**TABLE 1
FEMA PROJECT WORKSHEETS
RELATED TO HURRICANE SANDY DAMAGE TO THE FACILITY**

| PW # | Description | Repair Estimate |
|-------------|---|------------------------|
| UHBAJ37 | Substations/Cabling | \$34,816,850 |
| 0032 | Temporary Facilities | \$101,805 |
| 0075 | Emergency Sludge Processing | \$14,935,706 |
| 3589 | Emergency Protective Measures | \$2,591,618 |
| 3971 | Debris Removal | |
| UHBAJ17 | Administration Building | \$2,000,000 |
| 2279 | Administration Building Documentation Restoration | \$1,463,595 |
| 4397 | Cake Storage | \$293,528 |
| 4399 | Effluent Pump Station | \$469,938 |
| 2055 | Employee Services Building | \$23,815 |
| 3471 | Filter Press | \$790,852 |
| 3588 | Final Clarifiers | \$5,828,095 |
| 2056 | Fleet Vehicles/Equipment | \$529,181 |
| 3475 | Grit and Screening | \$463,381 |
| 2058 | Grit Incinerator | \$165,807 |
| UHBAJ23 | Grounds | \$16,978 |
| UHBAJ24 | Industrial Pollution Control (Lab) | \$1,170,000 |
| 2083 | Influent Pump Station | \$418,996 |
| 2060 | Main Security Building | \$24,224 |
| 3473 | Old Sludge Pumping | \$187,886 |
| UHBAJ29 | Operation and Maintenance Building | \$1,431,405 |
| 2274 | Oxygen Decks | \$423,955 |
| 2054 | Oxygen Production | \$65,593 |
| 2057 | Oxygen Scrubber | \$28,735 |
| UHBAJ30 | Primary Clarifiers | \$3,366,411 |
| 2275 | Return and Waste Sludge | \$366,495 |
| 2281 | Safety/Security (System) | \$1,294,694 |
| 2277 | Security Gate 3 | \$21,531 |
| 3472 | Sludge Handling Maintenance | \$165,181 |
| UHBAJ34 | Sludge Heat Treat (Zimpro) | \$10,400,000 |
| 4099 | Sludge Storage and Decant | \$1,932,868 |
| UHBAJ36 | Sludge Thickeners | \$2,557,015 |
| 2061 | Supernatant Treatment | \$378,808 |
| 2278 | Trucked in Liquid Waste | \$89,090 |
| 4168 | Tunnels | \$2,498,919 |

**TABLE 1
FEMA PROJECT WORKSHEETS
RELATED TO HURRICANE SANDY DAMAGE TO THE FACILITY**

| PW # | Description | Repair Estimate |
|-------------|-----------------------------|------------------------|
| 2059 | Warehouse | \$1,668 |
| 2276* | Wet Weather Pumping Station | \$400,932 |

*The cost of 2276, the Wet Weather Pumping Station, has increased from the original project cost, \$400,932 to \$1,522,071.71 as of the most recently completed project worksheet entered into EMIS on March 25, 2014.

**An additional project worksheet for the Wet Weather Pumping Station, 5076, with a project cost of \$122,363.50 was entered into EMIS on February 21, 2014.

**TABLE 2
SUMMARY OF ALTERNATIVES**

| Alternative | Is Project Purpose Met? | Impacts to Natural Environment | Social Concerns | Economic Aspects | Legal Constraints |
|---|---|---|---|---|---|
| No Action | No; taking no action would not safeguard against future flooding. | Plant failure during future flood events may result in similar negative impacts to environment/ waterway. | Risk of future loss of wastewater treatment services. | No immediate outlay of public funds, but risk of future loss of facility and operations due to flood. | NA |
| Component Floodproofing and On-Site Standby Power System | Yes | Similar to Proposed Alternative. | N/A | Costs > Proposed Alternative. | N/A |
| Elevating the entire site above the floodplain | Yes | Similar to Proposed Alternative. | N/A | Costs > Proposed Alternative. | N/A |
| Relocate the Facility outside floodplain | Yes | Presumed to be additional significant environmental impacts associated with development of large scale "green" site on prior developed urban expanse. | Major disruption to community due to construction of off-site infrastructure to serve new facility. | Cost significantly > Proposed Alternative. | Major environmental permitting constraints with new facility. |
| Construct floodwall and on-site standby power system (Proposed Alternative) | Yes | Minor impacts easily mitigated | N/A | Least cost of viable alternatives. | N/A |

