

NOTES:
 1) THE FOLLOWING ARE SOME PRELIMINARY REQUIREMENTS FOR THE SUBDIVISION REGULATIONS FOR THE TOWN OF PRATTSVILLE THAT WOULD REQUIRE A WAIVER.

A. DEAD-END STREETS (CUL-DE-SACS): WHERE DEAD-END STREETS ARE DESIGNED TO BE SO PERMANENTLY, THEY SHOULD, IN GENERAL, SHALL TERMINATE IN A CIRCULAR TURN-AROUND HAVING A MINIMUM RIGHT-OF-WAY RADIUS OF 150' WITH A MINIMUM PAVED RADIUS OF 100', UNLESS THE PLANNING BOARD, TOWN SUPERINTENDENT OF HIGHWAYS, TOWN BOARD AND TOWN ENGINEER APPROVE AN ALTERNATE ARRANGEMENT.

B. MINIMUM LOT SIZES SHALL NOT BE LESS THAN TWO AND A HALF (2-1/2) ACRES. ALL SUBDIVISIONS AND LOTS SHALL BE LAID OUT WITH 150' ROAD FRONTAGE, BOUNDARY LINES, ROADS AND BUILDINGS CLEARLY MARKED ON THE PLAT(S) AND IN THE FIELD FOR EASY IDENTIFICATION.

C. BUILDINGS WILL BE AT LEAST 75' FROM THE CENTER OF THE HIGHWAY, AND 25' FROM PROPERTY LINES

2) THIS CONCEPTUAL SKETCH IS BASED ONLY ON INFORMATION AVAILABLE AT THE TIME, AND MAY BE SUBJECT TO CHANGE BASED ON FUTURE STUDIES & ANALYSIS.

3) TOPOGRAPHICAL AND BOUNDARY SURVEYS ARE BY LAMONT ENGINEERING AND WILL NEED TO BE SURVEYED.

4) THIS CONCEPTUAL SKETCH IS BASED ON FLOOD DATA FROM GREEN COUNTY GIS AND ACTUAL FLOOD ELEVATIONS WILL NEED TO BE VERIFIED AND CERTIFIED.
 A. FLOOD PLAIN ELEVATION REQUIREMENTS AS PER ASCE 24-05: STRUCTURES SHALL HAVE THE LOWEST FLOOR (INCLUDING BASEMENTS) ELEVATED TO OR ABOVE THE DESIGN FLOOD ELEVATION (DFE) IN CONFORMANCE WITH THE REQUIREMENTS OF TABLE BELOW. ENCLOSED AREAS USED SOLELY FOR PARKING, BUILDING ACCESS, OR STORAGE THAT COMPLY WITH SECTION 2.6 ARE ALLOWED BELOW ELEVATED BUILDINGS.

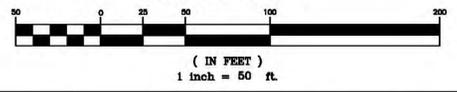

MINIMUM ELEVATION OF THE TOP OF LOWEST FLOOR RELATIVE TO BASE FLOOD ELEVATION (BFE) OR DESIGN FLOOD ELEVATION (DFE) - FLOOD HAZARD AREAS OTHER THAN COASTAL HIGH HAZARD AREAS, COASTAL A ZONES, AND HIGH RISK FLOOD HAZARD AREAS.

STRUCTURE CATEGORY	MINIMUM ELEVATION OF LOWEST FLOOR
I	DFE
II	BFE + 1' OR DFE, WHICHEVER IS HIGHER
III	BFE + 1' OR DFE, WHICHEVER IS HIGHER
IV	BFE + 2' OR DFE, WHICHEVER IS HIGHER

DFE = DESIGN FLOOD ELEVATION
 BFE = BASE FLOOD ELEVATION (100 YEAR)

EXISTING FUCHS PARCEL (74.10-2-13)	3.05 ACRES
EXISTING FUCHS PARCEL (74.10-2-14)	.445 ACRES
EXISTING VERIZON PARCEL (74.10-2-16)	1.137 ACRES
TOTAL ACREAGE	4.63 ACRES

