

FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA)

FINDING OF NO SIGNIFICANT IMPACT

PROPOSED FIRE STATION

WINFIELD, LINCOLN COUNTY, MISSOURI

The American Recovery and Reinvestment Act of 2009 (Public Law 111-5) provided the Department of Homeland Security with one-time funding for the construction and modification of fire stations. This funding is being administered by the Federal Emergency Management Agency (FEMA) under the Assistance to Firefighters Fire Station Construction (FSC) Grant Program. The FSC provides financial assistance directly to fire departments on a competitive basis to build new or modify existing fire stations in order for departments to enhance their response capability and protect the community they serve from fire and fire-related hazards. The FSC seeks to support organizations lacking the tools and resources necessary to effectively protect the health and safety of the public and their emergency response personnel with respect to fire and all other hazards.

The Winfield-Foley Fire Protection District has applied for FSC funding to construct a new fire station to replace an existing fire station that is obsolete in function due to location, age, configuration, 2008 flood damage, and unable to be upgraded due to physical location in the floodplain. The new fire station will be located at 3931 East Highway 47 within the city limits of Winfield, Missouri. The Winfield-Foley FPD needs this facility to provide effective and timely fire protection and emergency services to an area that has experienced rapid growth of commercial and residential properties and population.

The attached Environmental Assessment (EA) was prepared by the Winfield-Foley Fire Protection District in accordance with the National Environmental Policy Act (NEPA) of 1969, the President's Council on Environmental Quality regulations (40 Code of Federal Regulations Parts 1500-1508) to implement NEPA, and the FEMA regulations (10 Code of Federal Regulations Part 10) to implement NEPA.

The Winfield-Foley Fire Protection District initiated a public involvement process through Public Notice and consultation with other Federal and state agencies.

The proposed project was evaluated for any potential significant adverse impacts to soils, air quality, water quality, wetlands, floodplains, threatened or endangered species, cultural and historic resources, and environmental justice considerations. The project was coordinated with the U.S. Department of Agriculture, Natural Resources Conservation Service, U.S. Department of the Interior, Fish and Wildlife Service, Missouri Department of Conservation, and Missouri Department of Natural Resources, State Historic Preservation Office,

The applicant is responsible for obtaining and complying with all required local, State, and Federal permits and approvals.

FINDING

Based on the EA and in accordance with Presidential Executive Orders 12898 (Environmental Justice), 11990 (Protection of Wetlands), and 11988 (Floodplain Management), FEMA has determined that the proposed action would not have any significant adverse impacts on the human environment. As a result of this FONSI, an Environmental Impact Statement (EIS) will not be prepared and the proposed project may proceed.