**TABLE 3
SUMMARY OF POTENTIAL IMPACTS TO AFFECTED ENVIRONMENT**

| Affected Environmental/ Resource Area | Alternatives | IMPACT | | | | | Agency Coordination/ Permits | Mitigation/BMPs | Comments |
|--|---|-----------|------------|-------|----------|-------|---|--|---|
| | | No Impact | Negligible | Minor | Moderate | Major | | | |
| Geology/Soils | No Action | X | | | | | | | |
| | Proposed Alternative | | X | | | | Hudson Essex Passaic Soil Conservation District (HEPSCD) Soil Erosion and Sediment Control Plan Certification | Soil erosion and sediment control measures to be employed. | No impact to unique or protected geology or soils. |
| | Component Floodproofing/On-Site Standby Power System | | X | | | | | | |
| Air Quality | No Action | | X | | | | | | In the event of power outage, increased emissions would result from use of temporary combustion equipment. |
| | Proposed Alternative | | X | | | | NJDEP Title V Air Permit Modification. | Air emission controls to be installed and permit operational limits to be adhered to. | Net positive benefit is projected for on-site standby power system due to offset of utility-generated power at higher emission rates. |
| | Component Floodproofing/On-Site Standby Power System | | X | | | | NJDEP Title V Air Permit Modification. | More extensive air emission controls and operational limits. | |

**TABLE 3
SUMMARY OF POTENTIAL IMPACTS TO AFFECTED ENVIRONMENT**

| Affected Environmental/ Resource Area | Alternatives | IMPACT | | | | | Agency Coordination/ Permits | Mitigation/BMPs | Comments |
|--|--|-----------|------------|-------|----------|-------|--|--|---|
| | | No Impact | Negligible | Minor | Moderate | Major | | | |
| Wetlands/Water Resources | No Action | X | | | | | | | |
| | Proposed Alternative | | | X | | | NJDEP Individual Wetlands permit. | Wetland disturbance mitigated on-site through creation/enhancement/restoration of wetland areas. | Impact to emergent wetland due to construction of floodwall and stormwater outfall structures mitigated on-site; rip rap in tidal creeks for energy dissipation considered temporary disturbance. |
| | Component Floodproofing/On-Site Standby Power System | | X | | | | | | |
| Floodplains | No Action | X | | | | | | | |
| | Proposed Alternative | | X | | | | NJDEP Flood Hazard Area Individual Permit. | | Tidal flood supersedes fluvial in Jasper Creek. |
| | Component Floodproofing/On-Site Standby Power System | | X | | | | | | |
| Coastal Zone | No Action | X | | | | | | | |
| | Proposed Alternative | | X | | | | | | |
| | Component Floodproofing/On-Site Standby Power System | | X | | | | | | |
| Vegetation | No Action | X | | | | | | | |
| | Proposed Alternative | | X | | | | | Minor temporary disturbance to wetland vegetation and turf areas to be mitigated and locally restored. | |
| | Component Floodproofing/On-Site Standby Power System | | | | X | | | | |

**TABLE 3
SUMMARY OF POTENTIAL IMPACTS TO AFFECTED ENVIRONMENT**

| Affected Environmental/ Resource Area | Alternatives | IMPACT | | | | | Agency Coordination/ Permits | Mitigation/BMPs | Comments |
|--|--|-----------|------------|-------|----------|-------|---|---|--|
| | | No Impact | Negligible | Minor | Moderate | Major | | | |
| Wildlife and Fish | No Action | X | | | | | | | |
| | Proposed Alternative | | X | | | | | | Potential for localized and limited, short-term disruption to wildlife patterns during construction. |
| | Component Floodproofing/On-Site Standby Power System | | X | | | | | | Potential for localized and limited, short-term disruption to wildlife patterns during construction. |
| Threatened and Endangered Species | No Action | X | | | | | | | |
| | Proposed Alternative | | X | | | | NJDEP approvals through wetland and flood hazard area permitting. | Impact to potential habitat to be mitigated and/or restored. | No significant adverse direct impact to habitat for listed species (black-crowned night heron and cattle egret). NJDEP has confirmed no T&E habitat of concern on site through the wetlands delineation process. |
| | Component Floodproofing/On-Site Standby Power System | | X | | | | | | |
| Cultural Resources- Archaeological | No Action | X | | | | | | | |
| | Proposed Alternative | | | X | | | NJSHPO concurrence anticipated. | Archaeological monitoring recommended. | Proposed action will result in protection of resources. |
| | Component Floodproofing/On-Site Standby Power System | | | | | X | NJSHPO concurrence required. | HABS/HAER recordation, archaeological monitoring required at a minimum. | Major physical and visual effects to flood proof buildings and below-ground historic infrastructure. |

