DRAFT Comprehensive Preparedness Guide (CPG) 101

DIVISION NAME: National Integration Center

ACTION REQUIRED: Review and Provide Recommendations for Content Input

DUE: NLT January 25, 2021

PURPOSE/BACKGROUND:

FEMA is seeking feedback on the recently updated “Comprehensive Preparedness Guide (CPG) 101: Developing and Maintaining Emergency Operations Plans.” CPG 101 provides guidelines on developing emergency operations plans and promotes a common understanding of the fundamentals of community-based, risk-informed planning and decision making to help planners examine a threat or hazard and produce integrated, coordinated and synchronized plans.

The NIC is currently seeking input from whole community partners. This review affords an opportunity to review and provide substantive content recommendations for continued development and refinement of the draft. The results of this review will inform the revision of CPG 101.

As you review the document, consider:

- Identifying areas that may be confusing;
- Providing success stories or best practices; and
- Identifying additional job aids, training opportunities or resources for inclusion.

A comment form is included with the current draft for documenting and providing feedback to the NIC. Please submit feedback forms to NPD-Planning@fema.dhs.gov by Monday, January 25, 2021. FEMA will host a series of 60-minute webinar sessions to discuss changes to the updated CPG 101 and gather feedback from whole community partners. The sessions will include facilitated discussions with stakeholders to help improve the existing draft. For information about the webinars please visit: https://www.fema.gov/emergency-managers/national-preparedness/plan.

Preface

Comprehensive Preparedness Guide (CPG) 101 provides Federal Emergency Management Agency (FEMA) guidance on the fundamentals of planning and developing emergency operations plans (EOPs). CPG 101 shows how EOPs connect to planning efforts in all five areas: prevention, protection, mitigation, response and recovery. Version 3.0 of this guide emphasizes the importance of including the private and nonprofit sectors in planning activities and incorporates lessons learned as well as pertinent new doctrine, policy and laws.

CPG 101 provides methods for planners to:

- Conduct community-based planning to engage the whole community through a planning process that represents the actual population in the community and involves community leaders and the private sector in the planning process;
- Develop plans by identifying and analyzing risk;
- Identify operational assumptions and resource demands;
- Prioritize plans and planning efforts to support the transition from development to execution for any threat or hazard; and
- Integrate and coordinate efforts across all levels of government, the private sector and nonprofit organizations.

CPG 101 incorporates the following concepts from operational planning research and day-to-day experience:

- The planning process and the resulting relationships are just as important as the resulting document;
- Plans are not scripts followed to the letter but are flexible and adaptable to the actual situation; and
- Effective plans convey the goals and objectives of the intended operation and the actions needed to achieve them.

Successful operations occur when organizations know their roles, understand how they fit into the plan and are able to execute the plan.
Comprehensive Preparedness Guide 101

CPG 101 describes the steps to produce an EOP, possible plan structures and components of a base plan and its annexes. Other guides provide detailed information about planning considerations for specific functions, hazards and threats.¹

CPG 101 provides the foundation for state, local, tribal, territorial and insular area emergency planning in the United States.² Planners in other disciplines, organizations and the private sector, as well as other levels of government, may find this guide useful in developing their EOPs.

---

¹ For more information, see FEMA’s Planning Guides resource page at https://www.fema.gov/emergency-managers/national-preparedness/plan.

² Per the Stafford Act, insular areas include Guam, the Commonwealth of the Northern Mariana Islands, American Samoa and the U.S. Virgin Islands. Other statutes or departments and agencies may define the term “insular area” differently.

1. Introduction and Overview

1.1. Purpose

Comprehensive Preparedness Guide (CPG) 101 provides guidelines on developing emergency operations plans (EOPs). It promotes a common understanding of the fundamentals of community-based, risk-informed planning and decision making to help planners examine a threat or hazard and produce integrated, coordinated and synchronized plans. The goal of CPG 101 is to make the planning process routine across all preparedness mission areas in the National Preparedness Goal: prevention, protection, mitigation, response and recovery. This guide helps planners at state, local, tribal, territorial and insular area\(^3\) levels of government in their efforts to develop and maintain viable all-hazards, all-threats EOPs. Accomplished properly, planning provides a methodical way to engage the whole community in thinking through the lifecycle of a potential crisis, determining required capabilities and establishing a framework for roles and responsibilities. It shapes how a community envisions and shares a desired outcome, selects effective ways to achieve it and communicates expected results. Each jurisdiction’s plans should reflect what that community will do to address its specific risks with the unique resources it has or can obtain.

Planners achieve unity of purpose by coordinating and integrating plans across all levels of government, nonprofit organizations, the private sector and individuals and families. This coordination supports the fundamental principle that, in many situations, emergency management and homeland security operations start locally and expand to include other government and private sector resources as the affected jurisdiction requires additional support. Plans should, therefore, communicate vertically among levels of government to confirm a common operational focus. Similarly, plans should foster horizontal communication to help individual department and agency EOPs, as well as the private sector and mutual aid partners, fit into the jurisdiction’s plans and to help each organization understand, accept and prepare to execute its assignments. An integrated planning process synchronizes the sequence and scope of an operation.

A shared planning community increases the likelihood of integration and synchronization, makes planning cycles more efficient and effective and makes plan maintenance easier.

**EOP vs. CEMP**

The term “comprehensive emergency management plan” (CEMP) is sometimes used instead of emergency operations plan. In fact, some jurisdictions may be specifically required, by statute or

\(^3\) Per the Stafford Act, insular areas include Guam, the Commonwealth of the Northern Mariana Islands, American Samoa and the U.S. Virgin Islands. Other statutes or departments and agencies may define the term “insular area” differently.
ordinance, to develop and maintain CEMPs. For the purpose of this guide, EOPs and CEMPs are synonymous.

1.2. Applicability and Scope

This guide provides a context for emergency operations planning in light of other existing plans and describes a universal planning process. Many jurisdictions have already developed EOPs. CPG 101 does not require jurisdictions to revise those plans; however, jurisdictions should consider CPG 101 guidance when updating their EOPs.

Appendix A lists the authorities and references for preparedness planning, including many cited in this document. Additionally, regulatory requirements, laws and ordinances in some jurisdictions may require planners to use specific guidance in developing EOPs and EOP annexes (e.g., the requirements for the Radiological Emergency Preparedness Program). CPG 101 complements such other guidance.

1.3. Supersession

CPG 101 Version 3.0 supersedes CPG 101 Version 2.0, which is rescinded.

1.4. How To Use This Guide

CPG 101 helps both novice and experienced planners navigate the planning process. Used in its entirety, this guide provides information and instruction on the fundamentals of planning and their application. It lays the foundation for planning efforts in Chapter 2, The Basics of Planning, and Chapter 3, Understanding the Planning Environment. With an understanding of these fundamentals, CPG 101 transitions from theory to practice by discussing different plan formats and functions (Chapter 4), the planning process itself (Chapter 5) and the content for EOP base plans (Chapter 6) and EOP annexes (Chapter 7).

1.5. Terminology and Acronyms

Appendix B identifies the acronyms in this guide, and Appendix C provides a glossary of terms.

1.6. Revision Process

FEMA will revise CPG 101, as needed, and issue change pages through the publication distribution system and online through approved sources.

FEMA welcomes recommendations on how to improve CPG 101. Provide recommendations for improving this document to NPD-Planning@fema.dhs.gov, ATTN: CPG 101.
Community members have an essential role and shared responsibility to take appropriate actions to protect themselves, their families and organizations and their properties. Such actions include developing a plan for what to do in case of an emergency. A plan is a set of intended actions through which one expects to achieve a goal. Planning that includes the whole community builds a resilient community.4

This chapter serves as a foundation for the rest of the guide by providing an overview of the basics of planning. It describes how risk-informed, community-based planning supports decision making. This chapter also discusses key planning concepts, effective planning and planning pitfalls.

Planning is fundamental to national preparedness. As a practice, it provides a methodical way to engage the whole community in thinking through the lifecycle of a potential crisis, determining required capabilities and establishing a framework for roles and responsibilities.5 Planning also shapes how a community envisions and shares a desired outcome, selects effective ways to achieve it and communicates the results. Planning is a foundational element of the National Preparedness System and anchors nearly every activity that emergency management partners undertake to prevent, protect against, mitigate, respond to and recover from all threats and hazards.

Applying the following principles to the planning process is key to developing an all-hazards plan for protecting lives, property and the environment:

PLANNING SHOULD BE COMMUNITY-BASED, REPRESENTING THE WHOLE POPULATION AND ITS NEEDS

Building an understanding of the composition of the population is a key part of the planning process. The demographics of the population, including its resources, needs and indicators of resilience, have a profound effect on processes such as evacuation, shelter operations and family reunification.

---

4 The December 2017 National Security Strategy of the United States of America defines resilience as the ability to withstand and recover rapidly from deliberate attacks, accidents, natural disasters, as well as unconventional stresses, shocks, and threats to our economy and democratic system.

What Is Community-Based Planning?

“Community-based planning” is the concept that planning should not only represent the actual population within the community but also should involve the whole community in the planning process. How to engage the whole community in community-based planning is discussed in Chapter 5.

Establishing a community profile will let planners know if courses of action are feasible. For example, if the majority of the resident population does not own cars or if the area has a large transient population (tourists, college students, etc.), then planning efforts should account for greater transportation resource requirements than if the population was predominantly composed of car-owning households. Mass care and shelter operations planning should include considerations for household pets because people may not seek refuge if their pets cannot be accommodated. By fully understanding the composition and requirements of the actual population (including all segments of the community), community-based plans will lead to improved response and recovery activities and, ultimately, overall preparedness.6

PLANNING SHOULD EMPHASIZE CARING FOR PEOPLE WITH DISABILITIES AND INDIVIDUALS WITH ACCESS AND FUNCTIONAL NEEDS, INCLUDING INFANTS AND CHILDREN

State and local governments must comply with Title II of the Americans with Disabilities Act (ADA) in emergency- and disaster-related programs, services and activities.7 The ADA defines disabilities as “a physical or mental impairment that substantially limits one or more major life activities, a person who has a history or record of such an impairment or a person who is perceived by others as having such an impairment.” People with disabilities have certain rights under federal law and may have similar or additional rights under state and local laws. Federal and many state and local laws afford certain rights and protections for service animals, which must be considered in emergency operations planning (e.g., transportation needs, mass care and sheltering operations, reunification).8

“Access and functional needs” is defined more broadly than “disabilities,” but generally refers to individuals who have physical, developmental or intellectual limitations, chronic conditions or

6 “Who is at Risk? Rapid Mapping of Potential Hazard Exposure,” a FEMA Prep Talk given by Dr. Robert Chen, describes how geospatial data can help planners understand community characteristics when developing plans, including EOPs. It is available on FEMA’s YouTube channel at https://www.youtube.com/playlist?list=PL72OwKw_OoiJYKDQwKG7HAgV_qNjL.B.

7 In addition to the ADA, planners must comply with the requirements of Title VI of the Civil Rights Act of 1964, Executive Order 13166, Section 504 of the Rehabilitation Act and other federal, state or local laws, to include anti-discrimination laws.

injuries, limited English proficiency or older adults, children and infants. Appendix D includes a list of common examples (this list is not comprehensive).

Planners should consider concepts of accessibility when developing an EOP (see the callout box below). Federal laws, and applicable state and local laws, require the application of these concepts for people with disabilities as defined by the ADA. Applying some of these concepts may also be required by federal, state and local anti-discrimination laws. Even when not required by law—such as with some populations with access and functional needs—these concepts are useful for emergency operations planning purposes.

Concepts of Accessibility

- **Self Determination**: People with disabilities are most knowledgeable about their own needs.
- **No “One-Size-Fits-All”**: People with disabilities do not all require the same assistance and do not all have the same needs.
- **Equal Opportunity**: People with disabilities must have the same opportunities to benefit from emergency programs, services and activities.
- **Inclusion**: People with disabilities, others with access and functional needs, and communities of diverse linguistic and ethnic backgrounds have the right to participate in, and receive, the benefits of emergency programs, services and activities. Additionally, these individuals should be included in all phases of the planning process, as they have insight and information necessary to provide comprehensive services to their respective communities during emergencies.
- **Integration**: Emergency services, programs and activities must be provided in an integrated setting.
- **Physical Access**: Emergency programs, services and activities must be provided at locations that all people can access, including people with disabilities.
- **Equal Access**: People with disabilities must be able to access and benefit from emergency programs, services and activities equal to the general population.
- **Effective Communication**: People with disabilities must be given timely and accurate information that is comparable in content and detail that is given to the general public.
- **Program Modifications**: People with disabilities must have equal access to emergency programs and services, which may require modifications to rules, policies, practices and procedures.
- **No Charge**: People with disabilities may not be charged to cover the costs of measures necessary to provide equal access and nondiscriminatory treatment.
PLANNING SHOULD ENGAGE THE PRIVATE SECTOR

Businesses, small and large, and other private sector organizations are the heart of a community. Not only are they important economically, but they also provide commodities, such as food and fuel, and critical infrastructure services, such as power, public transportation, communications and healthcare. When disasters and emergencies affect the private sector, they often interrupt key community lifelines. Engaging private sector partners in emergency operations planning helps government planners understand the potential impacts of various hazards and how they affect the community. At the same time, private sector organizations have capabilities, expertise and resources that are essential in helping the community to respond and recover. Engaging private sector partners during planning sets the stage for effective collaboration and coordination when disasters and emergencies occur.

PLANNING MUST INCLUDE ALL STAKEHOLDERS IN THE COMMUNITY

Engaging the whole community in the planning process is essential to effective emergency operations planning. Planning teams must reflect the diversity of the community by including representatives from the jurisdiction’s departments and agencies, civic leaders, businesses and organizations (e.g., civic, social, faith-based, humanitarian, educational, advocacy, professional) who are able to contribute critical perspectives and/or have a role in executing the plan. The demographics of the community help determine who to involve as a jurisdiction constructs a planning team. Including leaders and representatives from across the entire community in planning reinforces the expectation that the community members have a shared responsibility and strengthens the public motivation to conduct planning for themselves, their families and their organizations. Community members may be able to assist in translating messaging and advise as to formats most likely to reach their respective communities. For example, it is essential to incorporate individuals with disabilities or specific access and functional needs, individuals with limited English proficiency and underserved communities, as well as the groups and organizations that support these individuals, in all aspects of the planning process. When the plan reflects and incorporates the views of the individuals and organizations who are assigned tasks within it, these individuals and organizations are more likely to accept and use the plan.

PLANNING SHOULD INCLUDE A LOGICAL AND ANALYTICAL PROBLEM-SOLVING PROCESS TO ADDRESS THE COMPLEXITY AND UNCERTAINTY INHERENT IN POTENTIAL HAZARDS AND THREATS

By following a set of logical steps that include gathering and analyzing information, determining objectives and developing options to achieve the objectives, planning allows a jurisdiction or regional response structure to work through complex situations. Planning helps a jurisdiction identify the resources at its disposal to perform required tasks and achieve desired outcomes/target levels of performance. Using this deliberative process to consider and address the diverse roles,

9 For more information on community lifelines, see https://www.fema.gov/emergency-managers/practitioners/lifelines.
responsibilities, authorities and capabilities of various partner organizations, both vertically and horizontally, improves unity of effort during actual incident response. Rather than concentrating on every detail of how to achieve the objective, an effective plan structures thinking and supports insight, creativity and initiative in the face of an uncertain and fluid environment. While using a prescribed planning process cannot guarantee success, inadequate plans and insufficient planning are proven contributors to failure.

PLANNING SHOULD CONSIDER ALL HAZARDS, RISKS AND THREATS

While the causes of emergencies can vary greatly, many of the effects do not. Planners can address common operational functions in their base plans instead of having unique plans for every type of hazard or threat. For example, floods, wildfires, hazardous materials releases and radiological dispersal devices may lead a jurisdiction to issue an evacuation order and open shelters. Even though each hazard’s characteristics (e.g., speed of onset, size of the affected area) are different, the general tasks for conducting an evacuation and shelter operations are the same. Planning for all threats and hazards when addressing emergency functions helps planners identify common tasks and those responsible for accomplishing the tasks.

PLANNING SHOULD BE FLEXIBLE ENOUGH TO ADDRESS ALL INCIDENTS

Scalable planning solutions are the most likely to be understood and executed properly by the operational personnel who have practice in applying them. Planners can test whether the plan elements are sufficiently flexible by exercising them against scenarios of varying type and magnitude. In some cases, planners may determine that exceptional policies and approaches, such as issuing transportation waivers or redirecting resources, are necessary to respond to and recover from catastrophic incidents. Planners should document these exceptional solutions within plans, along with clear descriptions of the triggers that indicate they are necessary.

PLANS SHOULD CLEARLY IDENTIFY THE MISSION, SUPPORTING GOALS AND DESIRED RESULTS

Plans contribute to unity of effort and consistency of purpose among the partners by defining the overall mission, goals that support it and the end-states that successful action should produce. Other plan elements should be designed and evaluated according to their contributions to accomplishing the mission and achieving the goals and desired results.

PLANNING SHOULD DEPICT THE ANTICIPATED ENVIRONMENT FOR ACTION

This anticipation promotes early understanding of and agreement on planning assumptions and risks, as well as the context for interaction. In situations where a specific hazard has not been experienced, planning provides the opportunity to anticipate conditions and systematically identify potential problems and workable solutions. Planners should review existing EOPs to confirm that current assumptions are still necessary and valid. After-action reports of recent emergency operations and exercises in the jurisdiction are resources to help planners develop a list of lessons learned to address in updating plans.
PLANNING DOES NOT NEED TO START FROM SCRATCH

Planners should take advantage of the experience of other planners as well as existing plans from their own and other jurisdictions. Further, many states publish their own standards, guidance and formats for emergency planning, conduct workshops and training courses and assign their planners to work with local planners. FEMA offers resident, locally presented and independent study emergency planning courses. FEMA also publishes guidance related to planning for specific functions and risks. By participating in this training and reviewing existing emergency or contingency plans, planners can:

- Identify applicable authorities and statutes;
- Gain insight into community risk perceptions;
- Identify organizational arrangements used in the past;
- Identify mutual aid agreements (MAAs) with other jurisdictions;
- Identify private sector, nonprofit and voluntary organizations active in disaster planning that can complement and focus public sector planning;
- Learn how historical planning issues were resolved; and
- Identify preparedness gaps.

PLANNING SHOULD IDENTIFY TASKS, ALLOCATE RESOURCES TO ACCOMPLISH THOSE TASKS AND ESTABLISH ACCOUNTABILITY

Decision makers are responsible for providing planners with clearly established priorities and adequate resources.

PLANNING SHOULD INCLUDE SENIOR OFFICIALS THROUGHOUT THE PROCESS TO OBTAIN BOTH UNDERSTANDING AND APPROVAL

Potential planning team members have many day-to-day concerns but should consider emergency planning a high priority and commit to their planning team responsibilities. Senior official buy-in helps the planning process meet requirements of time, planning horizons, simplicity and level of detail. Involving decision-makers in the planning process almost always results in a stronger end-product. Planners should help senior officials understand that planning is an iterative, dynamic process that ultimately facilitates senior roles in a crisis by:

- Identifying and sharing the hazard, risk and threat analyses for the jurisdiction;
- Discussing readiness and capability assessments, as well as exercise critiques; and

---

Describing what the government body and the senior officials have to do prior to, during and after an incident to either prevent or minimize the incident’s impact.

Senior officials play an essential role in determining when and which plans should be developed or revised. Additionally, they customarily have the authority to approve the final product in coordination with key stakeholders. By participating throughout the planning process, senior officials better understand how to implement the plan during an incident.

TIME, UNCERTAINTY, RISK AND EXPERIENCE INFLUENCE PLANNING

These factors define the starting point where planners apply appropriate concepts and methods to solve problems. Planning is, therefore, both an art and a science—successful planners draw from operational experience and an understanding of emergency management principles but are also intuitive, creative and able to anticipate the unexpected. While the science and fundamental principles of planning can be learned through training and experience, the art of planning requires an understanding of the dynamic relationships among stakeholders, of special political considerations and of the complexity imposed by the situation. Because this activity involves judgment and the balancing of competing demands, plans should not be overly detailed—to be followed “to the letter”—or so general that they provide insufficient direction. Mastering this balance is the most challenging aspect of becoming a successful planner.