Request for review pursuant to Section 7(a)(2) of the Endangered Species Act of 1973

Declaration #: FEMA 4020 DR NY FEMA 4031 DR NY
Date: November 7, 2013 EMMIE PW# PA-02-NY-4020-PW-08086(1)

Project name: Prattsville Fire Station Construction Project

Applicant: Prattsville Fire District

Location: Main Street/NYS Route 23, Prattsville, NY 12468

County: Greene Latitude: 42.31738 Longitude: -74.432055

FEMA EHP Representative: Alex Cole-Corde, Environmental Protection Specialist

Project description: Fire station construction project: site primarily a meadow, only 10 trees are to be removed for access

See attachment for additional information Reference consultation dated 11/06/13

Threatened (T), Endangered (E), or Candidate (C) species under USFWS jurisdiction with potential to occur in proposed project area:

- | | |
|---|--|
| <input type="checkbox"/> Bog turtle - T | <input type="checkbox"/> Northern wild monkshood - T |
| <input type="checkbox"/> Dwarf wedgemussel - E | <input type="checkbox"/> Piping plover - T |
| <input checked="" type="checkbox"/> Indiana bat - E | <input type="checkbox"/> Sandplain gerardia - E |
| <input type="checkbox"/> Karner blue butterfly - E | <input type="checkbox"/> Seabeach amaranth - T |
| <input type="checkbox"/> New England cottontail - C | <input checked="" type="checkbox"/> Northern long-eared bat - E |
| <input type="checkbox"/> Small whorled pogonia - E | |

FEMA has determined the proposed project:

- may affect _____
- may affect, but is not likely to adversely affect Both the Indiana bat (*Myotis sodalis*) and the Northern long-eared bat (*Myotis septentrionalis*)
- is likely to adversely affect _____
- See attachment for the rationale for the above-listed determination(s) and project description. FEMA recommended conditions: Tree removal shall only be permitted between November 1st and March 31st; avoid removal of standing trees (live or dead) greater than or equal to 4 inches DBH with loose bark (e.g., shagbark and shellbark hickory) if possible; and use bright color flagging or fencing prior to construction activities to designate trees for removal from protected trees

FEMA requests:

- USFWS review and/or concurrence with our Section 7 consultation determination
- Additional assistance to make our Section 7 consultation determination

The U.S. Fish and Wildlife Service:

- concurs with your NLTAA determination(s), no further ESA consultation/coordination required*
- requests additional information

September 24, 2012

Dennis Hull, Fire Commissioner, Chairman
Prattsville Fire District
PO Box 397
Prattsville, NY 12468

Dear Mr. Hull;

After evaluating the substantial damage sustained from Hurricane Irene on August 28, 2011 to the Prattsville Fire District buildings I have determined the following needs for the fire district regarding repairs to your buildings.

According to the Existing Building Code of New York State latest version 2010, the buildings will need to be brought into compliance with the Building Code of New York State and the American Society of Civil Engineers (ASCE 24-5) for Flood Resistant Design and Construction because the damage sustained to the fire district's buildings exceeds 50% of the market value of the structure before the damage occurred.

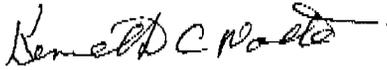

Some of the major requirements that are of concern to repair of the buildings in their current location are as follows:

1. The firehouse would need to be raised 2 feet above the base flood elevation. This is approximately 3 feet up from its current location. A Flood Elevation Certificate will be required to determine the exact height.
2. All structural elements of the facility would need to meet the current Building Code of New York State including Seismic requirements.
3. Special geotechnical considerations will be required for the new foundation design.
4. ADA requirements will need to be addressed to meet all current codes.
5. All mechanical, electrical and plumbing will also need to meet all current code standards.

Therefore, it is my opinion that the building should be razed and a new building built on higher ground out of the flood hazard area.