**TABLE 3
SUMMARY OF POTENTIAL IMPACTS TO AFFECTED ENVIRONMENT**

| Affected Environmental/ Resource Area | Alternatives | IMPACT | | | | | Agency Coordination/ Permits | Mitigation/BMPs | Comments |
|---|---|-----------|------------|-------|----------|-------|---------------------------------------|---|---|
| | | No Impact | Negligible | Minor | Moderate | Major | | | |
| Cultural Resources- Historic Buildings | No Action | X | | | | | | | |
| | Proposed Alternative | | X | | | | NJSHPO concurrence anticipated. | Archaeological monitoring recommended. | Proposed action will result in protection of resources. |
| | Component Floodproofing/On-Site Standby Power System | | | | | X | NJSHPO concurrence required. | HABS/HAER recording, archaeological monitoring required at a minimum. | Major physical and visual effects to floodproof buildings and belowground historic infrastructure. |
| Environmental Justice | No Action | X | | | | | | | |
| | Proposed Alternative | | X | | | | | | COC is not a disproportionately high or adversely burdened community. |
| | Component Floodproofing/On-Site Standby Power System | | X | | | | | | COC is not a disproportionately high or adversely burdened community. |
| Noise | No Action | X | | | | | | | |
| | Proposed Alternative | | X | | | | | Noise attenuation included with on-site standby power system design. | Will comply with state and local noise standards. |
| | Component Floodproofing/On-Site Standby Power System | | | X | | | | | |

**TABLE 3
SUMMARY OF POTENTIAL IMPACTS TO AFFECTED ENVIRONMENT**

| Affected Environmental/ Resource Area | Alternatives | IMPACT | | | | | Agency Coordination/ Permits | Mitigation/BMPs | Comments |
|--|--|-----------|------------|-------|----------|-------|------------------------------------|-----------------|--|
| | | No Impact | Negligible | Minor | Moderate | Major | | | |
| Traffic | No Action | X | | | | | | | |
| | Proposed Alternative | | X | | | | | | |
| | Component Floodproofing/On-Site Standby Power System | | X | | | | | | |
| Public Services and Utilities | No Action | X | | | | | | | |
| | Proposed Alternative | | | X | | | | | Project purpose is to prevent loss of function of this critical infrastructure wastewater treatment plant. Stormwater management plan involves modifications to plant localized stormwater management system by bifurcating on-site drainage from existing to independent system. On-site standby power system will support and provide redundancy to existing electric supply grid. |
| | Component Floodproofing/On-Site Standby Power System | | | X | | | | | |

**TABLE 3
SUMMARY OF POTENTIAL IMPACTS TO AFFECTED ENVIRONMENT**

| Affected Environmental/ Resource Area | Alternatives | IMPACT | | | | | Agency Coordination/ Permits | Mitigation/BMPs | Comments |
|--|--|-----------|------------|-------|----------|-------|------------------------------------|---|--|
| | | No Impact | Negligible | Minor | Moderate | Major | | | |
| Public Health and Safety | No Action | | | | | X | | | With no action, the facility remains vulnerable to a similar flood event. |
| | Proposed Alternative | | | | | X | | | Alternative protects the public health and safety during a future flood event. |
| | Component Floodproofing/On-Site Standby Power System | | | | | X | | | Alternative protects the public health and safety during a future flood event |
| Hazardous Materials | No Action | X | | | | | | | |
| | Proposed Alternative | | | X | | | LSRP oversight. | Soil management plan to be implemented. | |
| | Component Floodproofing/On-Site Standby Power System | | | | X | | LSRP oversight. | Soil management plan to be implemented. | Impact to infrastructure and operations of each process component and building. |
| Climate Change | No Action | | X | | | | | | In the event of power outage, increased emissions would result from use of temporary combustion equipment. |
| | Proposed Alternative | | X | | | | | | |
| | Component Floodproofing/On-Site Standby Power System | | X | | | | | | |

TABLE 3 IMPACT DEFINATIONS

| | |
|------------|--|
| No Impact | The resource would not be impacted |
| Negligible | The resource would not be impacted, or changes would be non-detectable or if detected, impacts would be slight and local. Impacts would be well below regulatory limits |
| Minor | Impacts to the resource would be measurable, although the changes would be small and localized. Impacts would be within or below regulatory limits. Mitigation measures may be necessary to reduce potential effects |
| Moderate | Impacts to the resource would be measurable and have localized and potentially regional scale impacts. Impacts would be within or below regulatory limits, but historical conditions would be altered on a short-term basis. Mitigation measures may be necessary to reduce potential effects |
| Major | Impacts would be readily measurable and would have substantial consequences on a local and potentially regional level. Impacts would exceed regulatory limits. Mitigation measures to offset the effects would be required to reduce impacts, although long-term changes to the resource would be possible |