EFFECTIVE PLANS TELL THOSE WITH OPERATIONAL RESPONSIBILITIES WHAT TO DO AND WHY TO DO IT, AND THEY INSTRUCT THOSE OUTSIDE THE JURISDICTION IN HOW TO PROVIDE SUPPORT AND WHAT TO EXPECT

Plans should clearly communicate to operational personnel and support providers what their roles and responsibilities are and how those complement the activities of others. No ambiguity should exist regarding who is responsible for major tasks. This clarity enables personnel to operate as a productive team more effectively, reducing duplication of effort and enhancing the benefits of collaboration.

PLANNING IS FUNDAMENTALLY A PROCESS TO MANAGE RISK

Risk management is a process that defines context; identifies and assesses risks; and analyzes, determines, implements, monitors and evaluates courses of action for managing those risks. Planning allows systematic risk management to reduce or eliminate risks.

PLANNING IS A KEY COMPONENT OF THE PREPAREDNESS SYSTEM

Preparedness is a continuous process of planning, organizing, training, equipping, exercising, evaluating and taking corrective action. Through this process, plans are continuously evaluated and improved. Chapter 3, Understanding the Planning Environment, explores the National Preparedness System in greater depth, explaining its systematic approach to build and sustain the capabilities required to prevent, protect against, mitigate, respond to and recover from all threats and hazards.
2.1.2. Strategic, Operational and Tactical Planning

Planning involves three tiers: strategic, operational and tactical (i.e., incident scene) planning. Strategic planning sets the context and expectations for operational planning, while operational planning provides the framework for tactical planning. All three tiers of planning occur at all levels of government.

- **Strategic plans** provide a framework for guiding emergency management and homeland security activities. This level of planning allows stakeholders to focus on the longer term and articulate, monitor and evaluate efforts to prevent, protect against, mitigate, respond to and recover from all threats and hazards that might affect a jurisdiction or an organization. Elected or appointed officials play an essential role by providing the vision and priorities for the planning process.

- **Operational plans** describe roles and responsibilities, tasks, integration requirements, actions and other expectations of an organization or jurisdiction during actual or potential incidents. These plans may also address the delivery of capabilities in support of steady-state activities. They may include the coordination and integration of activities and resources from other departments, agencies and organizations within a jurisdiction and across the whole community. Operational plans can apply to all threats and hazards and contain both the governing authorities and actions expected by organizations. Operational-level planning products should be flexible, adaptable, integrated with other plans and based on the best available risk assessments.

- **Tactical plans** focus on managing resources such as personnel and equipment that play a direct role in an incident or event. Pre-incident tactical planning, based on existing operational plans, provides the opportunity to pre-identify personnel, equipment and other execution needs. Tactical plans often outline the detailed actions necessary to accomplish goals identified in an operational plan. Planning teams fill identified gaps through various means, such as mutual aid.

These three tiers of planning typically fall into two broad categories: deliberate planning and incident planning.

- **Deliberate plans** are developed under normal, non-emergency conditions over a period of weeks and months and outline a concept of operations (CONOPS) with detailed information on personnel, resources, projected timelines, planning assumptions and risk analysis.

- **Incident plans** are developed in response to incidents or credible threats, with much shorter timelines and an emphasis on adaptability and flexibility to address needs that emerge as the situation evolves.

Planning teams typically modify deliberate plans to create incident plans. As a result, jurisdictions should understand the linkages between deliberate and incident planning and develop strategies to operationalize deliberate plans through incident planning.
Comprehensive and integrated planning can help other levels of government plan their response to an incident within a jurisdiction. By knowing the extent of the jurisdiction’s capability, supporting planners can pre-identify shortfalls and develop pre-scripted resource requests.

### 2.1.3. Planning Approaches

Planners commonly use a combination of approaches in operational planning:

- **Scenario-based planning** starts with building a scenario for a hazard or threat. Then planners analyze the impact of the scenario to determine appropriate courses of action. Planners typically use this approach to develop planning assumptions, primarily for hazard- or threat-specific annexes to a base plan.

- **Function-based planning** identifies the common functions that a jurisdiction should perform during emergencies. Function-based planning defines the function to be performed and some combination of government agencies and departments responsible for its performance as a course of action.

- **Capabilities-based planning** focuses on a jurisdiction’s capacity to take a course of action. Capabilities-based planning answers the question, “Do I have the right mix of training, organizations, plans, people, leadership and management, equipment and facilities to perform a required emergency function?” Some planners view this approach as a combination of scenario- and function-based planning because of its “scenario-to-task-to-capability” focus.

### 2.1.4. Plan Integration

National guidance and consensus standards expect that a jurisdiction coordinates and integrates its plans among all levels of government and with critical infrastructure planning efforts. The National Incident Management System (NIMS) and National Response Framework (NRF) support a tiered approach to operations. They recognize that most incidents start at the local level and, as needs exceed local capability and additional resources and capabilities are required, state, territorial, tribal, regional, federal and private sector assets are applied. This approach means that planners should integrate vertically to provide a common operational focus to all response levels. Similarly, planners at each level should integrate horizontally to fit department and supporting agency plans into their jurisdiction’s CONOPS. Planners should also appropriately integrate the community’s nonprofit and private sector plans and resources.

- **Vertical integration** meshes planning both up and down the various levels of government. It follows the concept that the foundation for operations is at the local level and that support from

---

federal, state, territorial, tribal, regional and private sector entities is layered onto local activities. This means that as a planning team identifies a support requirement from a “higher level” during the planning process, the two levels work together to resolve the situation. Chapter 3, Understanding the Planning Environment, presents a concept for vertical integration.

- **Horizontal integration** incorporates planning across various functions, mission areas, organizations and jurisdictions. Horizontal integration serves two purposes:
  - It integrates operations across a jurisdiction. For example, an agency, department or sector would write its plan or standard operating procedures/standard operating guidelines (SOPs/SOGs) for its role in an evacuation to fit the controlling jurisdiction’s plan for such an evacuation. Horizontal integration allows departments and support agencies to produce plans that meet their internal needs or regulatory requirements and still integrate into the EOP.
  - It confirms that a jurisdiction’s set of plans supports similar sets of plans from neighboring or partner jurisdictions. A jurisdiction’s plan should include information about mission assignments that it executes in conjunction with, in support of or with support from its neighbors or partners.

### Questions to Consider: EOP Approach and Integration

- With what organizations or jurisdictions should the EOP integrate?
- How can the planning team align the EOP with the plans of other organizations?
- Has the team considered organizations or elements of the community outside the typical list of partners and stakeholders, including those that may have differing views?

## 2.1.5. Plan Synchronization

The concept of sequencing creates effective EOPs that are synchronized in time, space and purpose. Three planning concepts help sequence operations: phasing, branches and planning horizons.

- **Phasing.** A phase is a specific part of an operation that is distinctly different from the ones that precede or follow. For example, a set of phases might include routine operations, heightened awareness, mobilization-activation-deployment, incident response and transition to recovery. Planners often use the factors of time, distance, geography, resources and certain events to define phase lengths.

- **Branching.** A branch is an option built into an EOP. For example, a hurricane may affect a certain state by moving up its coast, by moving inland and traveling up a large bay or by taking a more middle track that affects both areas. While many elements of the plan would be the same for all three scenarios, the change in track could affect response activities. Using branching, the
hurricane annex of an EOP would provide options for each major contingency, allowing the planner to anticipate different requirements and courses of action. Planners use branching only for important options and not for every possible variation in the response.

- **Planning horizon.** A planning horizon is a point in time that planners use to focus the planning effort. Because no one can predict when most incidents will occur, planners typically use planning horizons expressed in months to years when developing EOPs. For example, the base components of an EOP may be updated on a two- to three-year cycle, while key annexes may be on a shorter cycle. Since planners develop these plans with little or no specific knowledge of how a future incident will evolve, the plan should describe broad concepts that allow quick and flexible operations. They should enable several courses of action and project potential uses of organizations and resources during those operations. Planners should view plans as living contingency plans; these plans provide the starting point for response operations when an emergency occurs.

### 2.1.6. Common Planning Pitfalls

In developing EOPs, planning teams tend to make several common mistakes. Planners should avoid the following:

- Developing lengthy, overly detailed plans that are not useful in guiding actual operations when incidents occur and that response personnel do not use.
- Failing to account for the whole community's needs.
- Planning exclusively for response by emergency professionals and not factoring in capabilities of the whole community and the desire of individuals and organizations to help.
- Basing plans on inaccurate information and assumptions in general but particularly regarding hazards, risks, resources and capabilities.

To avoid having to learn of a planning pitfall during a response to an emergency or disaster, jurisdictions should exercise their plans to identify these common mistakes, as well as any other gaps.
3. Understanding the Planning Environment

This chapter explains the environment within which planning occurs, outlines the links between different levels of government and describes state, local, tribal and territorial emergency operations planning activities in the context of the National Preparedness System.

3.1. The National Preparedness System

The National Preparedness System describes a systematic approach to build and sustain the capabilities required to prevent, protect against, mitigate, respond to and recover from all threats and hazards. As shown in Figure 1, it contains six components: identifying and assessing risk; estimating the level of capabilities needed to address those risks; building or sustaining the required levels of capability; developing and implementing plans to deliver those capabilities; validating and monitoring progress; and reviewing and updating efforts to promote continuous improvement. The National Preparedness System is grounded within the National Preparedness Goal, which describes 32 core capabilities that are necessary to manage risk and enhance the Nation’s security and resilience. Specifically, the National Preparedness Goal is “a secure and resilient nation with the capabilities required across the whole community to prevent, protect against, mitigate, respond to and recover from the threats and hazards that pose the greatest risk.”

Figure 1: Components of the National Preparedness System
Plans and the process to develop them are important features of each component of the National Preparedness System.

- **Identifying and Assessing Risk:** Understanding the risks faced by a community is essential for building effective EOPs that reflect the range of threats and hazards that may have negative consequences on its people, assets and systems. The outputs from risk assessments inform the range of capabilities needed to respond to incidents.

- **Estimating Capability Requirements:** The results of the risk assessment process can inform estimates of capabilities that a community needs. Through this process, planners use risk assessment outputs to establish planning factors and determine what levels of capability are needed.

- **Building and Sustaining Capabilities:** Planners can compare existing capabilities with capability targets to identify both gaps and strengths. Working together, planners, government officials and elected leaders can develop strategies to allocate resources effectively to build capabilities, address gaps and sustain existing capabilities.

- **Planning to Deliver Capabilities:** Communities and organizations use plans to guide action. These plans need periodic review and updates to address changes over time in risk and capabilities. A range of resources, such as CPG 101, exist to help planners in that regard.

- **Validating Capabilities:** Risk-informed exercise and evaluation activities are important steps to validate EOPs and test incident response capabilities. Training and real-world events also provide opportunities to test and validate plans and capabilities.

- **Reviewing and Updating:** The risks facing communities can change with evolving threats and hazards, aging infrastructure, shifts in population or changes in the natural environment. The planning team should review capabilities, resources and plans—including EOPs—on a regular basis and update them to reflect current risk assessment results and information gathered during the validation process.

### 3.2. National Preparedness Guidance

In coordination with whole community partners, FEMA has developed a suite of national preparedness guidance documents—such as CPG 101—which are grounded in experience and lessons learned in preventing, protecting against, mitigating, responding to and recovering from the threats and hazards that the nation has faced. These documents include the National Incident Management System (NIMS) and the National Planning Frameworks, which collectively describe how...
the Nation conducts integrated support and management activities when responding to all manner of incidents.\textsuperscript{12}

\textbf{3.2.1. The National Incident Management System}

NIMS is a systematic approach that guides all levels of government, nonprofits and the private sector to work together to manage all incidents, regardless of cause, size, location or complexity. It provides a shared vocabulary, systems and processes to successfully deliver the capabilities described in the National Preparedness System. NIMS resource management enables many organizational elements to collaborate and coordinate to systematically manage resources—personnel, teams, facilities, equipment and supplies. Most jurisdictions or organizations do not own and maintain all the resources necessary to address all potential threats and hazards. Therefore, effective resource management includes leveraging each jurisdiction’s resources, engaging private sector resources, involving volunteer organizations and encouraging further development of MAAs.

NIMS defines operational systems, including the Incident Command System (ICS), emergency operations center (EOC) structures and multiagency coordination (MAC) groups, that guide how personnel work together during incidents. As part of NIMS, FEMA developed the National Qualification System, which provides a foundational guideline on personnel resource typing within the NIMS framework, plus supporting tools.\textsuperscript{13} FEMA also crafted NIMS job titles/position qualifications and accompanying position task books, the NIMS Guideline for Mutual Aid and the EOC Skillsets and User Guide.\textsuperscript{14}

FEMA also supports an extensive curriculum of NIMS training. For further information refer to https://www.fema.gov/emergency-managers/nims/implementation-training.

\textbf{3.2.2. The National Planning Frameworks}

The National Preparedness Goal helps organize national preparedness activities and facilitates coordination among public and private partners through five mission areas:

- \textbf{Prevention} consists of the actions necessary to avoid, prevent or stop a threatened or actual act of terrorism.

\textsuperscript{13} Information on the National Qualification System, as well as the NIMS Guideline for Mutual Aid, is available on the NIMS Components page at https://www.fema.gov/emergency-managers/nims/components.

Protection consists of the capabilities necessary to secure the homeland against acts of terrorism and human-caused or natural disasters.

Mitigation encompasses activities providing a critical foundation in the effort to reduce the loss of life and property from natural and/or human-caused disasters.

Response includes action to save lives, stabilize community lifelines, protect property and the environment and meet basic human needs after an incident has occurred.

Recovery encompasses activities necessary to assist communities affected by an incident to recover effectively.

Each of these mission areas has a National Planning Framework associated with it that describes how the whole community works together to achieve the National Preparedness Goal and foster a shared understanding of roles and responsibilities at each level of government and within the private and nonprofit sectors. The NRF is particularly relevant to the development of EOPs; the National Disaster Recovery Framework (NDRF) is also a useful resource that can help planning teams align their response and recovery plans, as appropriate.

3.2.3. The National Response Framework

The NRF is a guide to how the Nation responds to all types of incidents. It is built on scalable, flexible and adaptable concepts identified in NIMS to align key roles and responsibilities across the nation. The NRF describes coordinating structures, as well as key roles and responsibilities for integrating capabilities across the whole community, to support the efforts of governments, the private sector and nonprofits in responding to actual and potential incidents. The NRF also:

- Describes how unity of effort among public and private sectors, as well as nonprofits, helps stabilize community lifelines;
- Describes the steps needed to prepare for delivering the response core capabilities, including capabilities brought through businesses and infrastructure owners and operators in an incident;
- Introduces the community lifelines, which represent services that enable the continuous operation of critical government and business functions and are essential to human health and safety or economic security;

Comprehensive Preparedness Guide 101

- Fosters integration and coordination of activities for response actions; and
- Provides guidance and establishes the foundation for federal interagency emergency operations planning.

STATE, TERRITORIAL, TRIBAL AND INSULAR AREA GOVERNMENT PLANNING

State, territorial, tribal and insular area governments have significant resources of their own, including emergency management and homeland security agencies, police departments, health agencies, transportation agencies, incident management teams, specialized teams and the National Guard. As described in the NRF, the role of a state government during emergency response is to supplement local efforts before, during and after a disaster or emergency. If a state anticipates that its needs may exceed its resources, the governor can request assistance from other states through MAAs (e.g., an Emergency Management Assistance Compact) and/or from the federal government. Under the Robert T. Stafford Disaster and Relief Act (the Stafford Act), federally recognized tribes may request a Presidential emergency or major disaster declaration directly, or they may request assistance under a state request. Federally recognized tribes can request federal assistance for incidents that impact the tribe but do not result in a Stafford Act declaration.

LOCAL GOVERNMENT PLANNING

Resilience begins with prepared individuals and depends on the leadership and engagement of local government, civic leaders and private sector businesses and organizations. Local police, fire, emergency medical services (EMS), emergency management, public health and medical providers, public works and other community agencies are often the first to be notified about a threat or hazard or to respond to an incident. These entities should work with individuals, families and service providers for people with disabilities and others with access and functional needs to enhance their awareness of risk levels and specific threats, develop household emergency plans that include household pets and service animals and prepare emergency supply kits.

CONCEPT OF OPERATIONS

All levels of government, the private sector, nonprofit organizations and individuals should work together toward a shared and effective response. Upon receiving the warning that an incident is likely to occur or has occurred, elements of the NRF may be implemented in a scalable and flexible way to improve response.
The NRF and supporting Response Federal Interagency Operational Plan (FIOP) use 15 Emergency Support Functions (ESFs) to group and describe the kinds of resources and types of federal assistance available to augment state and local response efforts:

- ESF #1—Transportation
- ESF #2—Communications
- ESF #3—Public Works and Engineering
- ESF #4—Firefighting
- ESF #5—Information and Planning
- ESF #6—Mass Care, Emergency Assistance, Temporary Housing and Human Services
- ESF #7—Logistics
- ESF #8—Public Health and Medical Services
- ESF #9—Search and Rescue
- ESF #10—Oil and Hazardous Materials Response
- ESF #11—Agriculture and Natural Resources
- ESF #12—Energy
- ESF #13—Public Safety and Security
- ESF #14—Cross-sector Business and Infrastructure
- ESF #15—External Affairs.

Each ESF has a federal department or agency identified as its coordinator. During response operations, the coordinating agency forms and activates a team that is responsible for working with the appropriate state and local officials to identify unmet resource needs. The team also coordinates the flow of resources and assistance provided by the federal government to meet these needs.

3.2.4. The National Disaster Recovery Framework

The NDRF is a companion to the NRF and describes how the Nation builds, sustains and coordinates disaster recovery capabilities. The NDRF encourages and assists communities to accelerate the recovery process, beginning with pre-disaster preparedness, including coordinating with community partners, mitigating risks, incorporating continuity planning, identifying recovery resources and developing capacity to manage the recovery process effectively through collaborative and inclusive recovery planning. Collaboration across the whole community on recovery planning fosters integration of emergency response, hazard mitigation, resilience and sustainability into the community’s short- and long-term disaster recovery goals.

---

3.3. Relationship Between Federal Plans and State Emergency Operations Plans

Federal plans and state EOPs describe each respective government-level approach to emergency operations. Because these levels of government all provide support to emergency operations conducted at the local level, their plans include similar and overlapping functions.

As indicated in Chapter 2, all levels of government should coordinate plans vertically for a singular operational focus. The goal is to effectively combine federal and state operations through integration and synchronization. Key concepts for a national planning structure—integration and synchronization—serve different but equally important purposes in linking federal plans and state EOPs:

- From the federal perspective, integrated planning helps answer the question of how federal agencies and departments add the right resources at the right time to support state and local operations.
- From the states’ perspectives, integrated planning provides answers to questions about which other organizations to work with and where to obtain resources.

Resilient Communities and Planning

Resilience, broadly defined, is the ability to resist, absorb, recover from or adapt to an adverse occurrence. Engaging the community in the planning process improves community resilience by increasing the understanding of threats and hazards, encouraging participation in the planning process and communicating the expected actions for the community to undertake during an emergency.

At the local and state levels, building resilience through engagement entails knowing the community and its demographics, as well as involving both formal and informal community leadership structures in the planning process. This is true for all levels of government as each level works to address the issues surrounding children and individuals with disabilities, access and functional needs, limited English proficiency and household pets.

Engaging the private sector is essential to the process. Much of the critical infrastructure necessary to communities is owned and operated by the private sector. Connecting the government and the private sector is, therefore, a necessary part of the planning process.

3.3.1. Federal Plans at the National and Regional Levels

The NRF and the Response FIOP serve as the foundation for developing national and regional response plans that implement federal response activities. At the national level, the federal planning structure supports the principles and concepts of the NRF. Staff in FEMA regional offices develop plans to address potential activities and actions taken by regional offices of federal departments and
agencies in support of state and local operations. They also provide the necessary link between the state EOP and the FIOP.

### 3.3.2. State-, Territorial-, Tribal- and Insular Area-Level Plans

Functions at this level focus on actions, such as direction and control, warning, public notification and evacuation, that the state, territorial, tribal or insular area government must take during the initial phase of response operations and that fall outside of the federal response mission.