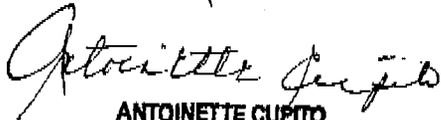

If I could be of further assistance, please do not hesitate to contact me.

Sincerely,

Kenneth Nolte
Building Inspector/Floodplain Manager
Town of Prattsville

Re: Federal Emergency Management Agency
Section 106 Consultation
Prattsville Fire District
Fire Station Reconstruction Project
Town of Prattsville, Greene County, NY 12468
FEMA-4020-DR-NY, Project # PA-02-NY-4020-08086(1)

Dear Chief Hart,

The Federal Emergency Management Agency (FEMA) proposes to provide grant funding to the Prattsville Fire District (Subgrantee) for the reconstruction of a new fire station at a new location on an undeveloped property along the eastside of Main Street/NYS Route 23, Town of Prattsville, Greene County, NY 12468.

This project would require ground disturbance in an archaeologically sensitive area. In accordance with Section 106 of the National Historic Preservation Act of 1966, as amended (16 U.S.C. 470f), and its implementing regulation, 36 Code of Federal Regulations (CFR) Part 800, and as authorized by the U.S. Department of Homeland Security – FEMA, we are initiating consultation with you, Chief Randy Hart, and the Tribal Historic Preservation Officer for the St. Regis Mohawk Tribe, regarding the proposed reconstruction of the new Prattsville Fire Station for the Prattsville Fire District.

The Prattsville Fire Station, located at 14256 Main Street/NYS Route 23, Prattsville, NY received damage when Schoharie Creek overflowed its banks and flooded the Town of Prattsville, during the incident period of August 26, 2011 to September 5, 2011. The fire station is attached to the Masonic Hall; both buildings are owned and maintained by the Prattsville Fire District. The footprint of the fire station is approximately 4,052 square feet and for the Masonic Hall is approximately 1,801 square feet. Both buildings were inundated with four (4) feet of water and mud. Since the flooding incident, portions of the facility are in very poor condition, there are damaged walls and the foundation has settled (stability), and mold is visible in some sections of the building. Repairing the fire station at its existing location was ruled-out due to the extent of the damage and because the local floodplain ordinance requires substantially damaged buildings to flood-proof or elevate to the 100-year floodplain. However, according to 44 CFR

9.4, a fire station meets the definition of a critical facility and in accordance with 44 CFR 9.7, the fire station function and activities are required to be above the 500-year floodplain elevation. Thus, the Prattsville Fire District proposes to reconstruct a new fire station at a new location above the 500-year elevation in order to prevent future damages from a similar event (Figures 1 and 2).

Area of Potential Effect:

The project site would be located in the Town of Prattsville, on an undeveloped 3.5 acres parcel along the eastside of Main Street/NYS Route 23. The site (GPS Coordinates: 42.31738 - 74.432055), would have primary access from Main Street/ NYS Route 23 north of Wright Street and secondary access from Washington Street. The site is located south of Pine Street adjacent to Moore's Mobile Home Park. The new building would be located in the southeastern corner of the parcel above both the 100-year and 500-year floodplains. The parking lot (north from east to west) is partially located in the 500-year floodplain. The primary access point would extend the southern boundary line from the facility to Main Street/NYS Route 23; this access point is located in the 100-year floodplain. However, the secondary access from Washington Street is above the 500-year floodplain.

The area of potential effect (APE) to reconstruct the new fire station at the proposed site would be 3.5 acres. Per the Prattsville Fire District, the existing damaged fire station would be rendered safe and secure. In 2003, there was a non-FEMA funded Phase I B Archaeological Field Reconnaissance Survey conducted by Hartgen Archaeological Associates, Inc. in an area adjacent to the proposed site. Resources were discovered at the Late Archaic Cammer Farm site north of the existing trailer park on Pine Street at the northern extent of the APE. *In situ* artifacts identified there are concentrated at the north end of that site; towards the south end of the site the finds were the result of colluvial redeposition. Tests pits in the immediate area of the proposed access road from Main Street yielded no cultural material and a linear path at the rear of lots on Main Street was eliminated because of previous grading and/or lot improvements. Other sites identified in that report are outside the APE of this project. A finding of no effect on cultural resources was made.