**Table 4
National and New Jersey Ambient Air Quality Standards**

| Pollutant | Standard | Averaging Period | New Jersey (a) | | National (b) | |
|--|---------------------------|-----------------------------|------------------------------|-------|------------------------------|-----------|
| | | | ($\mu\text{g}/\text{m}^3$) | (ppm) | ($\mu\text{g}/\text{m}^3$) | (ppm) |
| Sulfur Dioxide (SO ₂) | Primary | 24-hour average (c) | 365 | 0.14 | 365 | 0.14 |
| | | 1-hour average (d) | ----- | ----- | 196 | 0.075 |
| | | 12-month arithmetic mean | 80 | 0.03 | 80 | 0.03 |
| | Secondary | 3-hour average (c) | 1300 | 0.50 | 1300 | 0.50 |
| | | 24-hour average | 260 | 0.10 | ----- | ----- |
| | | 12-month arithmetic mean | 60 | 0.02 | ----- | ----- |
| Total Suspended Particulates (TSP) | Primary | 24-hour average | 260 | ----- | ----- | ----- |
| | | 12-month geometric mean | 75 | ----- | ----- | ----- |
| | Secondary | 24-hour average | 150 | ----- | ----- | ----- |
| | | 12-month geometric mean (e) | 60 | ----- | ----- | ----- |
| Inhalable Particulates (PM ₁₀) | Primary and Secondary | 24-hour average (f) | ----- | ----- | 150 | ----- |
| | | Annual arithmetic mean (g) | ----- | ----- | ----- | ----- |
| Fine Particulates (PM _{2.5}) | Primary and Secondary | 24-hour average (h) | ----- | ----- | 35 | ----- |
| | | Annual arithmetic mean (i) | ----- | ----- | 15 | ----- |
| Carbon Monoxide (CO) | Primary and Secondary (j) | 1-hour average | 40,000 | 35 | 40,000 | 35 |
| | | 8-hour average | 10,000 | 9 | 10,000 | 9 |
| Ozone (O ₃) | Primary | Max daily-1 hour average | 235 | 0.12 | ----- | --- (k) |
| | Secondary | 1-hour average | 160 | 0.08 | ----- | ----- |
| | Prim. and Sec. | 8-hour average | ----- | ----- | 150 | 0.075 (l) |
| Nitrogen Dioxide (NO ₂) | Primary | 1-hour average (m) | ----- | ----- | ----- | 0.1 |
| | Prim. and Sec. | 12-month arithmetic mean | 100 | 0.05 | 100 | 0.053 |
| Lead (Pb) | Prim. and Sec. | 3-month average | 1.5 | ----- | 0.15 (n) | ----- |

Notes:

- (a) New Jersey short-term standards are not to be exceeded more than once in any 12-month period.
- (b) National short-term standards are not to be exceeded more than once in a calendar year, unless otherwise noted.
- (c) National standards are block averages rather than moving averages, unless otherwise noted.
- (d) Standard is met when the 3-year average of the 99th percentile of the daily maximum 1-hour average is less than or equal to 0.075 ppm (effective June 2, 2010).
- (e) Intended as a guideline for achieving short-term TSP standard.
- (f) 99th percentile of 24-hour PM₁₀ concentrations in a year, averaged over 3 years
- (g) The previous (1997) PM₁₀ annual National Standard of 50 $\mu\text{g}/\text{m}^3$ was rescinded (effective December 18, 2006).
- (h) 98th percentile of 24-hour PM_{2.5} concentrations in a year, averaged over 3 years. The standard was changed from 65 $\mu\text{g}/\text{m}^3$ to 35 $\mu\text{g}/\text{m}^3$ (effective December 18, 2006).
- (i) Standard is met when the 3-year average of the annual arithmetic mean PM_{2.5} concentrations, from single or multiple community-oriented monitors, is less than or equal to the standard.
- (j) National secondary standards for carbon monoxide were revoked in 1985.
- (k) The previous 1-hour ozone national standard of 0.12 ppm is no longer in effect for most areas, including New Jersey.
- (l) Standard is met when the 3-year average of the 4th highest daily maximum 8-hour average is less than or equal to 0.075 ppm (effective May 27, 2008).
- (m) Standard is met when the 3-year average of the 99th percentile of the daily maximum 1-hour average is less than or equal to 0.1 ppm (effective January 22, 2010).
- (n) The national standard was changed from 1.5 $\mu\text{g}/\text{m}^3$ (quarterly mean) to 0.15 $\mu\text{g}/\text{m}^3$ (3-month rolling average) (effective January 12, 2009).

Table 5
Background Ambient Air Quality Data

| Pollutant | Averaging Period | AAQS (a) | 2010 | | 2011 | | 2012 | | Monitoring Location |

**Table 8
Proposed Alternative – Net Air Quality Benefit
Comparison of Emissions from Proposed On-Site Standby Power System with Utility Grid Emissions**

| Maximum annual electrical output | | 38,000 MWh/yr (a) | | | |
|----------------------------------|---|-------------------|-----------------------------|-------------|------------------------|
| Pollutant | Proposed On-Site Standby Power System (b) | | Electric Utility Grid Power | | Net Benefit tons/yr |
| | lb/MWh | tons/yr | lb/MWh (c) | tons/yr (d) | |
| NO _x | 0.26 | 4.9 | 0.73 | 13.9 | 9.0 |
| SO ₂ | 0.04 | 0.7 | 1.31 | 24.9 | 24.2 |
| GHG (CO ₂ e) | 1252 | 23,788 | 1269 | 24,112 | 323.4 |

Notes:

(a) Maximum annual electric power generation from two 19 MW gas turbines operating 1000 hrs/yr at rated output

(b) Proposed On-Site Standby Power System emissions include turbines and black start generator. Emission rate in lb/MWh is calculated from maximum annual emissions divided by maximum annual electric power output (38,000 MWh).