Because state, territorial, tribal or insular area governments must channel federal assistance provided under the Stafford Act, some choose to mirror the federal ESF structure. Replicating the federal ESFs exactly is not needed. Some governments successfully use a hybrid approach, either by giving the counterparts of federal ESFs extra responsibilities appropriate to the state, territorial, tribal or insular area level or by creating functions in addition to those used by the federal government to address state, territorial, tribal or insular area responsibilities and concerns. The important thing is that the choice of functions fit the state, territorial, tribal or insular area government’s own CONOPS, policies, governmental structure and resource base. That fit is critical, because the EOP describes what the state, territorial, tribal or insular area government does when conducting emergency operations. States should consider local and federal plans in EOP development to build awareness and understanding. State planners should develop plans that best fit their state’s functions but also need to know how the state plan works in concert with local and federal operations.

The state, territorial, tribal or insular area EOP:

- Identifies the departments and agencies designated to perform response and recovery activities and specifies tasks they must accomplish;
- Outlines the assistance available to local jurisdictions during disasters that generate emergency response and recovery needs beyond what the local jurisdiction can satisfy;
- Specifies the direction, control and communications procedures and systems that alert, notify, recall and dispatch emergency response personnel; warn local jurisdictions; protect residents and property; and request aid/support from other jurisdictions and/or the federal government (including the role of the governor’s authorized representative);
- Describes ways to obtain initial situation assessment information from the local jurisdiction(s) directly affected by the disaster or emergency;
- Describes the logistical support for planned operations;
- Provides coordinating instructions and provisions for implementing interstate compacts, as applicable;
- Designates a coordinating officer to work directly with the federal coordinating officer;
Describes how workspace and communication support are provided to the regional liaison officers and other federal teams deployed to the EOC, staging areas or the area directly impacted by the disaster; and

Assists the federal coordinating officer in identifying candidate locations for establishing the joint field office (i.e., the primary federal incident management field structure).

3.3.3. Local-Level Plans

Local EOPs should largely be consistent with state, territorial, tribal or insular area government plans. This level’s functions focus on actions, such as direction and control, warning, public notification and evacuation, that the local government must take during the initial phase of response operations and that fall outside of the state, territorial, tribal or insular area response mission. Local jurisdictions should work with their state, territorial, tribal or insular area leadership to clearly delineate roles, responsibilities and structures as required.

At a minimum, the EOP describes what the local government does when conducting emergency operations. The local EOP:

- Identifies the departments and agencies designated to perform response and recovery activities and specifies tasks they must accomplish;
- Outlines the integration of assistance available to local jurisdictions during disaster situations that generate emergency response and recovery needs beyond what the local jurisdiction can satisfy;
- Specifies the direction, control and communications procedures and systems that alert, notify, recall and dispatch emergency response personnel; warn the public; protect residents and property; and request aid/support from other jurisdictions and/or the federal government (including the role of the governor’s authorized representative);
- Provides coordinating instructions and provisions for implementing MAAs, as applicable; and
- Describes the logistical support for planned operations.
4. Identifying the Right Plan for the Job

This chapter shifts from theory to application by examining the different types of emergency operation plans and how they meet the requirements of a jurisdiction.

4.1. The Emergency Operations Plan

Traditionally, the focus of a jurisdiction’s operational planning effort has been the EOP. EOPs are plans that define the scope of preparedness and emergency management activities necessary for that jurisdiction. This chapter provides examples for jurisdictions to use in developing or updating their EOPs. The structures and concepts are based on an EOP that consists of a base plan or base plan that is supplemented by some number of annexes that typically provide details on specific emergency response functions, such as emergency sheltering, search and rescue and/or unique hazards, such as earthquakes, hazardous materials spills and power failures. The EOP format is very flexible and works well for both conventional and complex emergency operations.

Emergency management involves several kinds of plans, just as it involves several kinds of actions. While many jurisdictions consider the EOP the centerpiece of their planning effort, it is not the only plan that addresses emergency management functions. Other types of plans that support and supplement the EOP are discussed later in this chapter.

A jurisdiction’s EOP is a document that:

- Assigns responsibility to organizations and individuals for carrying out specific actions that exceed routine responsibility at projected times and places during an emergency;
- Explains the pertinent lines of authority and organizational relationships and shows how activities are coordinated to unify response and recovery efforts;
- Describes how people (including unaccompanied minors, individuals with disabilities, others with access and functional needs and individuals with limited English proficiency) and property are protected;
- Identifies personnel, equipment, facilities, supplies and other resources available within the jurisdiction or by agreement with other jurisdictions; and
- Describes how resource requirements are coordinated with neighboring jurisdictions, private sector entities and nonprofit organizations.
An EOP should be flexible enough for use in all emergencies. An EOP describes the purpose of the plan, the situation, assumptions, CONOPS, organization and assignment of responsibilities, administration and logistics, plan development and maintenance and authorities and references.

EOPs typically contain annexes appropriate to the jurisdictions’ organization and operations. EOPs pre-designate a jurisdictional lead agency and/or functional area representatives to the incident command, unified command or multiagency coordination group whenever possible to facilitate responsive and collaborative incident management.

EOPs facilitate incident response and short-term recovery, which sets the stage for long-term recovery. Response actions and some post-disaster recovery issues, such as the rebuilding and placement of temporary housing facilities, are time sensitive. Advance planning makes performing these tasks easier. Jurisdictions, especially those with severe hazards and vulnerabilities, should integrate comprehensive housing and overall recovery planning with their EOPs. While EOPs often cover short-term recovery actions that are natural extensions of response activities, they do not typically detail long-term recovery actions. However, the EOP should address transition to a long-term recovery plan and the deactivation of response assets.

Prioritizing Pre-Disaster Recovery Planning

EOPs generally focus on how jurisdictions respond to incidents. Experience with large emergencies highlights the need for jurisdictions also to anticipate how to recover from the serious and long-term consequences of disasters. Issues such as housing people who are displaced from their homes for long periods of time or rehabilitating the jurisdiction’s economy should be considered before an incident occurs and in the context of incident response plans. Pre-incident recovery plans and EOPs should complement each other. They should be interoperable by using consistent terminology and describing an integrated CONOPS.

FEMA provides extensive guidance for pre-incident recovery planning. For more information, see the National Disaster Recovery Framework and FEMA’s pre-disaster recovery planning guides for state, local and tribal governments.

4.1.1. State, Local, Territorial, Tribal and Insular Area Emergency Operations Plans

In the Nation’s system of emergency management, the local government acts first to address the public’s emergency needs. Depending on the nature and size of the emergency, state, tribal, ...

---

19 Additional information is available on FEMA’s Planning Guides webpage at https://www.fema.gov/emergency-managers/national-preparedness/plan.
territorial, insular area and federal assistance may be provided. Local EOPs focus on the emergency measures that are essential for protecting the public. At the minimum, these measures include issues such as warning, emergency public information, evacuation, shelter, security, emergency medical care and tactical communications.

States, territories, tribal organizations and insular area organizations play three roles: assisting local jurisdictions; responding first to certain emergencies; and working with the federal government when federal assistance is necessary. The state, territorial, tribal or insular area EOP is the framework within which local EOPs are created and through which the federal government becomes involved. As such, this plan should help to mobilize all levels of government in a unified way to safeguard the well-being of their populace. The state, territorial, tribal or insular area EOPs should synchronize and integrate with local and regional plans.

A planning team’s main concern is to include all essential information and instructions in the EOP. FEMA does not recommend a particular format for EOPs. Any format is acceptable if users understand it and can quickly find and apply the information they need when incidents occur. In designing a format for an all-hazards EOP, the planning team should consider several key factors, including organization, progression, consistency, adaptability, compatibility and inclusivity (see the following checklist).

**EOP Formatting Decision Checklist**

- **Organization.** Do the EOP section and subsection titles help users find what they need, or must users sift through information that is not relevant? Can single plan components be revised without forcing a substantial rewrite of the entire EOP?

- **Progression.** In any one section of the EOP, does each element seem to follow from the previous one, or are some items strikingly out of place? Can the reader grasp the rationale for the sequence and scan for the information he or she needs?

- **Consistency.** Does each section of the EOP use the same logical progression of elements, or must the reader reorient himself or herself in each section?

- **Adaptability.** Does the EOP’s organization make its information easy to use during unanticipated situations?

- **Compatibility.** Does the EOP format promote or hinder coordination with other jurisdictions, including the state and/or federal government? Can reformatting the EOP or making a chart of the coordinating relationships (i.e., a crosswalk) solve problems in this area?

- **Inclusivity.** Does the EOP appropriately address the needs of those with disabilities or other access and functional needs?
4.2. Structuring an Emergency Operations Plan

Jurisdictions can plan for effects common to several hazards rather than develop separate plans for each hazard. The planning team identifies the common tasks or functions that participating organizations perform and assigns responsibility for accomplishing each task or function. Because the jurisdiction’s goal is a coordinated and integrated response, all EOP styles should flow from a base plan that outlines the jurisdiction’s overall emergency organization and its policies.

As the planning team begins to develop a new EOP, members evaluate which format is best for their jurisdiction, considering factors such as operational needs, style of government, risk assessment results and jurisdiction size. Form should follow function, in the sense that operational needs should help determine the EOP format a jurisdiction uses (recognizing that some states prescribe an EOP format for use by local governments).

The EOP should reflect how a jurisdiction would actually respond and not institute a separate structure for planning purposes that does not reflect operational reality. One simple indicator of how a jurisdiction’s EOP should be formatted is to review how the jurisdiction’s EOC operates and the configuration of the team in the EOC when it is activated. If the EOC has sections for various functions (e.g., transportation, public safety, energy) with representatives from various departments, agencies and other organizations staffing those functions, a functional EOC is indicated. If, instead, the EOC is organized by departments and agencies (e.g., department of transportation, public works, police), then an EOP organized departmentally is indicated.

Functional format or agency-/department-focused format options reflect different EOP structures used by jurisdictions across the Nation. States and larger municipalities tend to use the functional format, with an emphasis on ESFs as an organizing construct, while local jurisdictions often employ the functional or agency/department formats. New planners can consider these formatting options when beginning to develop an EOP; seasoned planners can use them to validate the effectiveness of existing EOPs.

None of these formats are mandatory to implement NIMS. The planning team may modify them to align the EOP with the jurisdiction’s emergency management strategy, policy, resources and capabilities (within any state requirements).

Questions to Consider: Integrating Incident Response and Recovery

- What organizations or officials lead the jurisdiction’s disaster recovery efforts after a disaster? Are these organizations/officials represented on the EOP team?
- Besides engaging recovery officials, what other steps can the planning team take so that the EOP sets the stage effectively for long-term recovery?
4.2.1. Functional Format

The functional structure is probably the most commonly used EOP format. Traditionally, a functional format has three major sections: the base plan, functional annexes and hazard-specific annexes (see Figure 2).²⁰

---

**FUNCTIONAL EOP FORMAT**

1. **Base Plan**
   - Introductory Material
   - Promulgation Document/Signatures
   - Approval and Implementation
   - Record of Changes
   - Record of Distribution
   - Table of Contents
   - Purpose, Scope, Situation Overview, and Assumptions
   - Purpose
   - Scope
   - Situation Overview
   - Hazard Analysis Summary
   - Capability Assessment
   - Mitigation Overview
   - Planning Assumptions
   - Concept of Operations
   - Organization and Assignment of Responsibilities
   - Direction, Control, and Coordination
   - Information Collection, Analysis, and Dissemination
   - Communications
   - Administration, Finance, and Logistics
   - Plan Development and Maintenance
   - Authorities and References

2. **Functional Annexes**
   [NOTE: Not a complete list; core functions will vary by jurisdiction]
   - Agriculture and Natural Resources
   - Communications
   - Continuity of Government/Operations
   - Damage Assessment
   - Direction, Control, and Coordination
   - Energy
   - External Affairs/Emergency Public Information
   - Financial Management
   - Firefighting
   - Infrastructure Restoration
   - Logistics Management and Resource Support
   - Mass Care, Emergency Assistance, Housing, and Human Services
   - Mutual Aid/Multi-Jurisdictional Coordination
   - Oil and Hazardous Materials Response
   - Population Protection
   - Prevention and Protection
   - Private Sector Coordination
   - Public Health and Medical Services
   - Public Safety and Security
   - Recovery
   - Resource Management
   - Search and Rescue
   - Transportation
   - Volunteer and Donation Management
   - Warning
   - Worker Safety and Health

3. **Hazard-, Threat-, or Incident-Specific Annexes**
   [NOTE: Not a complete list; annexes will vary based on jurisdiction’s hazard analysis]
   - Hurricane/Severe Storm
   - Earthquake
   - Tornado
   - Flood
   - Hazardous Materials Incident
   - Demand Levee/Levee Emergency
   - Radiological Incident
   - Biological Incident
   - Terrorism Incident
   - Cyber Incident

---

²⁰ In this guide, the term “annex” refers to functional, support, hazard-/incident-specific or other supplements to the base plan consistent with the NRF. Some jurisdictions’ plans may use the term “appendix” in the same fashion (e.g., hazard-specific appendix).
The base plan provides an overview of the jurisdiction’s preparedness and response strategies. It describes expected hazards, outlines agency roles and responsibilities and explains how the jurisdiction keeps the plan current.

The functional annexes are individual sections that focus on missions (e.g., communications, damage assessment, private sector coordination). These annexes describe the organizations that support the given function and their actions, roles and responsibilities. They also indicate the resources, capabilities and authorities that each organization brings to the response. Functional annexes describe how the jurisdiction manages the function before, during and after the emergency.

The hazard-, threat- or incident-specific annexes describe the policies, situation, CONOPS and responsibilities for particular hazards, threats or incidents. They explain the procedures that are unique to that annex for a hazard type. For example, the direction and control annex may describe how a local law enforcement’s command post would coordinate its functions; this information would only be in a hazard-, threat- or incident-specific annex if it is different for that hazard, threat or incident. Strategies already outlined in a functional annex should not be repeated in a hazard-specific annex.

The functional EOP format also uses a specific outline to define the elements of each annex. When the format is followed, EOP users can find information in the plan more easily because the same type of information is in the same location. The EOP functional format can flexibly accommodate a wide range of jurisdictional strategies. The planning team can add functional annexes as new functions are identified. Similarly, the team can quickly separate an operational function (e.g., mass care) into two separate annexes (e.g., sheltering and feeding, distribution of emergency supplies). New hazard or threat annexes can be added quickly when new threats or hazards are identified.

EXAMPLE FUNCTIONAL STRUCTURE: USING EMERGENCY SUPPORT FUNCTIONS FROM THE NATIONAL RESPONSE FRAMEWORK

The federal government, most states and some jurisdictions use ESFs to group response resources and capabilities from various departments and agencies. Jurisdictions that use ESFs to coordinate support typically use them to organize EOPs functionally. A functional format using ESFs is similar to a more general functional EOP approach with a base plan supplemented by functional annexes and hazard/threat/incident annexes; the difference is that instead of functional annexes based on generic functions/missions, the annexes are based on ESFs.

Figure 3 shows an example ESF-based EOP format, reflecting the 15 ESFs used by the federal government. While states and other jurisdictions that use ESFs use most of the same ESFs, some have modified the list to meet their needs. Many states, for example, include a Military Support ESF to coordinate the state’s National Guard activities. Examples of other topics addressed in state ESFs include Law Enforcement, Agriculture and Animal Protection and Business and Industry. The EOP format should reflect the ESFs that the jurisdiction uses.
Figure 3: Example Functional EOP Format Based on the NRF and Federal ESFs

This format typically includes the following elements:

- **The base plan** provides an overview of the jurisdiction’s emergency management system. It briefly explains the hazards faced, capabilities, requirements and the jurisdiction’s emergency management structure. It also reviews expected mission execution for each emergency phase and identifies the agencies that have the lead for a given ESF.

- **The federal ESF annexes**, which supplement the NRF, identify the ESF coordinator and the primary and support agencies for each function. ESFs with multiple primary agencies should designate an ESF coordinator to coordinate pre-incident planning. The ESF annexes also describe expected mission execution and identify tasks assigned to members of the ESF, including nonprofit and private sector partners. Note: the example follows the federal ESFs.
Support annexes describe other mechanisms by which support is organized among private sector, nonprofit organizations and government partners. Support annexes typically describe the essential supporting processes and considerations common to most incidents. As examples, the support annexes to the NRF include financial management, international coordination, public affairs, tribal relations, volunteer and donations management and worker safety and health. Recovery support functions from the NDRF could also be reflected in a recovery annex, addressing issues such as community planning and capacity building, economic recovery, health and social services, housing, infrastructure systems and natural and cultural resources.

The hazard-, threat- or incident-specific annexes describe the policies, situation, CONOPS and responsibilities for particular hazards, threats or incidents:

- Policies: Identifies the authorities unique to the incident type, the special actions or declarations that may result and any special policies that may apply.
- Situation: Describes the incident or hazard characteristics and the planning assumptions. It also outlines the management approach for instances when key assumptions do not hold (e.g., how authorities operate if they lose communication with senior decision makers).
- CONOPs: Describes the flow of the emergency management strategy for a mission or set of objectives to reach a desired end-state. It identifies special coordination structures, specialized response teams or resources needed and other considerations unique to the incident or hazard.
- Responsibilities: Identifies the coordinating and cooperating agencies involved in an incident-, hazard- or threat-specific response.

Questions to Consider: If the EOP Does Not Use ESFs

- If the jurisdiction does not use ESFs, can the EOP help to optimize the use of similar resources and capabilities from different organizations?
- Has the jurisdiction identified the organizing constructs that likely government partners use in their EOPs to minimize potential communication challenges when responding to incidents?

4.2.2. Agency-/Department-Focused Format

This format addresses each department’s or agency’s tasks in a separate section. In addition to the base plan, this format includes lead and support agency sections and hazard-specific procedures for the individual agencies (see Figure 4).

#### Figure 4: Agency-/Department-Focused EOP Format

- The **base plan** provides an overview of a jurisdiction’s preparedness and response strategies. It summarizes the basic tasks to prepare for emergencies and disasters and defines how the plan is developed and maintained.

- The **lead and support agency sections** discuss the emergency functions for which individual departments, agencies and nonprofit partners are responsible. Each agency section should refer to other agency sections to coordinate their respective emergency management strategies.

- The **hazard-specific procedures section** addresses the unique preparedness, response and recovery strategies relevant to each department or agency for specific disaster types. The hazard-specific procedures can immediately follow each agency section or be attached as a separate chapter to the plan.

This format allows EOP users to review only their department’s or agency’s procedures without having to review other agencies’ response tasks. The individual sections still reference the unique relationships with other agencies during a disaster; however, they do not contain details on the other departments’ or agencies’ strategies. If needed, users of the plan can refer to the other departments’ or agencies’ sections and review their procedures to understand the bigger picture. The level of detail in each section varies according to the needs of the specific department or agency. Agencies or departments with detailed SOPs/SOGs may not need much information in their portion of the plan, while others may need to provide more details in the EOP.
4.3. Using Planning Templates

Managers and planners, particularly at the local level, recognize that the planning process demands a significant commitment of time, effort and resources. To ease this burden, many planners and jurisdictions use templates to complete their plans. Some states provide templates to their local jurisdictions. Other templates are available through hazard-specific preparedness programs or commercially from private sector vendors. In other cases, planners may use an existing plan from another jurisdiction or organization as a template. Regardless of the source of the template, planning teams should customize these resources to create a tailored plan that reflects their community’s risk profile, governance structures and operational priorities.

Planners must select templates that do not undermine the planning process. For example, “fill-in-the-blank” templates can defeat the socialization, mutual learning and role acceptance that are so important to achieving effective planning and a successful response. The best templates are those that offer a plan format and describe the content that each section might contain, allowing tailoring to the jurisdiction’s geographic, political and social environment. Planners should consider CPG 101 a template because it provides plan formats and content guidance.

When using a planning template, planners should consider whether:

- The resulting plan represents the jurisdiction’s unique hazard and threat situation (the underlying facts and assumptions) and they match those applicable to the jurisdiction;
- The hazard and risk assessments match the jurisdiction’s demographics, infrastructure inventory, probability of hazard occurrence, etc.;
- The template broadly identifies the resources needed to address the problems generated by an emergency or disaster;
- Using the template stifles creativity and flexibility, thereby constraining the development of strategies and tactics needed to solve disaster problems; and
- Using the templates encourages planning “in a vacuum,” by allowing a single individual to “write” the plan.