Description of Undertaking:

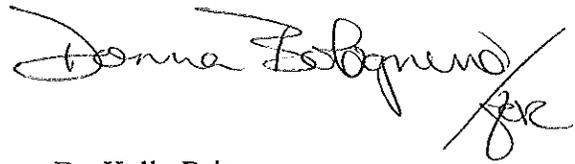

The Prattsville Fire Department intends to construct a 50 feet x 250 feet structure on the undeveloped 3.5 acres site that would accommodate both administrative and firefighting functions and equipment storage. Ancillary features include approximately 85 parking spaces, stormwater management areas, and two (2) site access points from/to Main Street/NYS Route 23 and Washington Street.

If you are aware of any significant prehistoric/historic archaeological resources that may be affected by this project, or have any information regarding the project area, please respond within 30 days or sooner of date of this letter. Please also indicate in your correspondence if there are other sources of information that should be checked, and if there are other parties, tribes, or members of the public you believe should be included in the consultation process. Please respond in writing or email to us (to either email addresses listed below). FEMA's Region II mailing address is:

Re: Federal Emergency Management Agency
Section 106 Consultation
Prattsville Fire District
Fire Station Reconstruction Project
Town of Prattsville, Greene County, NY 12468
FEMA-4020-DR-NY, Project # PA-02-NY-4020-08086(1)

Dear Ms. White,

The Federal Emergency Management Agency (FEMA) proposes to provide grant funding to the Prattsville Fire District (Subgrantee) for the reconstruction of a new fire station at a new location on an undeveloped property along the eastside of Main Street/NYS Route 23, Town of Prattsville, Greene County, NY 12468.

This project would require ground disturbance in an archaeologically sensitive area. In accordance with Section 106 of the National Historic Preservation Act of 1966, as amended (16 U.S.C. 470f), and its implementing regulation, 36 Code of Federal Regulations (CFR) Part 800, and as authorized by the U.S. Department of Homeland Security – FEMA, we are initiating consultation with you, the Tribal Historic Preservation Officer for the Stockbridge-Munsee Community Band of Mohicans, regarding the proposed reconstruction of the new Prattsville Fire Station for the Prattsville Fire District.

The Prattsville Fire Station, located at 14256 Main Street/NYS Route 23, Prattsville, NY received damage when Schoharie Creek overflowed its banks and flooded the Town of Prattsville, during the incident period of August 26, 2011 to September 5, 2011. The fire station is attached to the Masonic Hall; both buildings are owned and maintained by the Prattsville Fire District. The footprint of the fire station is approximately 4,052 square feet and for the Masonic Hall is approximately 1,801 square feet. Both buildings were inundated with four (4) feet of water and mud. Since the flooding incident, portions of the facility are in very poor condition, there are damaged walls and the foundation has settled (stability), and mold is visible in some sections of the building. Repairing the fire station at its existing location was ruled-out due to the extent of the damage and because the local floodplain ordinance requires substantially damaged

buildings to flood-proof or elevate to the 100-year floodplain. However, according to 44 CFR 9.4, a fire station meets the definition of a critical facility and in accordance with 44 CFR 9.7, the fire station function and activities are required to be above the 500-year floodplain elevation. Thus, the Prattsville Fire District proposes to reconstruct a new fire station at a new location above the 500-year elevation in order to prevent future damages from a similar event (Figures 1 and 2).

Area of Potential Effect:

The project site would be located in the Town of Prattsville, on an undeveloped 3.5 acres parcel along the eastside of Main Street/NYS Route 23. The site (GPS Coordinates: 42.31738 - 74.432055), would have primary access from Main Street/ NYS Route 23 north of Wright Street and secondary access from Washington Street. The site is located south of Pine Street adjacent to Moore's Mobile Home Park. The new building would be located in the southeastern corner of the parcel above both the 100-year and 500-year floodplains. The parking lot (north from east to west) is partially located in the 500-year floodplain. The primary access point would extend the southern boundary line from the facility to Main Street/NYS Route 23; this access point is located in the 100-year floodplain. However, the secondary access from Washington Street is above the 500-year floodplain.