(c) Annual non-baseload emission rates for New Jersey from EGRID2012 year 2009 data, without correction for line losses

(d) Electric utility annual emissions calculated based on 38,000 MWh/yr

Table 9
Proposed Alternative - Projected Hazardous Air Pollutant (HAP) Emissions
Two Standby Solar Titan 250 Turbine Generators Firing Natural Gas with SCR and Oxidation Catalyst

| On-Site Standby Power System Basis of Design | | Each Turbine | Two Turbines | | | |
|---|--|-------------------------|--|--------------|--------------|---|

| Xylenes | 6.4E-05 (b) | 0.026 | 85% | 3.9E-03 | 3.9 | 2,000 |
| Formaldehyde | 2.9E-03 (e) | 1.2 | 85% | 0.18 | 175 | 400 |

Notes:

- (a) AP-42, Section 3.1 Stationary Gas Turbines (April 2000) indicates oxidation catalyst control efficiency in the range of 85% to 90%.
- (b) Emission Factor Documentation for AP-42, Section 3.1 Stationary Gas Turbines (April 2000); emission factors listed are worst case: average for all engine loads or average for high loads (80% load and higher) only.
- (c) "<" indicates compound was not detected; the emission factor is based on one-half of the detection limit.
- (d) Polycyclic aromatic hydrocarbons (PAHs), also known as polycyclic organic matter (POM)
- (e) EPA 2003. Revised HAP Emission Factors for Stationary Combustion Turbines, OAR-2002-0060, IV-B-09, 8/22/03): 95% Upper Confidence of Data, all engine loads

**Table 10
Proposed Alternative –Risk Screening Worksheet**

**NJDEP DIVISION OF AIR QUALITY RISK SCREENING WORKSHEET
For Long-Term Carcinogenic and Noncarcinogenic Effects and Short-Term Effects**

August 2011

For references for toxicity data (URFs and RfCs), see the lists at www.nj.gov/dep/aqpp/risk.html.

| | |
|-------------------|--|
| Date | 8/15/2013 |
| Facility ID No. | 07349 |
| Activity ID No. | N/A |
| Facility name | PVSC - two 19 MW gas turbines @ 1000 hr/yr |
| Facility location | Newark, NJ |

| | |
|--|-------------------------------------|
| Stack height (a) | 100 ft |
| Distance to property line | 50 ft |
| Annual air impact value, C' | 1.144 (ug/m ³)/(ton/yr) |
| 24-hour air impact value, C' _{st} | 17.6 (ug/m ³)/(lb/hr) |

KEY:

Long-Term Effects

Q = Annual emission rate (in tons per year)
 C = C' x Q = Annual average ambient air concentration
 URF = Unit risk factor (for carcinogenic risk)
 IR = C x URF = Incremental risk (for carcinogen)
 RfC = Reference concentration (for noncarcinogenic effects)
 HQ = C/RfC = Hazard quotient (for noncarcinogenic risk)

Short-Term Effects

Q_h = Hourly emission rate (in pounds per hour)
 C_{st} = C' x Q_h = Short-term average ambient air concentration
 RfC_{st} = Short-term reference concentration (for noncarcinogenic effects)
 HQ_{st} = C_{st}/RfC_{st} = Hazard quotient for short-term noncarcinogenic effects

PVSC - two 19 MW gas turbines @ 1000 hr/yr

| Risk | 1.5E-06 | Index | 1.0 | Hazard Index | 1.0 |

RISK/HAZARD CRITERIA (b)

NOTE:

- * Clean Air Act hazardous air pollutant (HAP)
- ** Clean Air Act hazardous air pollutant, but not listed individually (part of a group)
- *** PAH or POM may be considered to be all benzo(a)pyrene.
- (a) 100 ft is Good Engineering Practice stack height based on building height of 40 feet. The spreadsheet conservatively assumes building downwash and no plume rise.
- (b) NJDEP risk/hazard criteria:
 Incremental Risk (IR) less than or equal to 1E-6 (1 in 1 million) is considered negligible (acceptable); values of 1.5 or less are rounded down to 1.
 Hazard Quotient (HQ) less than or equal to 1 is considered negligible (acceptable); values of 1.5 or less are rounded down to 1.