Planners should evaluate the usefulness of any planning tool (e.g., template, software) used as part of the planning process. Most templates need to be adjusted to meet their jurisdiction’s needs.

Questions to Consider: Using Planning Templates to Develop EOPs

- How similar is the example plan or template to the planning team’s jurisdiction in terms of demographics, risks and hazards, response structures and level and type of government?
4.4. Additional Types of Plans

Emergency operations involve several kinds of plans, just as they involve several kinds of actions. While the EOP is often the centerpiece of emergency planning efforts, it is not the only plan that addresses emergency management or homeland security missions. Other types of plans that support and supplement the EOP include:

- **Incident action plans (IAP)** are iterative operational plans that incident management teams develop prior to each operational period (typically every 12 or 24 hours) during incident response. IAPs list the objectives established by the incident commander or unified command and specify tactics and planned resource utilization during the operational period. Effective EOPs guide and facilitate the development of IAPs during the operational periods immediately following an incident. As situational awareness improves over the hours and days following the incident, planners increasingly rely on ground truth to guide incident planning and operations.

- **Joint operational plans or regional coordination plans** typically involve multiple levels of government to address a specific incident or a special event. Standing plans should be an annex to the related EOPs, while special events plans should be standalone supplements based on the information contained within the related EOPs.

- **Administrative plans** describe policies and procedures to support a governmental endeavor. Typically, they deal less with external work products than with internal processes. Examples include plans for financial management, personnel management, records review and labor relations activities. Such plans are not typically part of EOPs. However, planners should reference administrative plans in the EOP if they apply during emergencies. Planners should make similar references in the EOP for exceptions to normal administrative plans permitted during emergencies.

- **Preparedness plans** address the process for developing and maintaining capabilities for the whole community, both pre- and post-incident. Integrated preparedness plans should address capabilities needed for prevention, protection, mitigation, response and recovery activities. These multiyear plans include the schedule for identifying and meeting training needs based on the expectations created by the EOP; the process and schedule for developing, conducting and evaluating exercises and correcting identified deficiencies; and plans for procuring, retrofitting or building facilities and equipment to withstand the effects of the hazards facing the jurisdiction. Jurisdictions develop integrated preparedness plans through collaborative workshops where participants identify priorities and establish a schedule for preparedness activities.

- **Continuity of operations (COOP) plans** outline essential functions and services to perform and deliver during an incident that disrupts normal operations and the methods by which this occurs. They also describe the process for timely resumption of normal operations once the emergency
has ended. COOP plans address the continued performance and delivery of core capabilities and
critical operations during any potential incident. Continuity of government (COG) is an outcome of
continuity planning and the continuity capabilities that support it. COG planning efforts prepare
jurisdictions to preserve or reconstitute the statutory, constitutional, legislative and
administrative responsibilities and authorities at all levels of government.

- **Recovery plans** developed prior to a disaster help jurisdictions identify needs, develop options,
implement solutions, direct recovery activities and expedite a unified recovery effort. Pre-incident
planning performed in conjunction with community development planning helps establish
recovery priorities, incorporate mitigation strategies in the wake of an incident and identify
options and changes to consider or implement after an incident. Post-incident community
recovery planning integrates the range of complex decisions in the context of the incident and
works as the foundation for allocating resources.

- **Hazard mitigation plans** outline a jurisdiction’s strategy to reduce the loss of life and property by
  lessening the impact of the hazards it faces. The Disaster Mitigation Act of 2000 requires
jurisdictions seeking certain disaster assistance funding to have approved hazard mitigation
plans. Mitigation planning is often a long-term effort and may be part of or tied to the
jurisdiction’s strategic development plan or similar documents. Mitigation planning committees
may differ from operational planning teams in that they include zoning boards, floodplain
managers and individuals with long-term cultural or economic interests. Existing plans for
mitigating hazards are relevant to an EOP, since both originate from a hazard-based analysis and
share similar component requirements.

### 4.4.1. Procedural Documents

Procedural documents describe how to accomplish specific activities. Put simply, plans describe the
“what” and procedures describe the “how.” Planners may prepare procedural documents to reduce
the level of detail in actual plans. The basic criterion is what the audience of this part of the plan
needs to know or have set out as a matter of public record. Information and “how-to” instructions for
individuals or groups should appear in procedural documents. The plan should reference procedural
documents as appropriate.

For many responsibilities outlined in the EOP, assigning the responsibility to an individual (by position
or authority) or organization and specifying the assignee’s accountability is sufficient: to whom the
person reports or with whom the person coordinates. For example, a plan assigning responsibility for
extinguishing fires to the fire department would not detail procedures used at the scene or specify
what fire equipment is most appropriate. In this situation, the EOP would defer to the fire
department’s SOPs/SOGs. However, the plan would describe the relationship between the incident
commander and the organization directing the jurisdictional response to the emergency, of which the
fire in question may be only a part.

Overviews, SOPs/SOGs, field operations guides (FOGs) or handbooks and job aids are common types
of procedural documents. The following bullets summarize each type.
**Overviews** are brief concept summaries of an incident-related function, team or capability.

Overview documents are of two types: explaining general protocols and procedures or specific to a functional team or area.

- Overviews that **explain general protocols and procedures** are the bridge between all functional or hazard-specific planning annexes and procedural documentation. This type of overview could contain an EOC layout, describe activation levels and identify the functions or sections responsible for planning, operational and support activities. An easy way to develop an overview document is to review the assignments and responsibilities outlined in the EOP and reference the procedures developed to fulfill them in the overview.

- Overviews that are **specific to a functional team or area** describe the general responsibilities and tasks of a functional team. This type of overview provides information to supporting personnel to aid in activities related to the function, team or capability summarized by the document. It identifies qualifications to support the team, provides a summary of operational procedures and defines possible missions in greater detail than in plan annexes. As an example, the overview document addressing transportation would describe the purpose of this function, composition of support personnel, requirements for the team or branch and missions that might be required. It might also identify hazards or conditions that determine when missions are assigned. A successful overview document helps orient new arrivals.

**SOPs/SOGs** are complete reference documents that identify the purpose, authorities, duration and details of the preferred method for performing a single function or a number of interrelated functions. SOPs/SOGs often describe processes that evolved institutionally over years or document common practices to capture institutional experience of an organization. SOPs/SOGs are sometimes task-specific (e.g., how to send emergency messages to the public using the Integrated Public Alert and Warning System [IPAWS], sirens or other local mass notification systems). SOPs/SOGs should grow naturally out of responsibilities identified and described in the EOP. Staff members who typically engage in emergency activities should develop the procedures in an SOP/SOG. The planning team works with senior representatives of tasked organizations to make SOPs/SOGs available and confirm that they do not conflict with the EOP or one another.

**Contents of SOPs/SOGs**

SOPs/SOGs may include checklists, call-down rosters, resource listings, maps and charts. They may also describe how to notify staff; obtain and use equipment, supplies and vehicles; obtain mutual aid; report information to organizational work centers and the EOC; and communicate with staff members who are operating from more than one location.

**FOGs or handbooks** are durable pocket or desk guides containing information required to perform specific assignments or functions. FOGs are short-form versions of SOP/SOGs and serve as a resource document. FOGs provide individuals assigned to specific teams, branches or functions with information about the procedures they are likely to perform or portions of an SOP/SOG appropriate for the missions they are likely to complete. When combined with the
overview document, they give an accurate picture of the positions these individuals fill. The FOG or handbook may also include administrative procedures that staff must follow.

- **Job aids** are checklists or other materials that help users perform specific tasks. Examples of job aids include telephone rosters, report templates, software or machine operating instructions and task lists. Job aids are often included to help EOC personnel complete their assigned tasks or to foster consistency. Job aids may also reduce complexity or the opportunity for error in executing a task (e.g., providing a lookup chart of temperature conversions rather than providing a formula for doing the conversion).
5. The Planning Process

This chapter merges information from the first three chapters and describes an approach for operational planning that is consistent with processes already familiar to most planners. The process described here blends concepts from a variety of sources. It applies at all levels of government and allows private and nonprofit organizations to integrate with government planning efforts. It is intentionally flexible, designed to fit the unique risks and capabilities resident in different jurisdictions while also helping them communicate vision, mission, goals and objectives with partner organizations, stakeholders and the whole community. Although individual planners can use this process, it is most effective when used by a planning team.

5.1. Steps in the Planning Process

There are many ways to produce an EOP. The planning process that follows is flexible and allows communities to adapt it to varying characteristics and situations. While not ideal, if time is a constraint, planners can minimize or skip steps to accelerate the process. Small communities can follow only the steps that are appropriate to their size, risks and available planning resources.

Figure 5 depicts steps in the planning process. At each step, jurisdictions should consider the impact of their decisions on training, exercises, equipment and other requirements. Although planning involves a consistent set of activities, the process is not strictly linear and includes iterative cycles of review and collaboration. Outputs from each step lead to greater understanding by the planning team and leadership of key issues and shape the contents of the plan.

Figure 5: Steps in the Planning Process
5.1.1. Step 1: Form a Collaborative Planning Team

Experience and lessons learned indicate that operational planning is best performed by a team. A team or group approach helps organizations define the roles they play during an operation. Case studies and research reinforce this concept; the common thread in successful operations is that participating organizations understood and accepted their roles. In addition, members of the planning team should also understand and accept the roles and contributions of other departments and agencies. A planning team helps build and expand relationships to bring creativity and innovation to planning. This approach helps establish a planning routine, so that processes followed before an incident are the same as those used during and following an incident.

A community benefits from the active participation of all stakeholders. Some tips for assembling the team include the following:

- **Plan ahead.** The planning team should receive plenty of notice about where and when the planning meeting will be held. If time permits, ask the team members to identify time(s) and place(s) that work for them.

- **Provide information about team expectations.** Planners should explain why participating on the planning team is important to the participants’ agencies and to the community itself, showing how contributions lead to more effective operations. In addition, planners should outline budget and other project management concerns early in the process.

- **Ask the senior elected or appointed official or designee to sign the meeting announcement.** A directive from the executive office carries the authority of the senior official and sends a clear signal that the participants are expected to attend and participate and that operational planning is important to the community.

- **Allow flexibility in scheduling after the first meeting.** Not all team members need to attend all meetings. In some cases, task forces or subcommittees can complete the work. When the planning team uses this option, it should provide project guidance (e.g., timeframes, milestones) but let the subcommittee members determine when it is most convenient to meet.

- **Consider using external facilitators.** Third-party facilitators can perform a vital function by keeping the process focused and mediating disagreements.

The key to planning in a group setting is to allow open and frank discussion during the process. Interaction among planners can help elicit a common operational understanding. Individual group members should be encouraged to express objections or doubts. If a planner disagrees with a proposed solution, that planner should also identify what needs to be fixed.

**IDENTIFY CORE PLANNING TEAM**

In most jurisdictions, the emergency manager or homeland security manager is the senior official’s policy advisor for mitigation, response and recovery strategies as well as overall preparedness. The
emergency manager or homeland security manager may also be the prevention and protection advisor, if a law enforcement official or other designated advisor does not fill that role. In these roles, emergency managers or homeland security managers are often responsible for coordinating and developing an EOP, acting as lead planner. This means that the emergency manager provides oversight to a jurisdiction’s planning team. However, other government agencies or departments may have statutory authority and responsibility that overlap or complement this responsibility. For example, law enforcement officials often have the lead in addressing prevention and protection, while public health entities would address unique epidemiological issues.

Hazard mitigation experts are also valuable contributors to the planning team. Mitigation planners are a valuable resource for information concerning hazard analysis, critical facilities and funding availability. Including mitigation promotes continuity throughout emergency planning and helps reduce the number of physical constraints by leveraging resources to address anticipated operational requirements.

Some states also include recovery planners in their emergency management teams. These experts help jurisdictions bridge the transition from response to recovery, focusing on longer-term functions such as community planning and capacity building, economic recovery, health and social services, housing, infrastructure systems and natural and cultural resources.

Building the Planning Team

Even at this early stage, planners should begin thinking about the impact of who is involved in the planning process, as it has a major impact on preparedness and operational requirements. For example, if a jurisdiction has no hazardous materials response capability, planners should consider how to obtain that capability (through agreements) or develop it (through equipment, training, licensing, etc.). Conversely, failure to include groups in planning (such as advocates for those with access or functional needs) leads to mistakes and/or shortfalls in capability and resource requirements.

Operational planning should include input from the jurisdiction’s entire emergency management and homeland security team. Initially, the team should be small; planners from the organizations that usually participate in emergency or homeland security operations should form the core for all planning efforts. As an EOP matures, the core team expands to include other planners.

Jurisdictions that use an agency and department operational structure might use a core team consisting of planners from the following organizations:

- Emergency management;
- Law enforcement;
- Fire services;
- EMS;
- Public health;
- Hospitals and health care facilities;
- Public works;
Transportation;
Housing authority;
Community planning/economic development;
Utility operators;
Education;
Agriculture;
Animal control;
Social services;
Childcare, child welfare and juvenile justice facilities (including courts);
National Guard;
Private sector; and
Civic, social, faith-based, educational, professional, advocacy and other nonprofit organizations (e.g., those that address disability and access and functional needs issues, immigrant and racial/ethnic community concerns, animal welfare and service animals).

Alternatively, jurisdictions using an ESF structure might form a core team of planners from the lead agencies or departments for ESF #4—Firefighting, ESF #5—Information and Planning, ESF #6—Mass Care Emergency Assistance, Temporary Housing and Human Services, ESF #8—Public Health and Medical Services and ESF #13—Public Safety and Security. [Note: These ESF titles are examples.]

Regardless of the core planning team structure, involving executives from member agencies, departments or critical infrastructure operators (where appropriate) is essential. They can speak with authority on policy, provide subject matter expertise and provide accountability as it relates to their agency or department.

Community Lifelines as Planning Tool

One useful tool for planners developing EOPs is the community lifelines construct, which is an objectives-based approach to incident response that prioritizes the rapid stabilization of key functions after a disaster.\(^{21}\) A lifeline enables the continuous operation of critical government and business functions and is essential to human health and safety or economic security—the most fundamental services in the community that, when stabilized, enable all other aspects of society to function. When lifelines are disrupted during an incident, decisive intervention is required to stabilize them. Consequently, accounting for lifelines in the planning process can inform representation on the planning team and the content of EOPs. Although developed to support response planning and operations, community lifelines are relevant across the entire preparedness cycle: protecting lifelines, preventing and mitigating potential impacts to them, and building back stronger during recovery.

\(^{21}\) For more information on community lifelines, see [https://www.fema.gov/emergency-managers/practitioners/lifelines](https://www.fema.gov/emergency-managers/practitioners/lifelines).
ENGAGE THE WHOLE COMMUNITY IN PLANNING

Engaging in community-based planning—that is for the whole community and involves the whole community—is crucial to the success of EOPs. Determining how to engage the community effectively in this planning process is one of the biggest challenges that planners face. This challenge may be caused by misperceptions about a community’s interest in participating in the process, security concerns about involving those outside government or a failure to jointly and adequately define the role of the community in the planning process.

Community leaders have a keen understanding about their community’s needs and capabilities and are valuable stakeholders who can support the planning process. Community-based planning should also include analyzing potential stakeholders, notifying affected groups about opportunities to participate in planning activities and making those planning activities accessible to the entire community (e.g., use of interpreters and translated announcements).

Including individuals with disabilities or specific access and functional needs, individuals with limited English proficiency, underserved communities, and undocumented populations is critical to a community-based planning process. Civic leaders and representatives of community-based organizations are essential to developing a plan that reflects the community. These individuals and organizations are an important resource for validating assumptions about public needs, capabilities, resources and reactions.

Because many planning assumptions and response activities directly impact the public at large, involving the whole community during the planning phase is essential. This involvement should continue during validation and implementation. Potential roles include support to planning teams, public outreach and establishing community emergency response teams (CERTs). Planners can obtain assistance from the local emergency planning committee (LEPC). Pre-established partnerships and relationships are important for leveraging subject matter expertise and resources.

The private sector is an essential component in community engagement. They are often the primary providers of critical services to the public and have unparalleled expertise managing their systems. Businesses and infrastructure owners and operators possess knowledge and resources that can supplement and enhance preparedness, response and recovery efforts organized by public sector partners. Private sector and government missions often overlap. Early coordination with private sector partners enhances information and resource sharing and helps establish common goals and objectives, including working in unison to prevent or mitigate cascading failures across multiple sectors. Government and private sector partners are also instrumental in stabilizing supply chains and distribution networks that safeguard public health and safety and underpin commercial functions in communities. Given the key role that the private sector plays in any disaster, relevant
businesses and infrastructure partners should be included as active participants in preparedness, including developing EOPs and participating in jurisdictional training and exercise programs.

Disasters begin and end locally. After the response is over, the local community lives with the results of decisions made during the incident. Therefore, communities should have a say in how a disaster response occurs. They should also shoulder responsibility for enhancing the community's resilience by helping to continue essential functions and enhancing its recovery before, during and after a disaster. The community may have access to capabilities and resources beyond those available through the traditional government response structure.

FEMA's A Whole Community Approach to Emergency Management: Principles, Themes, and Pathways for Action describes numerous factors that contribute to community resilience and effective emergency management outcomes. Additionally, this guide outlines three principles for establishing a whole community approach to emergency management planning, along with six strategic themes identified through research, discussions and examples provided by emergency management practitioners (see Figure 6). These themes speak to the ways that planners can effectively employ the whole community approach in emergency management and, as such, represent pathways for action to implement the principles.

---

**Figure 6: Strategic Themes for Community-Based Planning**

1. Understand and Meet the Actual Needs of the Whole Community
   - Community engagement can lead to a deeper understanding of the unique and diverse needs of a population, including its demographics, values, norms, community structures, networks and relationships.
   - Knowledge about communities informs an understanding of their real-life safety and sustaining needs and their motivations for participating in emergency management-related activities prior to, during and following an incident.

2. Engage and Empower All Parts of the Community
   - Engaging the whole community and empowering local action positions stakeholders to plan for and meet community needs and strengthen local capacity to deal with the consequences of all threats and hazards.
   - The emergency management team should include diverse community members, social and community service groups and institutions, faith-based and disability groups, academia, professional associations and the private and nonprofit sectors.

3. Strengthen What Works Well in Communities on a Daily Basis
   - A whole community approach to community resilience involves supporting the institutions, assets and networks that already work well and address issues that are important to community members on a daily basis.
   - Existing structures and relationships that are present in the daily lives of individuals, families, businesses and organizations before an incident occurs can be leveraged during and after a disaster strikes.

---

5.1.2. Step 2: Understand the Situation

This step of the planning process is critical to confirming that a jurisdiction’s plans are risk-based, reflect the needs of the population and account for resources that may be required to assist individuals affected by disasters. One initial action is to build a solid understanding of the socio-demographic characteristics of the community and to think critically about how this information can inform EOP development. Community information establishes the foundation that planners use to estimate a population’s support needs following a disaster, such as sheltering, transportation or disability-related accommodations.23 Planners should consult authoritative sources, such as the United States Census Bureau’s American Community Survey (ACS),24 to obtain trusted demographic, economic, social and housing data. Basic geographic information systems (GIS) tools may also be useful to planners in understanding their jurisdiction’s characteristics and composition.25

Also important is the process of identifying critical infrastructure and understanding, at a high level, how it supports core functions in the community. For instance, having a basic understanding of utility services—including where they are located, who owns them, how are they regulated, how the jurisdiction uses them and what they need to remain operational—can allow planners to consider strategies for maintaining or restoring them in a disaster. Another consideration is the private and nonprofit sector partners who are essential for providing goods and services to communities and maintaining employment and tax bases. Information collected during this phase of the planning process may include geospatial data, contact lists and summary information about critical infrastructure, businesses and nonprofits. Additionally, planners may consider using FEMA’s Resilience Analysis and Planning Tool (RAPT), which enables users to analyze socio-demographic, infrastructure and hazard data and consider how this information affects a jurisdiction’s likely needs following different types of disasters.26

Planning teams can integrate this information into an analytic product summarizing key information about the jurisdiction’s socio-demographics, critical infrastructure and industry. This analysis can serve as a shared reference for the planning team, highlighting baseline information about the community, listing useful data sources, illustrating key community features through maps or GIS tools and offering findings that are relevant to understanding risk. This analytic product enhances the planning team’s understanding of community characteristics relevant to EOP development. Its

23 Appendix D includes additional sources for obtaining data about disabled and access and functional needs populations.

24 The ACS page is available on the Census Bureau website at https://www.census.gov/programs-surveys/acs.

25 State, local, tribal, territorial and insular area planners may have access to GIS capabilities within the emergency management department, planning department, or other departments and divisions. When GIS capabilities are not available at the local level, state governments may provide these services.

