

STATE AND LOCAL MITIGATION PLANNING  
how-to guide

# Bringing the Plan to Life

implementing the  
hazard mitigation plan

# Contents

foreword	i	
introduction	v	
<b>STEP ONE adopt the mitigation plan</b>	1-1	
task A brief local leadership	1-2	
task B demonstrate the support of partner organizations	1-2	
task C have the plan adopted by the proper legislative or executive authorities	1-3	
task D submit your plan for approval	1-3	
task E publicize the adoption and approval of the plan	1-3	
<b>STEP TWO implement the plan recommendations</b>	2-1	
task A confirm and clarify responsibilities	2-3	
task B begin to integrate mitigation actions throughout government operations	2-6	
task C monitor and document the implementation of your projects and actions	2-11	
task D establish indicators of effectiveness or success	2-12	
worksheet #1	2-13	
task E celebrate success	2-16	

**STEP THREE evaluate your planning results** 3-1

3

task A evaluate the effectiveness of the planning process 3-2

worksheet #2 3-3

task B evaluate the effectiveness of your actions 3-5

worksheet #3 3-6

task C determine why the actions worked (or did not work) 3-10

task D keep the community updated and involved,  
and celebrate your successes 3-16

**STEP FOUR revise the plan** 4-1

4

task A review those factors that affect your  
community's planning context 4-2

worksheet #4 4-4

task B analyze your findings and determine whether to  
revise your planning process or mitigation strategy 4-5

task C incorporate your findings into the plan 4-6

worksheet #5 4-7

afterword

appendix a glossary a-1

appendix b library b-1

appendix c worksheets c-1

# the hazard mitigation planning process

Hazard mitigation planning is the process of determining how to reduce or eliminate the loss of life and property damage resulting from natural and manmade hazards. As shown in this diagram, the hazard mitigation planning process consists of four basic phases.

For illustration purposes, this diagram portrays a process that appears to proceed sequentially. However, the mitigation planning process is rarely a linear process. It is not unusual that ideas developed while assessing risks should need revision and additional information while developing the mitigation plan, or that implementing the plan may result in new goals or additional risk assessment.

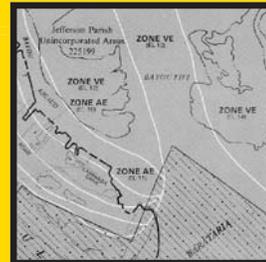

## organize resources

From the start, communities should focus on the resources needed for a successful mitigation planning process. Essential steps include identifying and organizing interested members of the community as well as the technical expertise required during the planning process.

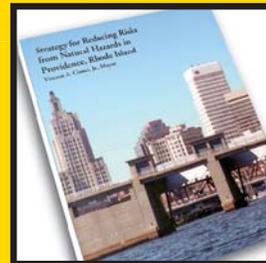

## assess risks

Next, communities need to identify the characteristics and potential consequences of hazards. It is important to understand how much of the community can be affected by specific hazards and what the impacts would be on important community assets.

## develop a mitigation plan

Armed with an understanding of the risks posed by hazards, communities need to determine what their priorities should be and then look at possible ways to avoid or minimize the undesired effects. The result is a hazard mitigation plan and strategy for implementation.

## implement the plan and monitor progress

Communities can bring the plan to life in a variety of ways ranging from implementing specific mitigation projects to changes in the day-to-day operation of the local government. To ensure the success of an on-going program, it is critical that the plan remains relevant. Thus, it is important to conduct periodic evaluations and make revisions as needed.
