HAZARDOUS MATERIALS INCIDENT NARRATIVE REPORT

Initial: ☒ Supplemental: ☐

AGENCY INCIDENT #:	INCIDENT DATE:	REPORT PREPARED BY:	PERSONNEL #:
07078C06	7/11/2007	D.Barnes	0813

NARRATIVE:

On July 11, 2007 at approximately 1836 hours, I was contacted by the Denver State Patrol Dispatch Center. I was informed of a commercial vehicle accident which resulted in an explosion. I was also told brown sludge was flowing across all the eastbound lanes of traffic on Colorado 70 near milepost 256.5. While en route to the incident, I was told the Foothills Fire Department put water on the brown substance and the substance reacted, causing a brown cloud to rise into the air over the westbound lanes of Colorado 70. I was delayed by several minutes because traffic trapped behind the crash scene was being evacuated westbound in the eastbound lanes.

I arrived on scene at approximately 1910 hours. I spoke with Glen Saraduke, the Foothill Fire Dept. incident commander. He told me the brown material on the ground reacted when they applied water to it. The commercial truck was on fire when they first arrived. I requested the Fire Dept stay out of the material until I could perform a Hazard Classification test on the substances. I asked if they had done any air sampling. Glen Saraduke stated they did not have that equipment on hand.

I then donned structural fire fighting gear and prepared some sample jars to take into the hot zone. I requested the fire department man two hoses. One for fighting a fire if one should reoccur and one for emergency decon.

I entered the hot zone with my SCBA. I also took in my MSA gas detector into the hot zone. My instrument did not show any abnormal readings. Using a spatula and a plastic jar, I took sample of the brown granular material which was covering the roadway. I looked into the cab of the commercial truck which was upside down. The driver's arm was clearly visible. I did not see any signs of life. I then examined paper debris in which the brown substance appeared to be contained prior to the crash. I could not find any marks on the paper bags. I noticed a glass like substance was adhered to most of the bags and surface of the commercial truck. I exited the hot zone and was decon by the fire department.

I returned to my response vehicle and performed a hazard classification test on the sample.

6A072524		07/11/2007	Colorado State Patrol

Describe Accident

Vehicle #1, a tractor/trailer combination with a conventional tractor and flatbed trailer, was eastbound on Colorado 70. Vehicle #1's trailer was loaded with paper bags of a fine powdery substance called drilling mud. Vehicle #1 rotated clockwise off of the left side of the roadway, and the trailer tipped over onto its left side into the ditch on the left side of eastbound Colorado 70, and began to spill its load into the median. The tractor stayed upright for a little ways, rotating further clockwise, before turning over onto its left side. The tractor eventually turned all the way over onto its top, and the trailer, which was now completely emptied, was also on its top. The tractor continued eastbound on its top in the ditch on the left side of eastbound 70. The trailer, which was still attached to the tractor, rotated counterclockwise after striking the embankment, and came to rest across all lanes of eastbound 70. The tractor came to rest on its top facing east in the ditch. Vehicle #1's brakes caught fire just prior to the crash, igniting the now-airborne dry powder, and the ensuing fireball damaged non-contact Vehicle #2 (eastbound), and non-contact Vehicle #2 (westbound). Both non-contact vehicles were driven to rest along Colorado 70.
