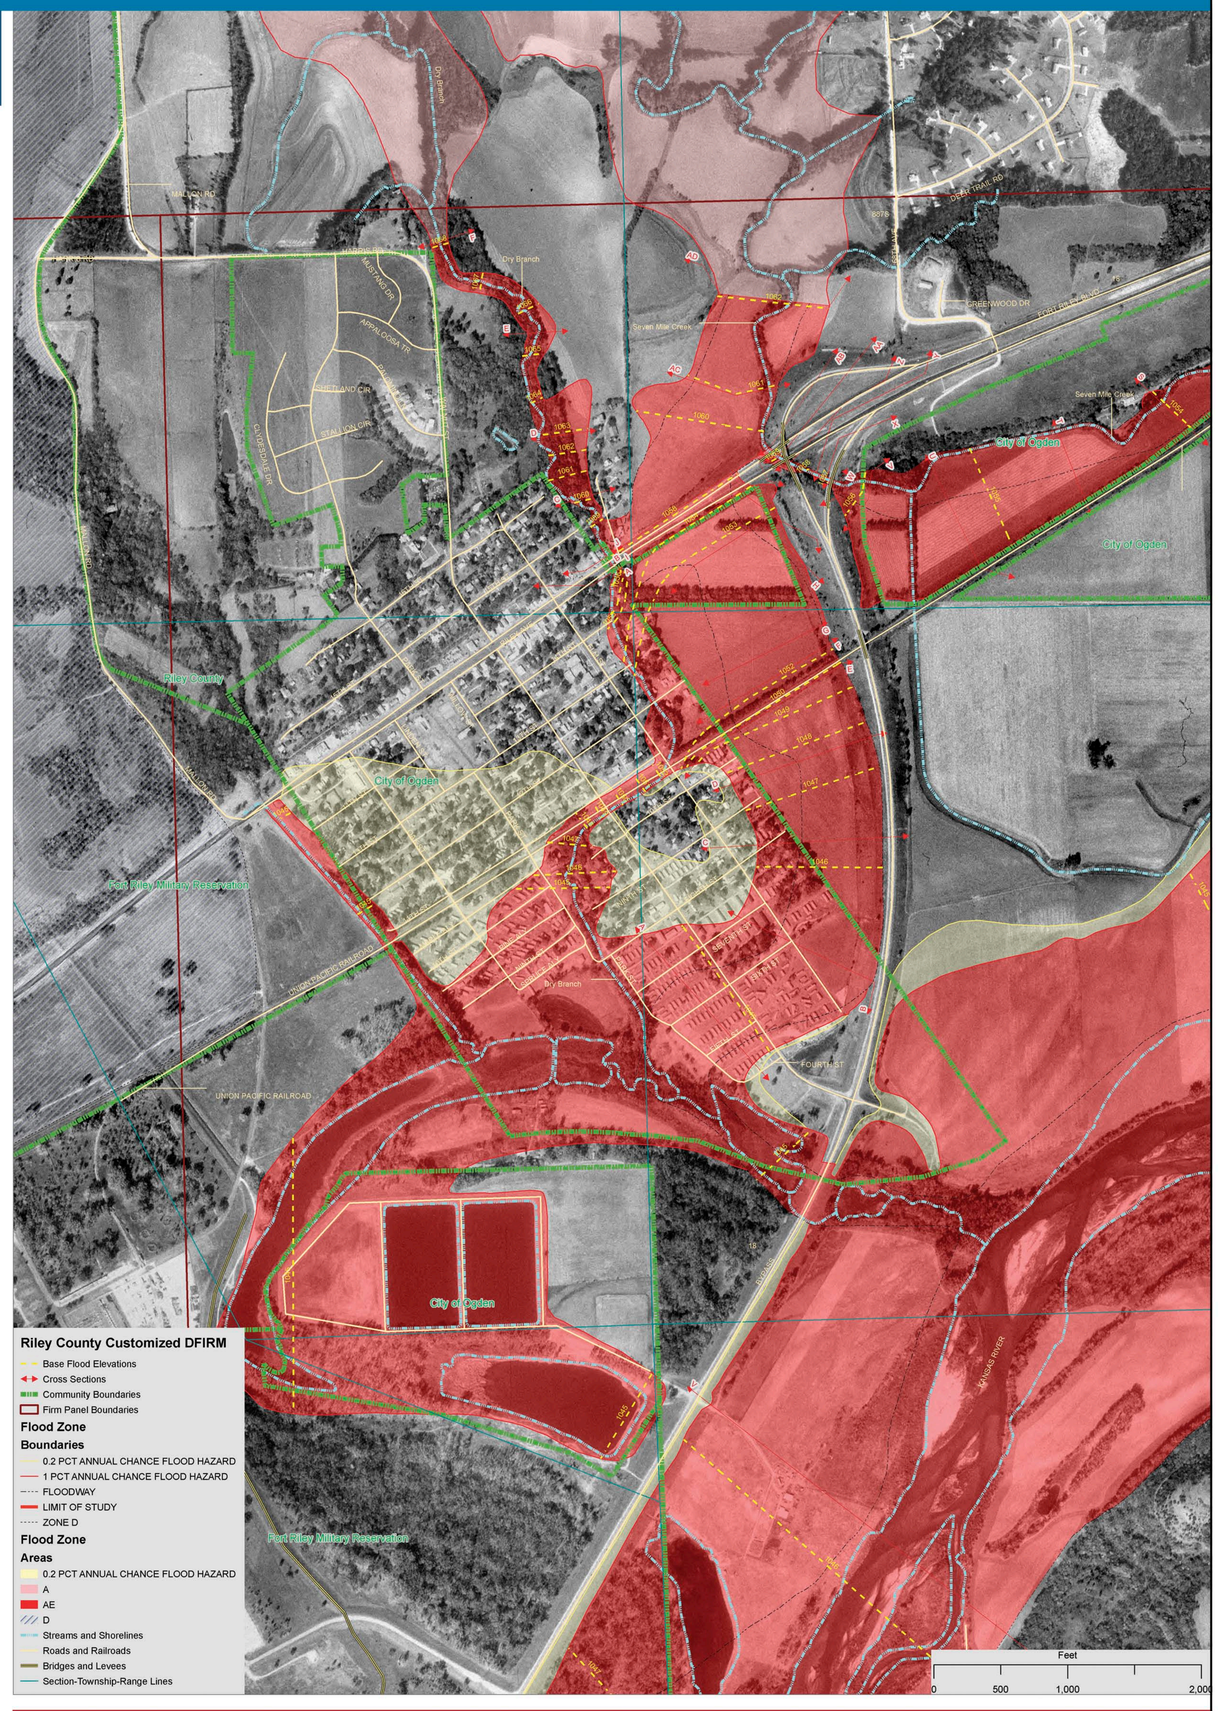
FLOOD MAP MODERNIZATION

FEMA

EFFECTIVE DFIRM





CUSTOMIZED DFIRM AND GIS DATA

FEMA's Digital Flood Insurance Rate Maps (DFIRMs) reflect the engineering back-up material used to develop the map (e.g., hydrologic and hydraulic models, flood profiles, floodway data table, Digital Elevation Models, and structure-specific data).

Digital Flood Insurance Rate Maps (DFIRMs) are produced using Geographic Information System (GIS) technology, allowing users to view information in a graphical format and add or remove data layers. This allows users to create tailored maps.