26 For more information on the RAPT Tool, see https://www.fema.gov/emergency-managers/practitioners/resilience-analysis-and-planning-tool.
utility, and the underlying assumptions for a jurisdiction’s EOP, directly relate to the quality of data, initial stakeholder outreach and analysis conducted in this phase of the planning process.

### Analytic Resources

- FEMA sponsors PrepTalks, an ongoing emergency management education series.\(^{27}\) A 2018 PrepTalk by Dr. Robert Chen, “Who is at Risk? Rapid Mapping of Potential Hazard Exposure,” and its associated materials provide tips and templates on using ACS data to help planners effectively analyze socio-demographic datasets to support planning initiatives.\(^{28}\)
- FEMA’s Technical Assistance Branch can provide guidance and tools related to private sector outreach and data collection. For support, e-mail: FEMA-TARequest@fema.dhs.gov.
- The Cybersecurity and Infrastructure Security Agency has protective security advisors (PSAs) in each state who can help planners understand critical infrastructure operations in their jurisdictions. For more information on PSAs and how to contact them, e-mail: CIOCC.Physical@cisa.dhs.gov.

### UNDERSTAND RISK

Risk is the potential for an unwanted outcome resulting from an incident or occurrence, as determined by its likelihood and the associated consequences.\(^{29}\) Understanding a jurisdiction’s risks helps planners anticipate response and recovery requirements and estimate the likelihood and magnitude of incidents that may occur in their jurisdiction. One method to identify risks is through FEMA’s Threat and Hazard Identification and Risk Assessment and Stakeholder Preparedness Review (THIRA/SPR) processes,\(^{30}\) illustrated in Figure 7. The THIRA/SPR provides guidance on inventorying and categorizing threats and hazards that may impact a jurisdiction; considering the likelihood of occurrence; and detailing context around the consequences for the most likely threats and hazards. The THIRA/SPR sets a strategic foundation for putting the National Preparedness System into action. Completing a THIRA and SPR helps planners assess trends in a jurisdiction’s risk profile and determine whether to modify assumptions or planning factors based on changes related to the occurrence, severity or response requirements for individual or collective jurisdictional risks.

---

\(^{27}\) For information on this series or materials associated with specific sessions, see FEMA’s PrepTalks webpage at [https://www.fema.gov/preptalks](https://www.fema.gov/preptalks).

\(^{28}\) This PrepTalk is available on FEMA’s YouTube channel at [https://www.youtube.com/playlist?list=PL720Kw_OojIiyKDZQwKG7HAgV_qNjbLB](https://www.youtube.com/playlist?list=PL720Kw_OojIiyKDZQwKG7HAgV_qNjbLB).

Many jurisdictions complete a THIRA/SPR as a term and condition of their receipt of certain preparedness grant funding. “Threat and Hazard Identification and Risk Assessment and Stakeholder Preparedness Review Guide: Comprehensive Preparedness Guide (CPG) 201” describes how to complete a risk assessment as part of planning. The process includes:

- **Step 1: Identify Threats and Hazards of Concern:** Based on a combination of experience, forecasting, subject matter expertise and other available resources, develop a list of threats and hazards that could affect the community.

- **Step 2: Give Threats and Hazards Context:** Describe the threats and hazards identified in Step 1, showing how they may affect the community and create challenges in performing the core capabilities. Identify the impacts that a threat or hazard may have on a community.

- **Step 3: Establish Capability Targets:** Using the impacts described in Step 2, determine the level of capability that the community plans to achieve over time to manage the threats and hazards it faces. Using standardized language, create capability targets for each of the core capabilities based on this desired level of capability by identifying impacts, objectives and timeframe metrics.

Communities may decide to adopt parts of this risk assessment process that are most useful.

---

1426 USE THE RESULTS
1427 Risk assessment processes face challenges from incomplete data, partial stakeholder engagement
1428 and the inherent uncertainty in analyzing the likelihood and consequences of different threats and
1429 hazards. Consequently, results are never perfect, and real incidents often present unanticipated
1430 requirements for emergency managers. However, this assessment process is valuable in setting a
1431 baseline understanding for an EOP.
1432 Additionally, risk assessments generate a series of facts and assumptions.
1433 • **Facts** are verified pieces of information, such as laws, regulations, terrain maps, population
1434 statistics, resource inventories and prior occurrences.
1435 • **Assumptions** are pieces information accepted by planners as true in the absence of facts to
1436 allow them to envision expected conditions in an operational environment.
1437 As plans are implemented, planners replace assumptions with facts, adjusting initial expectations
1438 based on operational reality. For example, when producing a flood annex, planners may assume the
1439 location of the water overflow, size of the flood hazard area and speed of the rise in water. If a flood
1440 event does occur, the actual data should inform an update to the assumptions in the plan.
1441 The outcomes of this analysis to understand a community’s situation help planners determine goals
1442 and objectives (Step 3) and identify courses of action to use when developing the plan (Step 4).
1443
1444 **5.1.3. Step 3: Determine Goals and Objectives**
1445
1446 DETERMINE OPERATIONAL PRIORITIES
1447 Operational priorities specify what the responding organizations aim to accomplish to achieve
1448 success in an operation. The senior official may communicate these priorities for the operations
1449 addressed in the plans. Using information from the risk profile developed in the analysis process, the
1450 planning team engages the senior official to establish how the hazard or threat would evolve in the
1451 jurisdiction and what defines a successful outcome for responders, survivors and the community.
1452 Identifying operational priorities begins with the likely intensity for the hazard or threat. The planning
1453 team imagines an incident’s development from prevention and protection efforts (if applicable),
1454 through initial warning (if available) to its impact on the jurisdiction and its generation of specific
1455 consequences (e.g., collapsed buildings, loss of critical services or infrastructure, death, injury,
1456 displacement). These scenarios should be realistic and based on the jurisdiction’s hazard or threat
1457 and its risk data. Planners may use the incidents with the greatest impact on the jurisdiction (i.e.,
1458 worst-case), incidents most likely to occur or an incident constructed from the impacts of a variety of
1459 risks. When building an incident scenario, the planning team identifies the requirements that
1460 determine actions and resources. Planners are looking for requirements generated by the hazard or
1461 threat, by the response and by constraints.
Requirements can be rooted in the hazard or threat under consideration and the effects that incidents can have on the operation of government and business functions that are essential to human health, safety or economic security. They lead to the identification of important functions and fundamental services that communities need to safeguard, stabilize and restore (e.g., safety and security; food, water and shelter; health and medical; power fuel; communications; transportation; hazardous materials) and the capabilities needed to do so.

Some response requirements are common to all operations. An example is the potential need for emergency refueling during a large-scale evacuation. Subsets could include the need to find a site for refueling, identify a fuel supplier, identify a fuel pumping method, control traffic and collect stalled vehicles. Once the requirements are identified, the planning team restates them as operational priorities and affirms those priorities with the senior official.

**SET GOALS AND OBJECTIVES**

Goals and objectives describe the desired outcomes and interim steps to achieve those outcomes. Clearly specifying goals and objectives and having universal buy-in from all partners fosters unity of effort and consistency of purpose among the multiple individuals and organizations involved in executing the plan.

- **Goals** are general statements that describe the intended outcomes. Often expressed as descriptions of the desired end state, goals are what personnel and equipment resources are intended to achieve. Goals help identify when major elements of the response and recovery are complete and when the operation is successful.

- **Objectives** are specific and identifiable actions carried out during the operation. They lead to achieving response goals and determining the actions that participants in the operation should accomplish. Translating these objectives into activities leads to the development of courses of action as well as the capability estimate (see Step 4).

**EOP Objectives and Incident Objectives**

The objectives developed by planners for an EOP should not be confused with incident objectives, which are established by incident commanders (or the unified commands) during actual incident operations as a step in incident action planning.

- EOP objectives are typically fairly general and define what the EOP should achieve.

- Incident objectives identify specifically what the incident commander or unified command wants to achieve during the next one or more operational periods.

Some EOPs or hazard-specific EOP annexes include suggested incident objectives for the initial operational periods that incident commanders or unified commands may use or modify.
5.1.4. Step 4: Develop the Plan

DEVELOP AND ANALYZE COURSES OF ACTION

This step involves generating, comparing and selecting possible solutions for achieving the goals and objectives identified in Step 3. Planners consider the requirements, goals and objectives to develop several response alternatives; essentially asking, “How are we going to accomplish our objectives?” The art and science of planning help determine how many solutions or alternatives to consider; however, always consider at least two options. Developing only one solution may speed the planning process, but it could provide for an inadequate response, leading to damaging effects on the affected population or environment.

When developing courses of action, planners depict how an operation unfolds by building a portrait of the incident’s actions, decision points and participant activities. This process helps planners identify tasks that occur immediately at incident initiation, tasks that are focused mid-incident and tasks that affect long-term operations. The planning team should use tools that help members visualize operational flow, such as a whiteboard, “sticky note” chart or project management or planning software. Community lifelines are another useful resource that can inform planning team efforts. The lifelines framework can help planners as they identify and prioritize potential actions to stabilize lifelines by re-establishing key services or developing contingency options.

Courses of Action in a Nutshell

Courses of action address the what/who/when/where/why/how for each solution. As each potential course of action is identified, the planner should consider:

- Whether it supports the priorities, goals and objectives established by the senior official;
- Whether it is feasible; and
- Whether the stakeholders that would implement it find it acceptable.

Course of action development follows these steps:

- **Establish the timeline.** Planners should cover all mission areas in the timeline and typically use the speed of incident onset to establish the timeline. The timeline may also change by phases. For example, a hurricane’s speed of onset is typically days, while a major hazardous materials (HAZMAT) incident’s speed of onset is minutes. The timeline for a hurricane might be in hours and days, particularly during the pre- and post-impact phases. The timeline for the HAZMAT incident would most likely be in minutes and hours. For a multijurisdictional or layered plan, the timeline for a particular scenario is the same at all participating levels of government. Because disasters and emergencies are always time-sensitive, leaders should encourage developing and socializing emergency plans well before incidents actually occur.
• **Depict the scenario.** Planners use the scenario information developed in Step 3 and place the incident information on the timeline. Placement of decision points and response actions on the timeline depicts how soon the different entities enter the plan.

• **Identify and depict decision points.** Decision points indicate the place in time, as incidents unfold, when leaders anticipate making decisions about a course of action. They indicate where and when decisions are required to provide the best chance of achieving an intermediate objective or response goal (the desired end state). They also help planners determine how much time is available or needed to complete a sequence of actions.

• **Identify and depict operational tasks.** For each operational task depicted, some basic information is needed. Developing this information helps planners incorporate the task into the plan when they are writing it. Planners correctly identify an operational task when they can answer the following questions about it:
  
  - What is the action?
  - Who is responsible for the action?
  - When should the action take place?
  - How long should the action take and how much time is available?
  - What has to happen before the action?
  - What happens after the action?
  - What resources does the responsible person or entity need to perform the action?

The planning team should pause periodically to:

• Identify progress made toward the end state, including goals and objectives met and new needs or demands;

• Identify “single points of failure” (i.e., tasks that, if not completed, would cause the operation to fall apart);

• Check for omissions or gaps;

• Check for inconsistencies in organizational relationships; and

• Check for mismatches between the jurisdiction’s plan and those of other jurisdictions with which they are interacting.

• **Select courses of action.** Once the above analysis is complete, planners should compare the costs and benefits of each proposed course of action against the mission, goals and objectives. This comparison allows planners to select the preferred courses of action to move forward in the planning process. Some (but not all) selections need senior approval. Planners should use their best judgment and identify when the selection of a course or courses of action need to be elevated to the senior elected or appointed official or approval. Where practical, the appropriate official should approve these actions prior to the review and completion of the plan.
IDENTIFY RESOURCES

Once courses of action are selected, the planning team identifies resources needed to accomplish tasks without regard to resource availability. The object is to identify the resources needed to make the operation work. Once the planning team identifies all the requirements, they begin matching available resources to requirements. By tracking obligations and assignments, the planning team determines resource shortfalls and develops a list of needs that private suppliers or other jurisdictions (e.g., mutual aid partners) might fill. The resource base should also include a list of facilities vital to emergency operations, and the list should indicate how individual hazards might affect the facilities.

Whenever possible, planners should match resources with other geographical or regional needs to identify multiple demands for the same or similar resources and resolve conflicts. This step provides planners an opportunity to identify and communicate resource shortfalls to higher levels of government and prepare draft resource requests, as appropriate.

The EOP should also account for unsolvable resource shortfalls, so they are not merely assumed away. The capability estimate process is essential to this effort. A capability estimate is a planner’s assessment of a jurisdiction’s ability to take a given course of action. Capability estimates:

- Help planners decide if a course of action is realistic and supportable;
- Helps planners project and understand what might take place during an operation;
- Inform the resource section of the plan or annex; and
- Ultimately determine whether a given course of action is feasible for the jurisdiction.

Planners can capture capability estimates as written documents, tables or presentations and use them for both future and current operational planning.

At a minimum, planners should prepare capability estimates for personnel, administration and finance, operational organizations (e.g., fire, law enforcement, EMS), logistics, communications, equipment and facilities. Capability estimates should identify the criteria to evaluate each area; facts and assumptions that affect those areas; and the issues, differences and risks associated with a course of action. Figure 8 provides a suggested format for a capability estimate.
After selecting courses of action for development, many planning teams pause the process and have an external group of knowledgeable practitioners and/or subject matter experts review the selected courses of action. This review examines whether the courses of action are appropriate and contain all of the necessary elements. Leveraging expertise from outside the jurisdiction can make it easier to challenge assumptions and identify gaps in the proposed courses of action.

For plans dealing with terrorist or other adversarial threats, reviewers can examine plans through the eyes of potential attackers, identifying notable weaknesses in the plan and prompting meaningful improvements in its content. For plans addressing other hazards, the review team can look for errors in planning assumptions or in resources needed to implement the courses of action. Pointing out seemingly minor errors can have a significant positive impact by helping the jurisdiction avoid major shortfalls when the plan is put into practice.

Without sufficient context, planners could potentially interpret this type of external review process as second-guessing, fault-finding or unnecessary interference in the plan development process. Thus, the external review process works best when leaders announce and explain its purpose in advance, introduce the reviewers to the planning team, and reinforce that the reviewer role is to help strengthen the plan for the jurisdiction’s collective benefit. For their part, reviewers should foster a culture of constructive critical thinking, being creative and objective without being confrontational.
IDENTIFY INFORMATION AND INTELLIGENCE NEEDS

Another outcome from developing courses of action is a list of the information needs for each of the response participants. Planners should identify the information they need and the deadline(s) for receiving it to drive decisions and trigger actions. The planning team should capture these needs in the plan information collection matrices.

5.1.5. Step 5: Prepare and Review the Plan

WRITE THE PLAN

This step turns the results of course of action development into an EOP. The planning team develops a rough draft of the base plan, functional annexes, hazard-specific annexes or other parts of the plan as appropriate. The results from Step 4 provide an outline for the rough draft. As the planning team works through successive drafts, the members add tables, charts and graphics. The planning team prepares and circulates a final draft to obtain the comments from organizations that have responsibilities for implementing the plan. (See Chapter 4, Identifying the Right Plan for the Job, for more information on plan formats.)

Follow these simple rules for writing plans and procedures to help readers and users understand their content:

- Keep the language simple and clear by writing in plain English;
- Summarize important information with checklists and visual aids, such as maps and flowcharts;
- Avoid using jargon and minimize the use of acronyms;
- Use short sentences and active, not passive, voice;
- Provide enough detail to convey an easily understood plan that is actionable, taking into consideration the target audience and the amount of certainty about the situation;
- Format the plan and present its contents so that readers can quickly find solutions and options;
- Focus on providing mission guidance (i.e., insight into intent and vision) rather than discussing policy and regulations, which can be documented in detail in SOPs/SOGs; and
- Develop accessible tools and documents (e.g., plans, fact sheets, checklists, etc.) that users can easily convert to alternate formats.

Active vs. Passive Voice Sentences

- **Passive voice** sentences are not always clear because they de-emphasize who or what is acting. For example, “Lives are saved by firefighters.”
Active voice sentences are direct because they indicate the who or what that is doing the action up front. For example, “Firefighters save lives.” Use active voice sentences whenever possible in plans.

REVIEW THE PLAN

Planners should check the final plan for compliance with pertinent regulatory requirements and federal and state standards. Planners should consult their next level of government about its plan review cycle. Reviews of plans allow other agencies with emergency or homeland security responsibilities to suggest improvements based on their accumulated experience. For example, states may review local plans, and, upon request, FEMA regional offices may assist states in the review of EOPs. Hazard-specific federal programs, such as the Radiological Emergency Preparedness Program, require periodic review of certain sections of the all-hazards plan and may require review of associated SOPs/SOGs.32

Commonly used criteria can help decision makers determine the effectiveness and efficiency of plans. These measures include adequacy, feasibility, acceptability, completeness and compliance. Decision makers directly involved in planning can employ these criteria, along with their understanding of plan requirements, to determine a plan’s effectiveness and efficiency, as well as to assess risks and define costs. Some types of analysis, such as a determination of acceptability, are largely subjective. In this case, decision makers apply their experience, judgment, intuition, situational awareness and discretion. Other analyses, such as a determination of feasibility, should be rigorous and standardized to minimize subjectivity and preclude oversights.

A plan is adequate if:

- The scope and concept of planned operations identify and address critical tasks effectively;
- The plan can accomplish the assigned mission while complying with guidance; and
- The plan’s assumptions are valid, reasonable and comply with guidance.

A plan is feasible if the organization can accomplish the assigned mission and critical tasks by using available resources within the time contemplated by the plan. The organization allocates available resources to tasks and tracks the resources by status (e.g., assigned, out of service). Available resources include internal assets and those available through mutual aid or through existing state, regional or federal assistance agreements.

Acceptability. A plan is acceptable if it:

- Meets the requirements driven by a threat or incident;
- Meets decision maker intent;
- Adheres to public cost and time constraints; and
- Is consistent with the law.

The plan can be justified in terms of the cost of resources and if its scale is proportional to mission requirements. Planners use both acceptability and feasibility tests to accomplish the mission with available resources without incurring excessive risk regarding personnel, equipment, material or time. They also verify that risk management procedures have identified, assessed and applied control measures to mitigate operational risk (i.e., the risk associated with achieving operational objectives).

Completeness. A plan is complete if it:

- Incorporates all tasks to be accomplished;
- Includes all required capabilities;
- Integrates the needs of the general population, children of all ages, individuals with disabilities and others with access and functional needs, immigrants, individuals with limited English proficiency and diverse racial and ethnic populations;
- Provides a complete picture of the sequence and scope of the planned response operation (i.e., what should happen, when and at whose direction);
- Makes time estimates for achieving objectives; and
- Identifies success criteria and a desired end state.

Compliance. The plan should comply with guidance and doctrine to the maximum extent possible, because these provide a baseline that facilitates both planning and execution.

When using these five criteria, planners should ask the following questions:

- Did an action, a process, a decision or the operational timing identified in the plan make the situation worse or better?
- Were new alternate courses of action identified?
- Were the requirements of children, individuals with disabilities, others with access and functional needs, immigrants, individuals with limited English proficiency and diverse racial and ethnic populations fully addressed and integrated into all appropriate aspects of the plan?
- What aspects of the action, process, decision or operational timing make it something to keep in the plan?
- What aspects of the action, process, decision or operational timing make it something to avoid or remove from the plan?
What specific changes to plans and procedures, personnel, organizational structures, leadership or management processes, facilities or equipment can improve operational performance?