The area of potential effect (APE) to reconstruct the new fire station at the proposed site would be 3.5 acres. Per the Prattsville Fire District, the existing damaged fire station would be rendered safe and secure. In 2003, there was a non-FEMA funded Phase I B Archaeological Field Reconnaissance Survey conducted by Hartgen Archaeological Associates, Inc. in an area adjacent to the proposed site. Resources were discovered at the Late Archaic Cammer Farm site north of the existing trailer park on Pine Street at the northern extent of the APE. *In situ* artifacts identified there are concentrated at the north end of that site; towards the south end of the site the finds were the result of colluvial redeposition. Tests pits in the immediate area of the proposed access road from Main Street yielded no cultural material and a linear path at the rear of lots on Main Street was eliminated because of previous grading and/or lot improvements. Other sites identified in that report are outside the APE of this project. A finding of no effect on cultural resources was made.

Description of Undertaking:

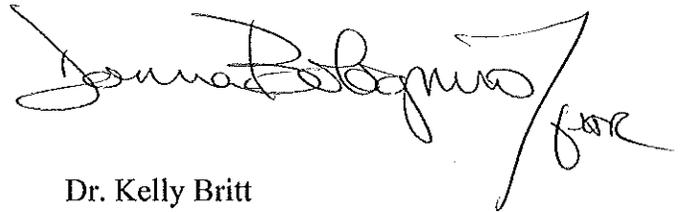

The Prattsville Fire Department intends to construct a 50 feet x 250 feet structure on the undeveloped 3.5 acres site that would accommodate both administrative and firefighting functions and equipment storage. Ancillary features include approximately 85 parking spaces, stormwater management areas, and two (2) site access points from/to Main Street/NYS Route 23 and Washington Street.

Re: Federal Emergency Management Agency
Section 106 Consultation
Prattsville Fire District
Fire Station Reconstruction Project
Town of Prattsville, Greene County, NY 12468
FEMA-4020-DR-NY, Project # PA-02-NY-4020-08086(1)

Dear Dr. Obermeyer,

The Federal Emergency Management Agency (FEMA) proposes to provide grant funding to the Prattsville Fire District (Subgrantee) for the reconstruction of a new fire station at a new location on an undeveloped property along the eastside of Main Street/NYS Route 23, Town of Prattsville, Greene County, NY 12468.

This project would require ground disturbance in an archaeologically sensitive area. In accordance with Section 106 of the National Historic Preservation Act of 1966, as amended (16 U.S.C. 470f), and its implementing regulation, 36 Code of Federal Regulations (CFR) Part 800, and as authorized by the U.S. Department of Homeland Security – FEMA, we are initiating consultation with you, the Tribal Historic Preservation Officer for the Delaware Tribe of Indians regarding the proposed reconstruction of the new Prattsville Fire Station for the Prattsville Fire District.

The Prattsville Fire Station, located at 14256 Main Street/NYS Route 23, Prattsville, NY received damage when Schoharie Creek overflowed its banks and flooded the Town of Prattsville, during the incident period of August 26, 2011 to September 5, 2011. The fire station is attached to the Masonic Hall; both buildings are owned and maintained by the Prattsville Fire District. The footprint of the fire station is approximately 4,052 square feet and for the Masonic Hall is approximately 1,801 square feet. Both buildings were inundated with four (4) feet of water and mud. Since the flooding incident, portions of the facility are in very poor condition, there are damaged walls and the foundation has settled (stability), and mold is visible in some sections of the building. Repairing the fire station at its existing location was ruled-out due to the extent of the damage and because the local floodplain ordinance requires substantially damaged

buildings to flood-proof or elevate to the 100-year floodplain. However, according to 44 CFR 9.4, a fire station meets the definition of a critical facility and in accordance with 44 CFR 9.7, the fire station function and activities are required to be above the 500-year floodplain elevation. Thus, the Prattsville Fire District proposes to reconstruct a new fire station at a new location above the 500-year elevation in order to prevent future damages from a similar event (Figures 1 and 2).