Table 11
Proposed Alternative - General Conformity Applicability Assessment

| General Conformity De Minimis Emission Thresholds | | | | | | | | | | 50 | 100 | 100 | 100 |

Notes:

All engines are assumed to be Tier 3 diesel engines.

Emission factors and calculations from *Exhaust and Crankcase Emission Factors for Nonroad Engine Modeling - Compression-Ignition*, EPA-420-R-10-018 NR-009d, July 2010.

NONROAD Emission Factor = Zero-hour Steady-State Emission Factor x Transient Activity Factor (TAF) x Deterioration Factor (DF)

HC emission factors include crankcase emissions (2% of exhaust emissions).

Annual Emissions (tons/yr) = Qty x Hrs/Yr (per piece of equipment) x hp x Load Factor x Emission Factor (g/hp-hr) x (1 lb/453.6 g) x (1 ton/2000 lb)

Emissions from wall construction are based on two crews working simultaneously.

All Phases Total Peak Year Annual Emissions = Wall Construction Total Annual Emissions + the larger of Pump Stations Construction Total Annual Emissions or Power Plant Construction Total Annual Emissions (assuming that construction of pump stations and power plant will not occur during the same year).

VOC emissions are assumed to be equal to HC emissions; PM2.5 emissions are assumed to be equal to PM emissions.

TABLE 12
Previously Identified Cultural Resources within One-Half Mile of the Project Site

| Reference # | Site Name | Location | Distance and Direction from Subject Property | SR/NR Status |
|--------------------|--|-------------------------------|---|------------------------|
| 3,135.000 | Passaic Valley Sewerage Commission Newark Bay Outfall Sewerage Works | Doremus and Wilson Avenues | On subject property | SHPO Opinion 1/14/1997 |
| 3,120.000 | Lehigh Valley Railroad Oak Island Yard Historic District | Conrail right-of-way | Immediately south | SHPO Opinion 1/14/1997 |
| 4,420.000 | Pennsylvania Railroad New York Bay Branch Historic District | South of Conrail right-of-way | 1,200 feet south | SHPO Opinion 4/22/2005 |
| 4,186.000 | Newark and Elizabeth Branch of the Central Railroad of New Jersey | West of New Jersey Turnpike | 1,600 feet west | SHPO Opinion 8/30/2000 |

Table 13
Extant Buildings and Structures over 50 Years of Age Associated with The Passaic Valley Sewerage Commission Newark Bay Outfall Sewerage Works Historic District

| Building or Structure | Date Completed | Designer (If Known) / Style | FEMA Determination | Disposition | Location |
|----------------------------------|---|---|--------------------|-------------------------------------|---|
| Passaic Valley Interceptor Sewer | Ca. 1920 | Unknown / N.A. | Contributing | Belowground, in use | Primarily along the Passaic River. Small component in western end of project area |
| Newark Shaft | Before 1924 | William M. Brown, et al. | Contributing | Both above- and belowground, in use | Within and below the Head House |
| Wet Weather Pumping Station | 1924 | Frederick A. Phelps, William M. Brown, et al. / Neo-Classical | Contributing | Aboveground, in use | Western portion of project area |
| Venturi Chamber Building | 1924 | Frederick A. Phelps, William M. Brown, et al. / Neo-Classical | Contributing | Aboveground, not in use | Western portion of project area. |
| Head House | 1924 with significant late-20 th -century exterior modifications | Frederick A. Phelps, William M. Brown, et al. / Neo-Classical | Contributing | Aboveground, in use | Eastern portion of project area |
| Wallington Pumping Station | Ca. 1924 | Frederick A. Phelps, William M. Brown, et al. / Neo-Classical | Contributing | Aboveground, in use | Wallington, New Jersey |
| Yantacaw Pumping Station | Ca. 1924 | Frederick A. Phelps, William M. Brown, et al. / Neo-Classical | Contributing | Aboveground, in use | Clifton, New Jersey |
| Historic Main Conduits | Ca. 1924 | William M. Brown, et al. | Contributing | Belowground, not in use | Between Wet Weather Pump Station and Head House |
| Outfall Tunnel | Ca. 1924 | William M. Brown, et al. | Contributing | In bedrock, underwater, in use | From subject property to Robbins Reef, New York Bay |