Reviewers should note that a jurisdiction does not have to provide all the resources needed to meet a capability requirement established during the planning effort. However, the plan should explain where the jurisdiction obtains the resources to support those required capabilities. For example, many jurisdictions do not have bomb squads or urban search and rescue teams required to meet certain capabilities. The plan should note that neighboring jurisdictions can provide those resources (or capability elements) through MAAs, memoranda of agreement (MOAs, memoranda of understanding (MOUs), regional compacts or some other formal request process.

The checklists in Chapter 6, Creating an EOP Base Plan, and Chapter 7, Adding EOP Annexes, provide a useful benchmark for reviewers to confirm that base plans and their annexes address pertinent elements. An important element of the planning process is deliberately including children, individuals with access and functional needs, household pets and service animals. Chapter 7 outlines a series of checklists to help jurisdictions meet the needs of these stakeholders throughout their plans. The jurisdiction can develop similar checklists as appropriate to address other population sectors, including populations with diverse languages and culture, populations with economic challenges, populations that depend on public transportation and visitors from outside of the jurisdiction.

APPROVE AND DISSEMINATE THE PLAN

Once the plan has been validated, the planner should present it to the appropriate elected officials and obtain official approval to promulgate the plan. Promulgation is the process that officially announces or declares a plan (or law). The promulgation process should be based on a specific statute, law or ordinance. Obtaining the senior official’s approval through a formal promulgation documentation process is vital to gaining acceptance for the plan. Promulgation also establishes the authority required for changes to the plan.

Once the senior official grants approval, the planner should arrange to distribute the plan and maintain a record of the people and organizations that received it. “Sunshine” laws may require that the jurisdiction post a copy of the plan on its website or place the plan in some other publicly accessible location. The plan should be available in alternate formats for wide accessibility and to remain compliant with relevant laws and policies (e.g., Americans with Disabilities Act).

5.1.6. Step 6: Implement and Maintain the Plan

The EOP planning process does not end when the EOP is approved and released. In many ways, publication of the EOP is the first step in a long-term process of (1) socializing the plan to optimize its use and usefulness and (2) collecting information to guide plan revisions, even though that may be several years in the future. The actual value of any EOP is determined by how consistently and how effectively the plan is used.
Socializing the EOP typically occurs through ongoing training and exercise activities involving those responsible for implementing the plan—emergency responders, emergency managers, departmental points of contact and elected and appointed officials, among others. Equally important, however, is socializing the plan and associated guidance with the broad range of whole community partners, including private sector and commercial organizations, civic and constituency groups, faith-based and other nongovernmental organizations, social and public media outlets, individuals and families. This broad audience should not only know that the EOP and supporting guidance exists, but also be able to access the documents easily and communicate with officials responsible for the EOP. This two-way communication allows community members to ask questions and offer suggestions for improvements. Social media can be an effective means of supporting this process.

If the EOP or its annexes contain information that is sensitive, the planning team can protect that information. However, the rest of the plan should be widely available, including include convenient access for those with access and functional needs, others with disabilities and for people with limited English proficiency.

The jurisdiction should also operate a continuous improvement system to constantly seek, collect and categorize information that may affect the EOP. Examples include organizational changes, lessons learned from exercises or actual events, changes in statutory or executive guidance or updates to related plans. Many of the activities associated with implementing and maintaining EOPs fall within the scope of preparedness grant programs and can be supported through coordinated application of these resources.

TRAIN ON THE PLAN

After developing a plan, organizations disseminate it and train their personnel on its content. Training equips individuals with the knowledge, skills and abilities they need to perform their respective tasks as identified in the plan. Personnel should also receive training on organization-specific procedures necessary to implement the plan.

Additional training for relevant organizations also helps implement the EOP. FEMA’s National Training and Education System consists of a nationwide network of training providers who build and sustain capabilities in multiple emergency management professional disciplines (including planning) for all levels of government by providing access to the right resources and preparing the foundation for coordinated and interoperable responses to disasters. Through specialized training, emergency management personnel achieve critical skills and measurable capabilities, enabling jurisdictions and organizations to effectively plan for and have confidence in their personnel responding to emergencies, as well as those from other entities providing mutual assistance.33

33 The National Preparedness Course Catalog is an online searchable catalog featuring a compilation of courses managed by FEMA training organizations to meet the increasing training needs of federal, state, local, tribal, territorial and insular area audiences. For more information, see https://www.firstrespondertraining.gov/frts/.
### FEMA Training Resources to Support EOP Development and Maintenance

FEMA supports a nationwide emergency management training and education network. The network includes the Center for Domestic Preparedness, the Emergency Management Institute (EMI), the Center for Homeland Defense and Security, the National Domestic Preparedness Consortium, the Rural Domestic Preparedness Consortium, the FEMA Continuation Training Grants (CTG) program partners and the FEMA Higher Education program. Together, these organizations offer more than 600 courses covering a wide range of topics and skill levels. Instruction is delivered through on-campus courses, mobile delivery and virtual training, such as independent study courses and webinars.

The following FEMA independent study courses are recommended for planning team members:

- IS-130: Exercise Evaluation and Improvement Planning
- IS-235: Emergency Planning
- IS-366: Planning for the Needs of Children in Disasters
- IS-368: Including People with Disabilities and Access and Functional Needs in Disaster Operations
- IS-1300: Introduction to Continuity of Operations

### EXERCISE THE PLAN

Evaluating the effectiveness of plans involves a combination of training events, exercises and real-world incidents to determine whether the goals, objectives, decisions, actions and timing outlined in the plan led to a successful response. In this way, homeland security and other emergency preparedness exercise programs become an integral part of the planning process. Similarly, planners need to be aware of lessons and practices from other communities.

FEMA’s Homeland Security Exercise Evaluation Program (HSEEP) provides guiding principles for exercise programs and a consistent approach to exercise program management, design and development, conduct, evaluation and improvement planning. HSEEP includes an integrated preparedness cycle that connects the jurisdiction’s planning, organizing and equipping, training, exercising, evaluating and improving through an annual integrated preparedness planning workshop and resulting integrated preparedness plan.

---

34 FEMA manages a cycle of disaster and emergency exercises across the Nation that examines and validates capabilities in prevention, protection, mitigation, response and recovery. Contact FEMA’s National Exercise Division (www.fema.gov/national-exercise-program) for more information.

Exercises help responders and other response and recovery partners understand the plan, the responsibilities and authorities of various players and the relationships among those players. Exercising also supports the premise that communities train as they expect to respond.

An **improvement planning process** can help a planning team identify areas for improvement and corrective actions required in the jurisdiction’s EOP. This process uses exercise after-action reports, as well as information from post-incident critiques, self-assessments, audits, administrative reviews or lessons learned. Members of the EOP planning team should reconvene to discuss such findings and to consider whether and how changes to the EOP or supporting guidance can address shortfalls.

Corrective actions may involve revising planning assumptions and operational concepts, changing organizational tasks or modifying organizational implementing instructions (i.e., the SOPs/SOGs). Corrective actions may also involve providing refresher training. Ultimately, the planning team should assign responsibility for taking the corrective actions.

The final component of an effective improvement planning process is creating and maintaining a mechanism for tracking and following up to confirm the timely implementation of corrective actions.

**REVIEW, REVISE AND MAINTAIN THE PLAN**

This step closes the loop in the planning process. It adds information gained through exercises and actual events to the research collected in Step 2 and starts the planning cycle over again. Plans should evolve as jurisdictions learn lessons, obtain new information and insights and update priorities.

Planning teams should establish a process to review and revise the plan. Reviews should be a recurring activity. Some jurisdictions have found it useful to review and revise portions of their EOPs every month. Many accomplish their reviews on an annual basis. In no case should any part of the plan go for more than two years without being reviewed and revised. Teams should also consider reviewing and updating the plan after the following events:

- A major incident;
- A change in operational resources (e.g., policy, personnel, organizational structures, management processes, facilities, equipment);
- A formal update of planning guidance or standards;
- A change in elected officials;
- Each time the plan is used;
- Major exercises;
- Changes in the jurisdiction’s demographics or hazard or threat profile;
1831  ▪ Changes in the jurisdiction’s tolerance of identified risks; or
1832  ▪ The enactment of new or amended laws or ordinances.
6. Creating an EOP Base Plan

This chapter explores key elements of an EOP’s base plan. The base plan:

- Provides an overview of the jurisdiction’s emergency management/response program and its ability to prepare for, respond to and recover from disasters or emergencies;
- Identifies emergency response policies;
- Describes the response organization; and
- Assigns tasks.

Although the base plan guides the development of the more operationally oriented annexes, its primary audience consists of the jurisdiction’s senior official, his or her staff, agency heads and the community (as appropriate). The elements listed in this section should meet the needs of this audience while providing a solid foundation for the development of supporting annexes.

6.1. Introductory Material

Certain items that enhance accountability and ease of use should preface an EOP. Typical introductory material includes the following components:

- The cover page indicates the title of the plan, documents the date the plan was issued/promulgated and the name of jurisdiction(s) covered by the plan.
- The promulgation document gives the plan official status. It assigns both the authority and the responsibility to organizations to perform their tasks. It should also mention the responsibilities of tasked organizations to prepare and maintain their own procedures and guidelines and commit those organizations to carry out the necessary training, exercises and plan maintenance. In addition, this document allows senior officials to affirm their support for emergency management.
- The approval and implementation page introduces the plan, outlines its applicability and indicates that it supersedes all previous plans. It should include a delegation of authority for specific modifications that can be made to the plan and by whom they can be made without the senior official’s signature. It should also include a date and be signed by the senior official(s) (e.g., governor, tribal leader[s], mayor, county judge, commissioner[s]).
- The record of changes documents each change to the plan. Those responsible for the EOP’s maintenance should record a change number, the date of the change, the name of the person who made the change and a summary of the change.
The record of distribution, usually in table format, indicates the titles and the names of the people receiving the plan, the agency to which they belong, the dates of delivery and the number of copies delivered. Other relevant information could be considered. The record of distribution can document that tasked individuals and organizations acknowledged receipt, review and/or acceptance of the plan. Copies of the plan can be made available to the public and media without SOPs/SOGs, call-down lists or other sensitive information.

The table of contents should be logically ordered and clearly identify the major sections and subsections of the plan to make finding information within the plan easier.

6.2. Purpose, Scope, Situation Overview and Planning Assumptions

6.2.1. Purpose

The purpose sets the foundation for the rest of the EOP. The base plan’s purpose is a general statement of what the EOP is meant to do. Support the general statement with a brief synopsis of the base plan and annexes.

6.2.2. Scope

The EOP should also explicitly state the scope of emergency and disaster response and the entities (e.g., departments, agencies, private sector, individuals) and geographic areas to which the plan applies. This section describes at what times or under what conditions this plan would be activated (e.g., major county disaster versus minor local emergency; major statewide disaster; terrorist attack within the local community, county or state).

6.2.3. Situation Overview

This section summarizes the steps taken by the jurisdiction to prepare for disasters. It characterizes the planning environment, making it clear why an EOP is necessary. The level of detail is a matter of judgment; some information may be limited to a few specific annexes and presented there. At a minimum, the situation section should summarize hazards that the jurisdiction faces and discuss how it expects to receive (or provide) assistance within its regional response structures.

The situation section covers a general discussion of:

- Relative probability and impact of the hazards;
- Geographic areas likely to be affected by particular hazards;
- Vulnerable facilities (e.g., nursing homes, schools, hospitals, infrastructure);
Population distribution and locations, including any concentrated populations of individuals with disabilities, access and functional needs or limited English proficiency, as well as unaccompanied minors and children in daycare and school settings;

- Dependencies on other jurisdictions for critical resources;
- The jurisdiction’s process to determine its capabilities and limits to prepare for and respond to the defined hazards; and
- The actions taken in advance to minimize an incident’s impacts, including short- and long-term strategies.

HAZARD AND THREAT ANALYSIS SUMMARY

This section summarizes the major findings from a completed hazard and threat analysis of the hazards or threats likely to impact the jurisdiction and how the jurisdiction expects to receive (or provide) assistance within its regional response structures. Note: The hazard and threat analysis information can be a component of the EOP or maintained as a part of the local mitigation plan.

Hazard and Threat Analysis Section Checklist

- Summarize/identify the hazards that pose a unique risk to the jurisdiction and would result in the need to activate this plan (e.g., threatened or actual natural disasters, acts of terrorism, other human-caused disasters).
- Summarize/identify the probable high-risk areas (i.e., population, infrastructure and environmental) that are likely to be impacted by the defined hazards (e.g., hospitals, congregate care facilities, wildlife refuges, types/numbers of homes/businesses in floodplains, areas around chemical facilities).
- Summarize/identify the defined risks that have occurred and the likelihood they will continue to occur within the jurisdiction (e.g., historical frequency, probable future risk, national security threat assessments).
- Describe how the jurisdiction has incorporated intelligence from threat analysis via state/local fusion centers, joint terrorism task forces, national intelligence organizations, etc., into its hazard and threat analysis.
- Describe how the vulnerability and impact analysis incorporates critical infrastructure protection activities.
- Describe how the jurisdiction assessed and incorporated agricultural security; food supply security; cyber security; chemical, biological, radiological, nuclear and high-yield explosive (CBRNE) incidents; and pandemics (those located/originating in the jurisdiction, as well as a nonlocal, nationwide or global incident).
- Describe the assumptions and methods to complete the jurisdiction’s hazard and threat analysis, including tools or methodologies to complete the analysis (e.g., a state’s hazard
analysis and risk assessment manual, mitigation plan guidance, vulnerability assessment
criteria, consequence analysis criteria).

☐ Include maps that show the high-risk areas that the identified risks are likely to impact (e.g.,
residential/commercial areas within defined floodplains, earthquake fault zones, vulnerable
zones for HAZMAT facilities/routes, areas within ingestion zones for nuclear power plants,
critical infrastructure).

☐ Describe/identify the risks that could originate in a neighboring jurisdiction and could create
hazardous conditions in this jurisdiction (e.g., critical infrastructure loss, watershed runoff,
chemical incident, civil disturbance, terrorist act).

☐ Describe/identify the unique time variables that may influence the hazard and threat
analysis and preplanning for the emergency (e.g., rush hours, annual festivals, seasonal
events, how quickly the incident occurs, the time of day that the incident occurs).

6.2.4. Planning Assumptions

Planning assumptions identify what the planning team assumes to be facts for planning purposes to
make it possible to execute the EOP. During operations, the assumptions indicate areas to adjust in
the plan as the facts of the incident become known. These also provide the opportunity to
communicate the intent of senior officials regarding emergency operations priorities.

6.3. Concept of Operations

This CONOPS section explains in broad terms the decision maker’s or leader’s intent regarding an
operation. This section should give an overall picture of how the response organization accomplishes
a mission or set of objectives to reach a desired end state. Ideally, it offers a clear methodology to
realize the goals and objectives to execute the plan. This may include a brief discussion of the
activation levels identified by the jurisdiction for its operations center. It may touch on direction and
control, alert and warning and continuity matters that the annexes may deal with more fully.

CONOPS Section Checklist

☐ Describe who has the authority to activate the plan (e.g., emergency management agency,
senior official, state official, fire/police chief).

☐ Describe the process, templates and individuals involved in issuing a declaration of
emergency for a given hazard and how the jurisdiction coordinates the declaration with
neighboring jurisdictions and the state.

☐ Describe how the jurisdiction resolves legal questions/ issues as a result of preparedness,
response or recovery actions, including the liability protection available to responders.

☐ Describe the process by which the emergency management agency coordinates with all
appropriate agencies, boards or divisions within the jurisdiction.
6.4. Organization and Assignment of Responsibilities

This EOP section provides an overview of the key functions that organizations accomplish during an emergency, including the roles that federal, state, territorial, tribal, insular area, local, regional and private sector organizations take to support local operations.

This section also establishes the operational organization that responds to an emergency. It includes a list of the kinds of tasks to be performed, by position and organization, without the procedural details included in functional annexes. When two or more organizations perform the same kind of task, one should be given primary responsibility, with the other(s) providing a supporting role. For the sake of clarity, a matrix of organizations and areas of responsibility (including functions) should summarize the primary and supporting roles. Include shared general responsibilities, such as developing SOPs/SOGs, and the matrix might include organizations not under jurisdictional control, if they have defined responsibilities for responding to emergencies that occur in the jurisdiction. Organization charts, especially those depicting how a jurisdiction is implementing the ICS or Multiagency Coordination System structure, are helpful. This section should also outline agency and departmental roles related to prevention and protection activities.

In addition, this section is where a jurisdiction discusses the option that it uses to organize emergency management—ESF, agency and department, functional areas of ICS or a hybrid. The selected management structure determines what types of annexes that the EOP includes, and it should be carried through to any hazard annexes.

Key Functions Section Checklist

- Identify/outline the responsibilities assigned to each organization that has a mission assignment defined in the plan, including (but not limited to) the following:
  - The local senior elected or appointed officials (e.g., governor, mayor, commissioner, administrative judge, council, executive director);
  - Local departments and agencies (e.g., fire, law enforcement, EMS, public health, emergency management, public works, social services, animal control);
State agencies most often and/or likely to be used to support local operations (e.g., department of transportation, state police/highway patrol, department of agriculture, department of natural resources, environmental protection/quality, emergency management, homeland security, department of health/public health, National Guard);

Regional organizations or groups most often and/or likely to be used to support local operations;

Federal agencies most often and/or likely to be used to support local operations (e.g., FEMA, Coast Guard, Department of Justice, Federal Bureau of Investigation, Federal Aviation Administration, National Transportation Safety Board, Department of Defense, Department of Transportation, Department of Agriculture);

Government-sponsored volunteer resources (e.g., CERTs, Fire Corps and/or Medical Reserve Corps, Volunteers in Police Service, auxiliary police); and

Private sector and voluntary organizations (e.g., organizations that assist with sheltering, feeding, services for persons with disabilities, animal response, social services, health-related needs, community and faith-based organizations, animal welfare and/or humane organizations, independent living centers, disability advocacy groups, business and industry participation).

Describe how the organization addresses prevention roles and responsibilities, including linkages with fusion centers where applicable.

Describe how the jurisdiction manages roles and responsibilities for critical infrastructure protection and restoration.

Describe how the jurisdiction determines roles and responsibilities for unaffiliated volunteers and how to incorporate these individuals into the emergency operation.

Describe/identify what MAAs are in place to quickly activate and share resources during an emergency. Examples of agreements that may exist include agreements:

- Between response groups (e.g., fire, police, EMS);
- For additional resources/assistance between neighboring jurisdictions’ response forces (e.g., fire, police, EMS);
- To provide and receive additional resources through the Emergency Management Assistance Compact;
- For resources (e.g., outside assistance, personnel, equipment);
- Between medical facilities inside and outside the jurisdiction (e.g., for using facilities, accepting patients);
- Between water and wastewater utilities inside and outside the jurisdiction;
- For alert and notification and dissemination of emergency public information, to include obtaining system permissions for alert type and area (e.g., Federal Information Processing
Standard code, event code, approved by the state approval authority for Emergency Alert System [EAS] and Wireless Emergency Alerts [WEAs] alerting via IPAWS; and

- For evacuation (e.g., use of buildings, restaurants and homes as shelters/lodging; relocation centers; transportation support), including agreements between jurisdictions for the acceptance of evacuees.

- Describe how the jurisdiction maintains a current list of available NIMS-typed resources and credentialed personnel.

- Describe how all tasked organizations maintain current notification rosters, SOPs/SOGs and checklists to carry out their assigned tasks.

- Provide a matrix that summarizes which tasked organizations have the primary lead versus a secondary support role for each defined response function.

- Describe the jurisdiction’s policies regarding public safety enforcement actions required to maintain the public order during a crisis response, including teams of enforcement officers needed to handle persons who are disrupting the public order, violating laws, requiring quarantine, etc.

### 6.5. Direction, Control and Coordination

This section of the base plan describes the framework for all direction, control and coordination activities. It identifies who has tactical and operational control of response assets. It also explains how multijurisdictional coordination systems support organizations coordinating efforts across jurisdictions while allowing each jurisdiction to retain its own authorities. Additionally, it provides information on how department and agency plans nest into the EOP (horizontal integration) and how higher-level plans layer on the EOP (vertical integration).

**Direction, Control and Coordination Section Checklist**

- Identify who has tactical and operational control of response assets.

