

Appendix E – Flood Photos

During the El Paso HWM study, many photos were collected which capture active flooding events or the results of such events across El Paso County and Incorporated Communities. These pictures were gathered to help provide flood water elevation estimates across a broader region of the county than what is covered by the surveyed HWMs noted earlier in the report. The majority of the photos were acquired after a broadcast email was sent out by the City of El Paso requesting any available digital pictures of the flooding. The photos obtained with a locality reference are shown in Appendix E. These photos were collected from El Paso County, City of El Paso, USACE, presentations included in the “Federal Flood Assessment Conference, Recommendations and Proceedings, September 6, 2006” report, and the general public.