Table 13
Extant Buildings and Structures over 50 Years of Age Associated with The Passaic Valley Sewerage Commission Newark Bay Outfall Sewerage Works Historic District

| Building or Structure | Date Completed | Designer (If Known) / Style | FEMA Determination | Disposition | Location |
|---------------------------------|-----------------|---------------------------------------|--------------------|---|---|
| Robbins Reef Diffusor Structure | Ca. 1924 | William M. Brown, et al. | Contributing | Underwater, in use | Robbins Reef, New York Bay |
| Unit 2 Sedimentation Basins | Late 1920s | Unknown | Contributing | Belowground, partially demolished, not in use | Between Wet Weather pumping Station and Head House |
| Unit 3 Sedimentation Basins | Ca. 1936 | Unknown | Contributing | Belowground, partially demolished, not in use | Between Wet Weather pumping Station and Head House |
| Old Sludge Conduits | After 1957 | Various | Non-Contributing | Belowground, not in use | Between Old Sludge Pumping Station and sedimentation basins |
| Old Sludge Pumping Station | Ca. 1958 | Bogert and Childs / Modern-Industrial | Non-Contributing | Aboveground, in use | Eastern portion of project area |
| Old Sludge Storage Tanks* | Ca. 1966 - 1970 | Unknown / N.A. | Non-Contributing | Aboveground, in use | Eastern portion of project area |

*Additional research using aerial imagery was undertaken by FEMA in April 2014 to confirm the construction date of the Old Sludge Storage Tanks. This was completed after PS&S had submitted their Phase IA Cultural Resource Reconnaissance Study, dated December 6, 2013, which dated the construction of the Tanks ca. 1958.

**Table 14
Noise Monitoring Results**

| Monitoring Locations | | Receiving Property Category (a) | Predominant Ambient Noise Influences | Total Sound Level (including offsite ambient/background sound) | | | State/Local Sound Level Standard (d) [dBA] |
|----------------------|---|---------------------------------|---|--|-----------|------------|--|
| ID | Description | | | Leq (b) [dBA] | L90 [dBA] | Lmin [dBA] | |
| NM-1 | West of the facility 33 Rutherford St | Commercial | Truck and car traffic on Rutherford Ave, Turnpike traffic | 71.7 | 61.5 (c) | 58.2 | 65/65 |
| NM-2 | South of proposed on-site standby power system location, near the facility property line adjoining Hess | Industrial | Truck, bus and car traffic on Doremus Ave | 60.3 | 54.5 (c) | 52.8 | NA/75 |
| NM-3 | South of proposed on-site standby power system location, - City of Newark property on south side of Delancey St | Community Service | Heavy truck traffic on Delancey St, freight train | 78.5 | 68.4 | 64.7 (c) | 65/65 |
| NM-4 | Northeast of proposed on-site standby power system location, - north side of Wilson Ave east of Doremus Ave | Industrial | Truck, bus and car traffic on Doremus Ave | 69.2 | 60.5 (c) | 59.1 | NA/75 |
| NM-5 | North of proposed on-site standby power system location, - NJ Transit Bus Garage on north side of Wilson Ave | Commercial | Truck, bus and car traffic on Wilson Ave and Doremus Ave | 72.0 | 61.8 (c) | 58.1 | 65/65 |

Notes:

All sound-level measurements were obtained by a PS&S acoustical professional trained and certified under the New Jersey State Noise Code (N.J.A.C. 7:29) and Rutgers Noise Technical Assistance Center.

Sound-level measurement data was collected on July 18, 2013.

Daytime monitoring was performed between 10:30 AM and 2:00 PM (NJDEP Regulated Daytime Period is 7 AM to 10 PM).

A calibrated Bruel and Kjaer Model 2250 Type I precision sound-level meter equipped with a wind screen and set to the 'slow' measurement speed was used to obtain sound-level data. At the beginning and end of the sound-level monitoring, wind speed, temperature and barometric pressure were recorded, and the meter calibration was verified at the beginning and end of the monitoring event.

(a) Receiving property type as defined in the New Jersey State Noise Code

(b) Leq values over the 15 to 17 minute monitoring periods, to be used as a baseline for evaluating project impacts

(c) Sound level to be compared with standard

(d) New Jersey State Noise Code (N.J.A.C. 7:29)/City of Newark Sound Level Standards are applicable only to noise emitted from a specific facility/activity and do not include background (ambient) noise levels from offsite sources.

Table 15
Estimated Outdoor Construction Noise Levels (dBA)

| Construction Phase | Typical Average Outdoor Noise Levels at Construction Site Boundaries (a) | Estimated Outdoor Construction Noise Levels at Distances from Construction Site Boundary (b,c) | | | | | | | |

| Finishing | 89 | 83 | 77 | 73.5 | 71 | 69 | 67.5 | 63 | 59.5 |

Notes:

(a) Source: USEPA "Noise from Construction Equipment", 1971

(b) Estimated from (a) and approximate distance from site (Greenberg, et al. 1979)

(c) Projected sound levels at the Site boundary will vary with the type and location of the construction activity on the Site. Because construction activities would be carried out at various locations and because these activities change as work progresses, the construction site would have both spatial and temporal noise dimensions. Noise levels at the various receptors will depend on the work activity, the proximity of the work activity (relative location on site/distance to receptor), and existing noise sources (trucks, buses, and other background sources).