- Discuss multijurisdictional coordination systems and processes used during an emergency.

### 6.6. Information Collection, Analysis and Dissemination

This section of the EOP describes the essential information requirements identified during the planning process. It describes the type of information needed, the source of the information, who uses the information, how the information is shared, the format for providing the information and any specific times the information is needed. State and local prevention and protection assets should closely cooperate in developing this section. The contents of this section are best provided in a tabular format. This section may be expanded as an annex.
Information Collection, Analysis and Dissemination Section Checklist

- Identify intelligence position (e.g., fusion center liaison) requirements for the EOC’s planning section.
- Describe plans for coordination between the planning section and the jurisdiction’s fusion center.
- Describe information dissemination methods (e.g., verbal, electronic, graphics) and protocols.
- Describe critical information needs and collection priorities.
- Describe long-term information collection, analysis and dissemination strategies.
- Describe collaboration with the general public, to include sector-specific watch programs.

6.7. Communications

This section describes the communication protocols and coordination procedures used between response organizations during emergencies and disasters. It discusses the framework for delivering communications support and how the jurisdiction’s communications integrate into the regional or national disaster communications network. It does not describe communications hardware or specific procedures found in departmental SOPs/SOGs.

Planners should identify and summarize separate interoperable communications plans for each communication system that they use. This section may be expanded as an annex and is usually supplemented by communications SOPs/SOGs and field guides.

Communications Section Checklist

- Describe the framework for delivering communications support and how the jurisdiction’s communications integrate into the regional or national disaster communications network.
- Identify and summarize separate interoperable communications plans.

6.8. Administration, Finance and Logistics

This section of the EOP covers general support requirements and the availability of services and support for all types of emergencies, as well as general policies for managing resources.

Administration, Finance and Logistics Section Checklist

- Include references to intrastate and interstate MAAs, including the Emergency Management Assistance Compact.
Identify authorities for and policies on augmenting staff by reassigning public employees and soliciting volunteers, along with relevant liability provisions.

Include or reference general policies on keeping financial records, reporting, tracking resource needs, tracking the source and use of resources, acquiring ownership of resources and compensating the owners of private property used by the jurisdiction.

If planners expand this section, they should break it into individual functional annexes, one for each element.

### 6.8.1. Administration

This section of the EOP describes administrative protocols used during an emergency operation.

#### DOCUMENTATION

The jurisdiction should use systematic processes to document the response to and recovery from a disaster. Note: This information can also be discussed for each emergency response function or for the specific hazards.

**Documentation Section Checklist**

- Describe the process and agencies that document the actions taken during and after the emergency (e.g., incident and damage assessment, incident command logs, cost recovery).
- Describe/summarize the reasons for documenting the actions taken during both the response and recovery phases of the disaster (e.g., create historical records, recover costs, address insurance needs, develop mitigation strategies).
- Include copies of required reports (e.g., cost recovery, damage assessment, incident critique, historical record).
- Describe the agencies and methods that create a permanent historical record of the incident (after-action report) and include information identifying the actions taken, resources expended, economic and human impacts and lessons learned as a result of the disaster.

#### AFTER-ACTION REPORT

The after-action report is the end result of an administrative process in which the jurisdiction reviews and discusses the response to identify strengths and weaknesses in the emergency management and response program.

**After-Action Reporting Section Checklist**

- Describe the reasons and need to develop an after-action report (e.g., review actions taken, identify equipment shortcomings, improve operational readiness, highlight strengths/initiatives).
Describe the methods and agencies to organize and conduct a review of the disaster, including how the jurisdiction documents recommendations to improve local readiness (e.g., change plans/procedures, acquire new or replace outdated resources, retrain personnel).

Describe the links and connections between the processes to critique the response to an emergency/disaster and the processes to document recommendations for the jurisdiction’s exercise program.

Describe how the jurisdiction conducts corrective actions and/or completes the deficiencies and recommendations identified in the after-action report.

### 6.8.2. Finance

This base plan section describes finance protocols to recover the costs incurred during an emergency operation.

**Finance Section Checklist**

- Describe/identify the various programs that allow local political jurisdictions and their response/support agencies to recover their costs (e.g., Small Business Administration, Public Assistance Program).

- Identify and describe the actions to document the costs incurred during response and recovery operations (e.g., personnel overtime, equipment used/expended, contracts initiated).

- Describe/identify the programs, and how the jurisdiction assists the general public, to recover their costs and begin rebuilding (e.g., Small Business Administration, unemployment benefits, worker’s compensation).

- Describe the methods to educate responders and local officials about the cost recovery process.

- Describe the impact and role of insurance in recovering costs (e.g., self-insured, participation in the National Flood Insurance Program, homeowner policies).

- Describe the methods of pre- and post-declaration funding for the jurisdiction’s program for household pets and service animals preparedness and emergency response, including how to capture eligible costs for reimbursement by the Public Assistance Program, eligible donations for volunteer labor and resources and eligible donations for mutual aid resources.

### 6.8.3. Logistics

This section describes the logistics and resource management mechanisms to identify and acquire resources in advance of and during emergency operations, especially to overcome gaps possibly identified in a capability assessment.
6.9. Plan Development and Maintenance

This section of the plan describes the overall approach to planning and the assignment of plan development and maintenance responsibilities.

Plan Development and Maintenance Section Checklist

- Describe the planning process, participants in that process and how planners coordinate development and revision of different levels of the EOP (base plan, annexes and SOPs/SOGs) during the preparedness phase.
- Assign responsibility for the overall planning and coordination to a specific position.
- Establish a regular cycle of training on, evaluating, reviewing and updating the EOP.
- Summarize how other jurisdictions/organizations reviewed, coordinated on and/or evaluated the plan.
- Describe how this plan was determined to be consistent with the EOPs from adjoining/intra-state regional jurisdictions.
Describe the process to review and revise the plan periodically (e.g., annually, or more often if changes in the jurisdiction warrant [e.g., changes in administration or procedures, newly added resources/training, revised phone contacts or numbers]).

Describe the responsibility of each organization/agency (governmental, nonprofit and private sector) to review and submit changes to its respective portion(s) of the plan.

Identify/summarize to whom the plan is distributed, including whether it is shared with other jurisdictions. Note: This list can be included as a tab to the plan.

Describe/identify where and how the public can access the plan.

Include a page to document when the plan is changed.

6.10. Authorities and References

This section of the base plan documents the legal basis for emergency operations and activities.

Authorities and References Section Checklist

- Include lists of laws, statutes, ordinances, executive orders, regulations and formal agreements relevant to emergencies (e.g., MAAs) including applicable state-designated public-alerting authorities for the activation of EAS and WEA.

- Specify the extent and limits of the emergency authorities granted to the senior official, including the conditions under which these authorities become effective and when they terminate.

- Pre-delegate emergency authorities (i.e., enabling measures for specific emergency-related authorities to be exercised by the elected or appointed leadership or their designated successors).

- Include provisions for COOP and COG (e.g., the succession of decision-making authority and operational control) to perform critical emergency functions.

- Identify/describe the federal, state and local laws that specifically apply to developing and implementing this plan, including (but not limited to) the following:
  - Local and regional ordinances and statutes;
  - State laws or revised code sections that apply to emergency management and homeland security;
  - State administrative code sections that define roles, responsibilities and operational procedures;
  - State attorney general opinions; and
  - Federal laws, regulations and standards (e.g., Stafford Act, FEMA policy, Americans with Disabilities Act).
| 2223 | Identify/describe the reference manuals to develop the plan and/or help prepare for and respond to disasters or emergencies, including (but not limited to) general planning tools, technical references and computer software. |
| 2226 | Identify/define the words, phrases, acronyms and abbreviations that have special meaning with regard to emergency. |
7. Adding EOP Annexes

This chapter describes the purpose and potential content of annexes to the base plan. Annexes add specific information and direction to EOPs and provide a level of detail beyond what the base plan addresses.

The most common types of EOP annexes deal with specific response functions, such as emergency sheltering, debris management or search and rescue and specific threats, risks and hazards, such as earthquakes, cyber incidents or wildfires. Jurisdictions may create other types of EOP annexes to address various phases in the lifecycle of an incident or support functions such as disaster financial management or private sector engagement.

7.1. Functional Annexes

Functional annexes focus on critical operational functions and who is responsible for carrying them out. These annexes clearly describe the policies, processes, roles and responsibilities of various partners—government officials, departments and agencies; private sector elements and nonprofit organizations—before, during and after emergencies.

While the base plan provides broad information relevant to emergency response as a whole, functional annexes focus on specific responsibilities, tasks and operational actions for a particular emergency function. Functional annexes may also establish preparedness targets (e.g., training, exercises, equipment checks and maintenance) that help achieve function-related goals and objectives during emergencies and disasters.

An important planning task is to identify the functions that are essential to successful emergency response. These core functions may become the subjects of the EOP annexes. The constitutional and organizational structures of a jurisdiction’s government, the capabilities of its emergency services agencies and established policy and intended outcomes of emergency operations influence the choice of core functions.

7.1.1. Functional Annexes Content

These annexes contain detailed descriptions of the methods that government agencies and departments follow for critical operational functions during emergency operations. The essence of these support functions should be incorporated into plans, rather than be standalone.

The checklists in this section are organized alphabetically and offer example content for planning teams to consider when developing and updating their EOPs.

Note: This information is a starting point for planning teams but may not fully reflect the issues that jurisdictions need to consider in their plans.
Note: **ESF Annexes** are a special type of functional annex that the federal government and many states use. Jurisdictions may choose to align their functional annex structure to the ESFs in the NRF, adding additional ESFs or fine-tuning the ESF titles as necessary. Using the ESF structure can facilitate the flow of local requests for governmental support to the state and federal levels during an incident and the provision of resources back to the local government.

### AGRICULTURE AND NATURAL RESOURCES

#### Agriculture and Natural Resources Section Checklist

- Describe the process to determine nutrition assistance needs, obtain appropriate food supplies and arrange for delivery of the supplies.
- Describe the plan to respond to animal and plant diseases and pests, including an outbreak of a highly contagious or economically devastating animal/zoonotic disease or an outbreak of a harmful or economically significant plant pest or disease.
- Describe the methods to address the safety and security of the food supply.
- Describe the response actions to preserve, conserve, rehabilitate, recover and restore natural and cultural resources and historic properties.

### COMMUNICATIONS

#### Communications Section Checklist

- Identify and describe the actions to manage communications between the on-scene personnel/agencies (e.g., radio frequencies/tactical channels, cell phones, data links, command post liaisons, communications vehicle/van) to establish and maintain a common operating picture of the incident.
- Identify and describe the actions to identify and overcome communications shortfalls (e.g., personnel with incompatible equipment) with the use of alternative methods (e.g., Amateur Radio Emergency Services/Radio Amateur Civil Emergency Service at the command post/off-site locations, citizens band radios).
- Identify and describe the actions to manage communications between the on-scene and off-scene personnel/agencies (e.g., shelters, hospitals, emergency management agency).
- Identify and describe the actions of 911/dispatch centers to support/coordinate communications for the on-scene personnel/agencies, including alternate methods of service if 911/dispatch is out of operation (e.g., resource mobilization, documentation, backup).
- Identify and describe the actions to identify and overcome communication systems shortfalls with the public (e.g., network congestion, cellular outages, landline telephone outages, power outages, internet outages) and alternative methods to communicate with the affected population (e.g., door-to-door, deployable digital signage/loud speakers/sirens).
Describe the arrangements to protect emergency circuits with telecommunications service priority for prompt restoration/provisioning.

Describe how communications are made accessible to individuals with communication disabilities working in emergency operations, in accordance with the Americans with Disabilities Act.

Identify and describe the actions of an EOC to support and coordinate communications between the on- and off-scene personnel and agencies.

Describe/identify the interoperable communications plan and compatible frequencies that agencies use during a response (e.g., who can talk to whom, including contiguous jurisdictions and private agencies).

Identify and describe the actions to notify neighboring jurisdictions when an incident occurs.

Describe how the jurisdiction provides and maintains 24-hour communications.

Continuity planning helps to implement an EOP during and after an emergency. It helps make essential functions and services available, and leaders visible, when normal operations are impacted or necessary resources are unavailable. Continuity should be identified and integrated into the EOP; however, an annex or standalone plan can provide details and specifics of the continuity approach.

**Continuity Section Checklist**

- Describe essential functions, such as providing vital services, exercising civil authority, maintaining the safety and well-being of the populace and sustaining the industrial/economic base in an emergency.
- Describe plans for establishing recovery time objectives, recovery point objectives or recovery priorities for each essential function.
- Identify personnel and/or teams needed to perform essential functions.
- Describe orders of succession and delegations of authority.
- Describe continuity/alternate facilities and continuity communications methods.
- Describe plans for essential records and human resource management.
- Describe plans for devolution or direction and control.
- Describe plans to reconstitute operations.
- Identify applicable training and exercise programs.
- Describe the processes for evaluations, after-action reports and lessons learned.
- Describe the process and criteria for corrective action plans.
DIRECTION, CONTROL AND COORDINATION

Initial Notification

Initial Notification Section Checklist

- Identify and describe the actions to receive and document the initial notification that an emergency has occurred.
- Identify and describe the actions to coordinate, manage and disseminate notifications effectively to alert/dispatch response and support agencies (e.g., 911 centers, individual fire/police dispatch offices, call trees) under all hazards and conditions.
- Identify and describe the actions to notify and coordinate with adjacent jurisdiction(s) about a local emergency that may pose a risk (e.g., flash flood, chemical release, terrorist act).
- Describe the use of Emergency Condition/Action Levels in the initial notification process (e.g., Snow Emergency Levels 1–3, Chemical Levels 1–3, Crisis Stages 1–4) where defined by statute, authority or other guidance.

Incident Assessment

Incident Assessment Section Checklist

- Identify and describe the actions to gather essential information and assess the immediate risks posed by the emergency.
- Describe how the jurisdiction disseminates or shares the initial assessment to make protective action decisions and establish response priorities, including the need to declare a state of emergency.
- Identify and describe the actions to monitor the impacts and future effects that may result from the emergency.

Incident Command

Incident Command Section Checklist

- Identify and describe the actions to implement the ICS and coordinate response operations, including identifying the key positions on the incident management team (e.g., operations, agency liaisons, safety).
- Describe how/where the jurisdiction will establish an incident command post (e.g., chief’s car, command bus, nearest enclosed structure) and how to identify it during the emergency (e.g., green light, flag, radio call).
- Describe the process to coordinate activities between the incident command post and an activated EOC.
Identify and describe the actions to coordinate direct communications between the on-scene responders, as well as with the off-scene agencies that have a response role (e.g., hospital, American Red Cross).

Describe the process the incident commander or unified command uses to secure additional resources/support when local assets are exhausted or become limited, including planned state, federal and private assets.

Describe the process the incident commander or unified command uses to coordinate and integrate the unplanned arrival of individuals and volunteer groups into the response system and to clarify their limits on liability protection.

Emergency Operations Center

An SOP/SOG may address EOC functions. If so, identify the separate SOP/SOG in the EOP.

Emergency Operations Center Section Checklist

Describe the purpose and functions of an EOC during an emergency or declared disaster, including operational and communications plans with a business emergency operations center (BEOC).

Describe/identify under what conditions the jurisdiction activates a primary and/or alternate EOC and who makes this determination.

Identify the primary and alternate sites that are likely for an EOC for the jurisdiction (e.g., city hall, fire department, emergency management agency, dedicated facility).

Describe the process to activate the primary or alternate EOC (e.g., staff notification, equipment setup), including the process for moving from one EOC to another.

Identify who is in charge of the EOC (e.g., emergency management agency director, senior official, fire/police chief, department/agency director) and describe how to manage EOC operations.

Describe/identify the staff and equipment necessary for an EOC (e.g., first response liaisons, elected or appointed officials, support agencies, communications, administrative support).

Identify and describe the actions to gather and share pertinent information between the scene, outside agencies and the EOC (e.g., damage observations, response priorities, resource needs), including sharing information between neighboring and state EOCs.

Describe the EOC’s ability to manage an emergency response that lasts longer than 24 hours (e.g., staffing needs, shift changes, resource needs, feeding, alternate power).

Identify and describe the actions to transition from response to recovery operations.

Describe the process to deactivate/close the EOC (e.g., staff releases, equipment cleanup, documentation).
Identify the lead official and at least two alternates responsible for staffing each key position at the primary EOC, as well as the alternates (if different), to be consistent with NIMS.

Identify and describe the actions to routinely brief senior officials not present in the EOC on the emergency situation (e.g., governor, commissioner, administrative judge, mayor, city council, trustees) and to authorize emergency actions (e.g., declare an emergency, request state and federal assistance, purchase resources).

Identify and describe the actions to manage public information.

Provide a diagram of the primary and alternate EOCs (e.g., locations, floor plans, displays) and identify and describe the critical communications equipment available/needed (e.g., phone numbers, radio frequencies, faxes).

Provide copies of specific forms or logs for EOC personnel to use.

ENERGY

Energy Section Checklist

Describe the process to address significant disruptions in energy supplies for any reason, whether caused by physical disruption of energy transmission and distribution systems, unexpected operational failure of such systems or unusual economic or international political events.

Describe the process to address the impact that damage to an energy system in one geographic region may have on energy supplies, systems and components in other regions relying on the same system.

Describe/identify the energy-centric critical assets and infrastructures, as well as the method to monitor those resources to identify and mitigate vulnerabilities to energy facilities.

FINANCIAL MANAGEMENT

Financial Management Section Checklist

Identify and describe the actions to provide funds expeditiously and conduct financial operations in accordance with established law, policies, regulations and standards.

Describe how to capture eligible costs for potential reimbursement.

FIREFIGHTING

Firefighting Section Checklist

Describe the process to detect and suppress wildland, rural and urban fires resulting from, or occurring coincidentally with, an incident response.
Describe existing interstate and intrastate firefighting assistance agreements.

Describe the methods for transmitting situation and damage assessment information through established channels.

HAZARDOUS MATERIALS

Hazardous Materials Checklist

- Describe the actions to prevent, minimize or mitigate an oil or hazardous materials release.
- Describe the methods to detect and assess the extent of contamination (including sampling and analysis and environmental monitoring).
- Describe the methods to stabilize a release and prevent the spread of contamination.
- Describe the options for environmental cleanup and waste disposal; implementing environmental cleanup; and storing, treating and disposing of oil and hazardous materials.

LAW ENFORCEMENT

Law Enforcement Section Checklist

- Describe the method to provide public safety and security resources to support incident operations, including threat or pre-incident and post-incident situations.
- Describe the process to determine public safety and security requirements and to determine resource priorities.
- Describe the process to maintain communication with supporting agencies to determine capabilities, assess the availability of resources and track resources.

LOGISTICS AND RESOURCE MANAGEMENT

Logistics and Resource Management Section Checklist

- Identify and describe the actions for resource management in accordance with the NIMS resource typing and include the pre-positioning of resources to efficiently and effectively respond to an incident.
- Describe the process to identify, deploy, use, support, dismiss and demobilize affiliated and spontaneous unaffiliated volunteers.
- Describe the process to manage unsolicited donations.
- Describe plans for establishing logistical staging areas for internal and external response personnel, equipment and supplies.
- Describe plans for establishing points of distribution across the jurisdiction.
Describe plans for providing support for a larger, regional incident.

Describe strategies for transporting materials through restricted areas, quarantine lines, law enforcement checkpoints and so forth that all affected parties agree upon.

MASS CARE

Mass Care Section Checklist

- Identify and describe the actions to identify, open and staff emergency shelters, including temporarily using reception centers while waiting for shelters to open officially.
- Describe the agencies and methods to provide life-sustaining goods and services (e.g., food, water) to promote the well-being of displaced individuals and families throughout the entire process (including household pets and service animals).
- Identify locations for multiagency (recovery) resource centers and/or disaster recovery centers.
- Describe how shelters coordinate their operations with on-scene and other off-site support agencies (e.g., expected numbers evacuated, emergency medical support).
- Describe the plans, methods and agencies/organizations responsible for distributing emergency relief items (e.g., hygiene kits, cleanup items, infant care supplies).
- Describe how shelters keep evacuees informed about the status of the disaster, including information about actions evacuees may need to take when returning home.
- Identify and describe the actions to notify or inform the public about the status of injured or missing relatives.
- Describe the methods to identify, screen and handle evacuees exposed to the hazards posed by the disaster (e.g., infectious waste, polluted floodwaters, chemical hazards) and the methods to keep the shelter free of contamination.
- Describe arrangements with other jurisdictions for their assistance in sheltering, including providing shelters when it is not practical locally (e.g., no shelters or staff support are available).
- Describe the agencies/organizations and methods for providing feeding services both within the shelter facilities and at other identified feeding sites or mobile feeding operations.

