FEMA Building Science Resources to Assist with Reconstruction after a Hurricane

FEMA has produced numerous publications detailing best practices for natural hazard mitigation associated with hurricane impacts. This flyer summarizes a few of the readily available publications and resources that can be used by homeowners as well as design and construction professionals during reconstruction following hurricanes.

Recovery Advisories
After major disasters, FEMA’s Mitigation Assessment Teams (MATs) often conduct forensic investigations of building performance and publish the results in various publications. One subset of these publications is Recovery Advisories, which present guidance on design, construction, and restoration of buildings in areas subject to the effects of the particular disaster. MATs have published Recovery Advisories for Hurricanes Charley, Ivan, Katrina, Ike, Isaac, and Sandy. Some of the titles are Initial Restoration for Flooded Buildings, The ABC’s of Returning to Flooded Buildings, Designing for Flood Levels Above the BFE, Siding Installation in High-Wind Regions, and Asphalt Shingle Roofing for High-Wind Regions. All Recovery Advisories are available at https://www.fema.gov/th/media-library/collections/24.

Technical Bulletins provide guidance on complying with the minimum building performance requirements of the National Flood Insurance Program (NFIP). NFIP regulations are contained in Title 44 of the Code of Federal Regulations Section 60.3. FEMA has published 11 Technical Bulletins, and titles include Openings in Foundation Walls and Walls of Enclosures, Non-Residential Floodproofing Requirements, and Certifications to Free-of-Obstruction Requirements. All Technical Bulletins are available at https://www.fema.gov/th/media-library/collections/4.

FEMA P-499, Home Builder’s Guide to Coastal Construction Fact Sheets, provides technical guidance on constructing residential buildings in coastal environments. The information is aimed at improving building performance in coastal areas that are subject to flood and wind forces. The 37 fact sheets contain information on planning, foundations, load paths, wall systems, openings, roofing, attachments, and repairs. FEMA P-499 is available at https://www.fema.gov/media-library/assets/documents/6131.
FEMA P-312, Homeowner’s Guide to Retrofitting: Six Ways to Protect Your Home from Flooding, is a guide for homeowners who want to know how to protect their homes from flooding. The guide provides clear information and straightforward guidance about flood mitigation options. Floodproofing methods are explained, including how they meet particular needs. The guide is written for people with little or no experience in flood protection or construction. FEMA P-312 is available at https://www.fema.gov/media-library/assets/documents/480.

FEMA P-348, Protecting Building Utilities from Flood Damage, contains the design and construction requirements for utility systems in residential and non-residential structures in flood-prone areas that must be met to comply with NFIP floodplain management requirements. The publication provides guidance on designing and constructing building utility systems so that the buildings are fully operational and can be re-occupied as soon as electricity, sewer, and water have been restored. FEMA P-348 is available at https://www.fema.gov/media-library/assets/documents/3729.

Other Resources

FEMA’s Building Science Branch has produced numerous publications on the impacts of hurricanes—including coastal foundation design and construction, retrofitting residential buildings for wind hazards, and a design guide for critical facilities prone to hurricanes. The list of publications is available in the FEMA P-787, Catalog of FEMA Building Science Branch Publications and Training Courses (https://www.fema.gov/media-library/assets/documents/12909). The Building Science Branch website (http://www.fema.gov/building-science) has links to additional resources for homeowners, local and government officials, engineers, and designers. Notable resources are the Substantial Damage Estimator software, Protecting Your Property or Business from Flooding and Protecting Your Property or Business from High Winds (http://www.fema.gov/protect-your-property-or-business-disaster), and FEMA’s Quick Reference Guide: Comparison of Select NFIP and Building Code Requirements for Special Flood Hazard Areas. This guide highlights the similarities and the differences between NFIP minimum requirements and the requirements of the International Codes and American Society of Civil Engineers. These resources are available through the FEMA Resource and Document Library at https://www.fema.gov/resource-document-library. FEMA also has building code resources that include Flood Resistant and Wind Provisions of the International Code Series, Highlights of ASCE 24 Flood Resistant Design and Construction, and Reducing Flood Losses Through the International Codes. The FEMA building code resources can be found at https://www.fema.gov/building-code-resources.
