CHECK-RAS Download Instructions

The CHECK-RAS.exe file has been updated to extract and run with the report generated by HEC-RAS versions 2.2 and above, including the latest version, 4.1.0.

The CHECK-RAS.exe file has been updated to extract and run with the report generated by HEC-RAS versions 2.2 and above, including the latest version, 4.1.0.

Note: If you already have a previous version of CHECK-RAS installed on your computer you must uninstall it before proceeding.

Download the provided CHECK-RAS Version 1.4 set-up zip file (date modified 9/30/2010) and save to a local directory on your computer. Extract the file. Double click on the setup.exe file and follow the on-screen directions to install the program. The current version of CHECK-RAS in use is 1.4 (date modified 7/30/2008) and is compatible with Windows operating systems.

If you are adding a new version of the HEC-RAS program, follow the directions in the Run HEC-RAS and Run CHECK-RAS sections on the New Users page to insert the CHECK-RAS user table into HEC-RAS.

Common data extraction errors in CHECK-RAS can be avoided by selecting the ras.exe file that is used in running the HEC-RAS project from the File drop-down menu/HEC-RAS set-up option in the CHECK-RAS main window. Also from the main window of HEC-RAS, go to View/Profile Summary table and make sure that the "Include Node Names in Table" and "Include Profile Name in Table" are NOT selected from the Options drop-down menu of the Profile Output Table. This must be confirmed prior to generating the report file from the HEC-RAS main window, File/Generate Report.

Note:

FEMA Note: If you already have a previous version of CHECK-RAS installed on your computer you must uninstall it before proceeding.