| Table 16 Difference in Sound Levels Due to Outdoor Construction Noise Levels (dBA) | | | | | | | | | | |
|--|---|---|--------|--------|--------|----------|--------|----------|---------|--|
| Construction Phase | Maximum Difference in Sound Level Due to Outdoor Noise Levels at Construction Site Boundaries | Maximum Difference in Sound Level Due to Outdoor Construction Noise Levels at Distances from Construction Site Boundary | | | | | | | | |
| | | 100 ft | 200 ft | 300 ft | 400 ft | 500 ft | 600 ft | 1000 ft | 1500 ft | |
| | (dBA) | (dBA) | (dBA) | (dBA) | (dBA) | (dBA) | (dBA) | (dBA) | (dBA) | |
| Excavation | 29 | 23 | 17 | 13.5 | 11 | 9 | 7.5 | 3 | - | |
| Pile Driving | 41 | 35 | 29 | 25.5 | 23 | 21 | 19.5 | 15 | 11.5 | |
| Foundation | 17 | 11 | 5 | 1.5 | - | - | - | - | - | |
| Erection | 24 | 18 | 12 | 8.5 | 6 | 4 | 2.5 | - | - | |
| Finishing | 29 | 23 | 17 | 13.5 | 11 | 9 | 7.5 | 3 | - | |
| Existing Sound Levels (a) | | 60 to 72 | | | | 60 to 79 | | 60 to 72 | | |
| Notes: | | | | | | | | | | |
| (a) Existing Daytime Sound Levels [Leq(1)] based on field measurements | | | | | | | | | | |
| (b) Refer to Table N-2 for "Estimated Outdoor Construction Noise Levels at Distances from Site Boundary" | | | | | | | | | | |
| (c) Shaded area indicates no difference in sound level due to outdoor construction noise | | | | | | | | | | |

Table 17
Proposed Alternative - Sound Model Inputs
2 Solar Titan 250 Turbine Generators in Operation (1 Turbine Standby)

| Sound Source | Source Sound Pressure Level | Source Height Above Grade |
|---|--|---|
| Combustion exhaust with silencer (each of 2) | 73.6 dBA at 50 feet | 100 feet |
| Combustion air inlet with silencer (each of 2) | 82 dBA at 50 feet | 29 feet (louvers on east side of building) |
| Unenclosed package (mechanical noise) (each of 2) | 118 dBA at 50 feet (includes 10 dBA noise reduction from noise attenuating louvers) | 8 feet (louvers on west side of building) |
| Building and Floodwalls | | |
| Power system building | Base elevation: 5.9 feet | Building height: 40 feet above grade |
| West floodwall | Base elevation: 5.9 feet | Top of wall elevation 17 feet |
| East floodwall | Base elevation: 5.9 feet | Top of wall elevation 19 feet |

Table 18
Proposed Alternative - Modeled Noise Impacts
Two Solar Titan 250 Turbine Generators Operating

| Noise Impact Receptor | Modeled Noise Impact [dBA] | State/Local Sound Level Standard [dBA] (a) | Representative Noise Monitoring Location | Monitored Leq [dBA] (b) | Total Leq [dBA] (c) | Increase in Leq [dBA] |
|--|----------------------------|--|--|-------------------------|---------------------|-----------------------|
| 1 West of the facility 33 Rutherford St | 33.9 | 65/65 | NM-1 | 71.7 | 71.7 | 0.0 |
| 2 South of turbine site Hess property line | 55.3 | NA/75 | NM-2 | 60.3 | 61.5 | 1.2 |
| 3 South of turbine site City of Newark property on south side of Delaney St | 55.2 | 65/65 | NM-3 | 78.5 | 78.5 | 0.0 |
| 4 Northeast of turbine site north side of Wilson Ave east of Doremus Ave | 62.7 | NA/75 | NM-4 | 69.2 | 70.0 | 0.9 |
| 5 North of turbine site NJ Transit Bus Garage north side of Wilson Ave | 60.8 | 65/65 | NM-5 | 72.0 | 72.3 | 0.3 |
| 6 Northwest of turbine site NJ Transit Bus Garage north side of Wilson Ave | 49.2 | 65/65 | NM-5 | 72.0 | 72.0 | 0.0 |
| 7 West of the facility Rutherford St | 37.9 | NA/75 | NM-1 | 71.7 | 71.7 | 0.0 |

Notes:

(a) New Jersey State Noise Code (N.J.A.C. 7:29)/City of Newark Sound Level Standards are applicable only to noise emitted from a specific facility/activity and do not

include background (ambient) noise levels from offsite sources.

(b) Leq values over the 16 to 17 minute monitoring periods, to be used as a baseline for evaluating project impacts

(c) Modeled noise Impact combined with monitored Leq
