Property Data Fact Sheet

For each property included in the project, the community should complete a Property Site Inventory.

- Record all relevant information that led the community to decide to include each structure in the project, attaching at least three color photographs of the main structure (from different sides).
- Collect specific data regarding the structure and its damage history, including latitude and longitude for each property, to assist FEMA with future tracking of mitigation projects.

Information provided about property to be mitigated by the project includes:

- Property owner(s)
- Project component locations
    o Street names
    o Block numbers
- Buildings/structures
    o Type, size construction
    o Occupancy

For buildings that are used to provide public services, additional information to be collected includes:

- Loss of public services. The estimated dollar value per day for the loss of public services.
- Value of service. A multiplier on the ordinary value of services that applies to services critical to immediate disaster response and recovery.