Area of Potential Effect:

The project site would be located in the Town of Prattsville, on an undeveloped 3.5 acres parcel along the eastside of Main Street/NYS Route 23. The site (GPS Coordinates: 42.31738 - 74.432055), would have primary access from Main Street/ NYS Route 23 north of Wright Street and secondary access from Washington Street. The site is located south of Pine Street adjacent to Moore's Mobile Home Park. The new building would be located in the southeastern corner of the parcel above both the 100-year and 500-year floodplains. The parking lot (north from east to west) is partially located in the 500-year floodplain. The primary access point would extend the southern boundary line from the facility to Main Street/NYS Route 23; this access point is located in the 100-year floodplain. However, the secondary access from Washington Street is above the 500-year floodplain.

The area of potential effect (APE) to reconstruct the new fire station at the proposed site would be 3.5 acres. Per the Prattsville Fire District, the existing damaged fire station would be rendered safe and secure. In 2003, there was a non-FEMA funded Phase I B Archaeological Field Reconnaissance Survey conducted by Hartgen Archaeological Associates, Inc. in an area adjacent to the proposed site. Resources were discovered at the Late Archaic Cammer Farm site north of the existing trailer park on Pine Street at the northern extent of the APE. *In situ* artifacts identified there are concentrated at the north end of that site; towards the south end of the site the finds were the result of colluvial redeposition. Tests pits in the immediate area of the proposed access road from Main Street yielded no cultural material and a linear path at the rear of lots on Main Street was eliminated because of previous grading and/or lot improvements. Other sites identified in that report are outside the APE of this project. A finding of no effect on cultural resources was made.

Description of Undertaking:

The Prattsville Fire Department intends to construct a 50 feet x 250 feet structure on the undeveloped 3.5 acres site that would accommodate both administrative and firefighting functions and equipment storage. Ancillary features include approximately 85 parking spaces, stormwater management areas, and two (2) site access points from/to Main Street/NYS Route 23 and Washington Street.

If you are aware of any significant prehistoric/historic archaeological resources that may be affected by this project, or have any information regarding the project area, please respond within 30 days or sooner of date of this letter. Please also indicate in your correspondence if there are other sources of information that should be checked, and if there are other parties, tribes, or members of the public you believe should be included in the consultation process. Please respond in writing or email to us (to either email addresses listed below). FEMA's Region II mailing address is:

Dr. Kelly M. Britt
U.S. Department of Homeland Security/FEMA
26 Federal Plaza, 13th Floor
New York, NY 10278-0002

It is requested that the enclosed information be regarded as secure information and not be released to any external parties without prior consultation with FEMA. We look forward to your comments within 30 days of date of this letter. If you have any questions please contact me at 212-680-8816 or via email at Kelly.Britt@fema.dhs.gov, or Donna Bolognino, who is working directly on this project, at 518-396-3843 or via email at Donna.Bolognino@fema.dhs.gov

Sincerely,

Re: Fire Station Reconstruction Project, Greene Co., FEMA-4020-DR-NY

Dear Donna Bolognino,

Thank you for providing the survey report for the above referenced project. Our review also indicates that there are no religious or culturally significant sites in this project area and we have no objection to the proposed project. We defer comment to your office as well as to the State Historic Preservation Office and/or the State Archaeologist.

However, we ask that if any human remains are accidentally unearthed during the course of the project that you cease development immediately and inform the Delaware Tribe of Indians of the inadvertent discovery.

If you have any questions, feel free to contact this office by phone at (620) 341-6699 or by e-mail at bobermeyer@delawaretribe.org.

Sincerely,

A handwritten signature in cursive script that reads "Brice Obermeyer".
