Notes:

¹ Range estimated from surveyed, surge-only HWMs. Local wave effects (wave heights and wave runoff) are not included in these elevations.

² Measured in feet relative to the North American Vertical Datum of 1988.

³ Post-Hurricane Katrina Advisory Base Flood Elevations (ABFEs) are based on updated statistical information to develop the estimated 1%-annual-chance (100-year) stillwater elevations (SWELs) plus estimated wave effects. For Hancock County, MS, the advisory SWEL is 20 ft for the Gulf Coast and 18 ft for back-bay areas. See equation below to calculate the ABFE with wave effects for a given site:

$$ABFE = Advisory\ SWEL + Wave\ Height,$$

where Wave Height = $\frac{1}{2}$ Stillwater Flooding Depth (depth measured relative to the ground)
