Question 1:

(Last month we asked a question about prioritizing enhancements to existing DMIS functionality. This time we are asking about features not currently included in DMIS.)

How would you prioritize enhancements to **future** functionality? (E.g., resource management, situation reporting, other?)

Question 2:

What types of applications of existing or future functionality would encourage the routine use of DMIS on a daily basis?

Question 3:

In your opinion as an experienced DMIS user, should more control over archived incidents/ records/ alerts be delegated to the user level?

Question 4:

Should regional/national alerts be offered on an opt-in, subscription basis? (As opposed to getting all of them regardless of relevance).

Question 5:

Finally, what could help new COGs implement DMIS more easily? (E.g. default configurations, opening screen, Admin Quick Start material, training, etc.)