Accommodating Individuals with Disabilities and Others with Access and Functional Needs

Accommodating Individuals with Disabilities and Others with Access and Functional Needs Section Checklist

- Identify and describe the actions to confirm that the Americans with Disabilities Act Accessibility Guidelines govern shelter site selection and operation.
Describe how the jurisdiction provides physical and programmatic accessibility of shelter facilities, effective communication using multiple methods, full access to emergency services and reasonable modification of programs or policies where needed.

Describe the method for providing adequate shelter space allocation for children, as well as individuals with disabilities and others with access and functional needs who may need additional space for assistive devices (e.g., wheelchairs, walkers).

Identify and describe the actions to provide alternate shelter accommodations for evacuees from domestic violence shelters.

Describe the agencies and methods to provide care and support for institutionalized populations (e.g., long-term care and assisted living facilities, group homes), individuals with disabilities and/or access and functional needs (e.g., medical and prescription support, personal assistance services, durable medical equipment, consumable medical supplies, childcare, transportation [including accessible transportation], foreign language interpreters), including their caregivers.

Describe the method by which the jurisdiction provides necessary developmentally appropriate supplies (e.g., diapers, formula, age-appropriate foods), staff, medicines, durable medical equipment and supplies that are needed during an emergency for children with disabilities and other specialized health care needs.

Identify and describe the actions to identify and address the general public’s unmet needs during the disaster.

Describe the mechanisms or processes to provide emergency childcare services for accompanied and unaccompanied minors in shelters.

Sheltering Animals

Sheltering Animals Section Checklist

Describe the partnership between the jurisdiction’s emergency management agency, the animal control authority, the mass care provider(s) and the owner of each proposed congregate household pet sheltering facility.

Identify and describe the actions to care for household pets and service animals brought to shelters by evacuees.

Describe the provisions for sheltering unclaimed animals that cannot be immediately transferred to an animal control shelter or when a shelter receives non-eligible animals.

Identify and describe the actions to segregate or seize household pets showing signs of abuse.

Describe the method for household pet registration (including identifying current rabies vaccinations for all animals).
☐ Describe the method to provide guidance to human shelter operators on admitting and treating service animals.

☐ Describe the criteria to expeditiously identify congregate household pet shelters and alternate facilities.

☐ Describe the method to provide utilities, such as running water, adequate lighting, proper ventilation, electricity and backup power, at congregate household pet shelters.

☐ Identify and describe the actions to address the risk of injury by an aggressive or frightened animal, the possibility of disease transmission and other health risks for responders and volunteers staffing the congregate household pet shelter.

☐ Identify and describe the actions for pre-disaster inspections and developing agreements for each congregate household pet facility.

☐ Describe the method of care and maintenance of each facility while in use as a shelter.

☐ Describe the method for identifying equipment and supplies that may be needed to operate each congregate household pet shelter, as well as supplies that household pet owners may bring with them to the congregate shelter.

☐ Describe the method for physical security of each congregate household pet facility, including perimeter controls and security personnel.

☐ Describe the method for housing a variety of household pet species (e.g., sizes of crates/cages, temperature control, appropriate lighting).

☐ Describe the method for separating household pets based on appropriate criteria and requirements.

☐ Describe the method for setting up and maintaining household pet confinement areas (e.g., crates, cages, pens) for safety, cleanliness and control of noise levels, as well as a household pet first aid area inside each shelter.

☐ Describe the method for controlling fleas, ticks and other pests at each congregate household pet shelter.

☐ Describe the criteria for designating and safely segregating aggressive animals.

☐ Describe the method for segregation of household pets to prevent the transmission of disease.

☐ Identify and describe the actions to relocate a household pet due to illness, injury or aggression to an alternate facility (e.g., veterinary clinic, animal control shelter).

☐ Describe the method for providing controlled areas (indoor or outdoor) for exercising household pets.

☐ Describe the method for disposing of household pet waste and dead animals.

☐ Describe the method to reunite rescued animals with their owners.
Identify and describe the actions to address the long-term care, permanent relocation or disposal of unclaimed pets.

Mutual Aid/Multijurisdictional Coordination Section Checklist

- Describe the processes to establish and execute MAAs and multijurisdictional coordination in support of incident response.

Population Protection Section Checklist

- Identify and describe the actions to coordinate evacuations and sheltering-in-place for all segments of the population, including children, individuals with disabilities and others with access and functional needs.
- Describe the protocols and criteria to decide when to recommend evacuation or sheltering-in-place.
- Describe the conditions necessary to initiate an evacuation or sheltering-in-place and identify who has the authority to initiate such action.
- Identify and describe the actions to conduct the evacuation (e.g., of high-density areas, neighborhoods, high-rise buildings, subways, airports, schools, special events venues, areas with a high concentration of children and individuals with disabilities) and to provide security for the evacuation area.
- Identify and describe the actions to perform advanced/early evacuation, which is often necessary to accommodate children and others with mobility issues.
- Identify and describe the actions to provide safe evacuation/transportation assistance to unaccompanied minors.
- Identify and describe the actions to track unaccompanied minors and reunify children with their families.
- Identify and describe the actions to protect at-risk groups and/or facilities (e.g., racial, ethnic, religious) in the event of a terrorism alert.
- Describe the plan for receiving evacuees as a result of hazards in neighboring jurisdictions, including household pets and service animals.
- Describe the methods to keep children and others with disabilities with their caregivers, mobility devices, other durable medical equipment and/or service animals during an evacuation.
| 2590 | Identify and describe the actions to exchange registration and tracking information between and among the evacuating jurisdiction, the receiving jurisdiction(s) and the jurisdictions that evacuees pass through. |
| 2591 | Describe the coordination strategies for managing and possibly relocating incarcerated persons during a crisis response. |
| 2592 | Describe how and when the public is notified (including individuals with sensory disabilities and individuals with limited English proficiency), explaining the actions they may be advised to follow during an evacuation, while sheltering-in-place, upon the decision to terminate sheltering-in-place and throughout the incident. |
| 2593 | Describe the protocols and criteria the jurisdiction uses to terminate sheltering-in-place operations. |
| 2594 | Identify and describe the actions to identify and assist evacuees, including individuals with disabilities and others with access and functional needs. |
| 2595 | Instruct evacuees on how to manage their household pets and service animals during an evacuation and in returning home when permitted. |
| 2596 | Identify and describe the actions to provide for the care of the evacuees’ household pets. |
| 2597 | Describe how agencies coordinate the decision to return evacuees to their homes, including informing evacuees about any health or physical access concerns or actions they should take when returning to homes/businesses. |
| 2598 | Identify and describe the actions to identify and assist the return of evacuees to their homes/communities, including individuals with disabilities and others with access and functional needs. |
| 2599 | Identify and describe actions when the general public refuses to evacuate (e.g., implement forced removal, contact next of kin, place unique markings on homes, take no action). |
| 2600 | Identify and describe the actions to make sufficient, timely and accessible transportation available to evacuate children and other individuals with access and functional needs whose families do not have their own transportation resources. |
| 2601 | Describe the means and methods for collecting and consolidating evacuation transportation requests from schools, individuals with disabilities and others with access and functional needs. |
| 2602 | Describe the means of tracking, recording, and monitoring incoming transportation requests as they are fulfilled. |
| 2603 | Describe how the jurisdiction identifies accessible transportation resources (including paratransit service vehicles, school buses, municipal surface transit vehicles, drivers and/or trained attendants) that can provide needed services during an evacuation. |
| 2604 | Describe how household pet owners determine the location of congregate household pet shelters and which shelter to use. |
Describe methods of transportation for household pets or service animals whose owners depend on public transportation.

Describe how the jurisdiction registers, documents and tracks household pets that receive evacuation assistance and reunites them with their owners if they are separated during assisted evacuations.

PRIVATE SECTOR COORDINATION

Private Sector Coordination Section Checklist

Describe the processes to effectively coordinate and integrate with the private sector, both for-profit and not-for-profit, engaged in incident response and recovery activities.

Describe the processes to share situational awareness across sectors and between the jurisdiction and the private sector.

Describe the processes for coordinating with business, industry and critical infrastructure owners and operators to determine resource requirements and how supply chain disruptions affect resource management.

Describe the process for identifying private sector capabilities and resources that help address supply chain gaps.

Describe the process for tracking and addressing requests for information and requests for assistance from critical infrastructure owners and operators.

Describe the process for understanding the cascading effects of damaged infrastructure systems in the community.

PUBLIC ALERT AND WARNING

Public Alert and Warning Section Checklist

Identify and describe the actions to disseminate the notification that a disaster or threat is imminent or has occurred and how to communicate response and protective actions to the population (e.g., use alerting systems and IPAWS to send WEA mobile phone broadcasts, activate EAS radio/TV/cable messages, mass notification voice and SMS distribution, door-to-door warning, sirens, social media).

Describe the use of emergency condition levels in the public notification process (e.g., snow emergencies, HAZMAT incidents, nuclear power plant incidents).

Identify and describe the actions to alert individuals with sensory or cognitive disabilities and others with access and functional needs in the workplace, public venues and in their homes.

Include draft messages for identified hazards in formats appropriate for each public warning system planned for communications to the population.
PUBLIC HEALTH AND MEDICAL SERVICES

Public Health

Public Health Section Checklist

- Describe the agencies and methods to maintain efficient surveillance systems supported by information systems to facilitate early detection, reporting, mitigation and evaluation of expected and unexpected public health conditions.

- Describe the agencies and methods to identify the public health issues that the disaster creates (e.g., food/water safety, biological concerns) and to prioritize how to manage issues, including how this process is coordinated with the incident command post/EOC (e.g., issue vaccinations, establish quarantines).

- Describe the agencies and alternate methods to provide potable water, bulk water and temporary water distribution systems to the jurisdiction when the water systems are not functioning (e.g., private sources, boil orders, private wells).

- Describe the agencies and methods to provide alternate sources for human waste disposal (e.g., arrange portable latrines, encourage resource sharing with those who have their own septic systems).

- Identify the lead agency for providing health and medical support to individuals with disabilities and others with access and functional needs.

- Describe the mechanisms or processes to effectively identify individuals with specific health-related needs, including children and families who need additional assistance, individuals with disabilities and others with access and functional needs, in advance of, during and following an emergency.

- Identify and describe the actions to secure medical records to enable children with disabilities and/or other specific health care needs, as well as individuals with disabilities and others with access and functional needs, to receive health care and sustained rehabilitation in advance of, during and following an emergency.

- Identify and describe the actions to assess and provide mental health services for the general public (including individuals with disabilities and others with access and functional needs) that the disaster impacts.

- Identify and describe the actions to assess and provide vector control services (e.g., insect and rodent controls, biological wastes/contamination, use of pesticides).

- Identify and describe the actions to assess and provide food production and agricultural safety services (e.g., conducting a coordinated investigation of food and agricultural events or agricultural or animal disease outbreaks).

- Describe how the jurisdiction coordinates health professionals, incident commanders and public information officers to issue public health media releases and alert the media.
Identify and describe the actions to initiate, maintain and demobilize medical surge capacity, including MAAs for medical facilities and equipment.

Identify and describe the actions to assess and provide animal care services (e.g., remove and dispose of carcasses, rescue/recover displaced household pets/livestock, provide emergency veterinary care, treat endangered wildlife) and the individuals/agencies that the jurisdiction uses in this process (e.g., veterinarians, animal hospitals, Humane Society, state department of natural resources).

Identify and describe the actions to identify and respond to gravesites/cemeteries that the disaster impacts (e.g., recover and replace unearthed/floating/missing coffins, review records to confirm identification, manage closed/historical gravesites).

Describe how the jurisdiction coordinates with health professionals from outside agencies to support local response needs (e.g., poison control centers, state/local departments of health, Centers for Disease Control and Prevention, Funeral Directors Association, Department of Agriculture, Food and Drug Administration, Medical Reserve Corps).

Identify potential sources for medical and general health supplies for a disaster (e.g., medical equipment, pharmaceutical supplies, laboratories, toxicologists). Note: This information could be under a separate tab or part of a comprehensive resource manual.

Medical Patient Care/Mass Casualty/Mass Fatality

Medical Patient Care/Mass Casualty/Mass Fatality Section Checklist

Identify and describe the actions by emergency medical personnel to contain and stabilize a disaster (e.g., set up triage, provide initial treatment, identify access and functional needs, conduct/coordinate transport).

Identify and describe the actions to track patients from the incident scene through their courses of care.

Describe how emergency system patient transport and tracking systems are interoperable with national and Department of Defense systems.

Identify and describe the actions to coordinate with private agencies to support on-scene medical operations (e.g., air ambulance, private EMS), including staging and integrating those assets at the scene.

Identify and describe the actions to manage on-scene functions of mass casualty/fatality incidents (e.g., identifying bodies, expanding mortuary services, notifying next of kin).

Identify and describe the process for using hospitals, nursing homes and/or other facilities as emergency treatment centers or as mass casualty collection points.

Identify and describe the processes for identifying shortfalls in medical supplies (e.g., backboards, medicines) and durable medical equipment and acquiring additional resources either locally or from external sources.
<table>
<thead>
<tr>
<th>No.</th>
<th>Action</th>

</tbody>
</table>

### PUBLIC INFORMATION

**Public Information Section Checklist**

- Identify and describe the actions to provide continuous and accessible public information about the disaster (e.g., media briefings, press releases, website updates, IPAWS WEA and EAS, social media updates, mass notification text, email and voice messages to subscribers, door-to-door warnings), secondary effects and recovery activities.
- Identify and describe the actions to confirm that information provided by all sources includes the content necessary to enable reviewers to determine its authenticity and potential validity.
- Identify and describe plans, programs and systems to control rumors by correcting misinformation rapidly.
- Identify and describe the actions to inform individuals with sensory, intellectual or cognitive disabilities; individuals with limited English proficiency; and others with access and functional needs in the workplace, public venues and in their homes.
- Describe the role of a public information officer and the actions this person takes to coordinate public information releases (e.g., working with media at the scene, using a joint information center, coordinating information among agencies/elected and appointed officials), including household pet evacuation and sheltering information.
Describe how responders/local officials use and work with the media during an emergency (e.g., schedule press briefings; establish media centers on-scene; control access to the scene, responders and survivors).

Include prepared public instructions for identified hazards, including materials for managers of congregate care facilities, such as childcare centers, group homes, assisted living centers and nursing homes.

Identify and describe the actions to manage rumor control on- and off-scene (e.g., monitoring AM/FM radio, social media channels and television broadcasts).

Describe how the jurisdiction updates public statements on shelter capacity and availability as people and animals come to shelters.

List local media contacts and describe their abilities to distribute emergency information.

PUBLIC WORKS AND ENGINEERING/INFRASTRUCTURE RESTORATION

Public Works and Engineering/Infrastructure Restoration Section Checklist

Identify and describe the actions to determine qualified contractors offering recovery and restoration services.

Identify and describe the actions to coordinate credentialing protocols to give personnel access to critical sites following an incident.

Identify and describe the actions to identify, prioritize and coordinate repairing or restoring local roads, bridges and culverts (e.g., along city, county, township, state, interstate and U.S. routes).

Identify and describe the actions to repair or restore local water and wastewater systems (e.g., water and waste treatment plants, water and sewer lines, public and private wells), including providing temporary water distribution and wastewater collection systems until normal operations resume.

Identify and describe the actions to prioritize and coordinate the repair and restoration of services (e.g., gas, electric, phone), including conducting safety inspections before the general public is allowed to return to the impacted area.

Identify and describe the actions to incorporate and coordinate assistance from federal, state and private organizations (e.g., Federal Highway Administration, state building inspectors/contractors, state or local historical preservation office, private contractors).

Identify and describe the energy and utility problems that the incident is likely to create (e.g., downed power lines, wastewater discharges, ruptured underground storage tanks).

Identify and describe the actions to identify, prioritize and coordinate energy and utility problems that result from the incident (e.g., shut off gas and electricity to flooded areas, restore critical systems, control underground water and gas main breaks).
Identify and describe the actions to determine, prioritize and coordinate removing roadway debris to provide local responder access (e.g., removing snow and debris, clearing debris and ice from streams), including coordinating road closures and establishing alternate routes of access.

Identify and describe the actions to protect affected populations during a disaster with periods of extreme temperature and/or shortages of energy, including how the jurisdiction coordinates with energy-providing companies during outages.

Describe the methods to reestablish essential human services for children and their families, as well as individuals with disabilities and others with access and functional needs.

Damage Assessment

Damage Assessment Section Checklist

- Identify and describe the actions to conduct and coordinate damage assessments on private property (e.g., homeowners, businesses, renters).
- Identify and describe the actions to conduct and coordinate damage assessments on public property (e.g., government, private, not-for-profit).
- Identify and describe the actions to collect, organize and report damage information to other county, state or federal operations centers within the first 12 to 36 hours of the disaster or emergency.
- Identify and describe the actions to request supplemental state or federal assistance through the state emergency management agency.
- Include copies of the damage assessment forms that the jurisdiction uses (e.g., state-adopted or state-recommended emergency management agency’s damage and needs assessment form or a county equivalent). Note: These may be a tab to the plan.

Debris Management

Planners should see if their jurisdiction has specific planning guidance on developing a debris management program and subsequent plans.

Debris Management Section Checklist

- Identify and describe the actions to coordinate debris collection and removal (e.g., gather and recycle materials, establish temporary storage sites, sort/haul debris).
- Identify and describe the actions to communicate debris management instructions to the general public (e.g., separating/sorting debris, scheduled pickup times, drop-off sites for different materials), including issuing routine updates.
Identify and describe the actions to assess and resolve potential health issues related to debris removal (e.g., mosquito/fly infestation, hazardous and infectious wastes).

Identify locations (e.g., water and wastewater facilities) that need to be cleared of debris immediately to provide effective emergency services.

Identify and describe the actions to inspect, or arrange for inspecting, and subsequently dispose of contaminated food supplies (e.g., from restaurants, grocery stores).

Identify the agencies that the jurisdiction is likely to use to provide technical assistance on debris removal (e.g., state environmental protection agency, state department of health, state department of agriculture, local and surrounding county health departments).

Identify and describe the actions to condemn, demolish and dispose of structures that present a safety hazard to the public.

Pre-identify potential trash collection and temporary storage sites, including final landfill sites for specific waste categories (e.g., vegetation, food, dead animals, hazardous and infectious wastes, construction debris, tires/vehicles).

Identify contracting considerations and cost tracking requirements for potential reimbursement.

RECOVERY

Recovery Section Checklist

Describe the coordination mechanisms and requirements for post-incident assessments, plans and activities.

Describe the methods of identifying long-term recovery needs of individuals with disabilities and access and functional needs and incorporating these needs into recovery strategies.

Describe the methods of identifying community planning and capacity building issues for recovery.

Describe the methods of identifying economic recovery issues.

Describe the methods of identifying health and social services issues for recovery.

Describe the methods of identifying housing issues for recovery.

Describe the methods of identifying infrastructure systems issues for recovery.

Describe the methods of identifying natural and cultural resource issues for recovery.

Describe the methods of identifying long-term environmental restoration issues.

Describe the method of coordinating with animal welfare and agricultural stakeholders and service providers in long-term community recovery efforts.
SEARCH AND RESCUE

Search and Rescue Section Checklist

- Identify and describe the actions to conduct structural collapse (urban), waterborne, inland/wilderness and aeronautical search and rescue operations.
- Identify and describe the actions to monitor distress communications; locate distressed personnel; coordinate and execute rescue operations, including extrication or evacuation; and provisioning medical assistance and civilian services using public and private resources to assist persons and property in potential or actual distress.

TRANSPORTATION

Transportation Section Checklist

- Identify and describe the process for monitoring and reporting the status of, and damage to, the transportation system and infrastructure as a result of an incident.
- Describe alternative transportation solutions that the jurisdiction can implement when systems or infrastructure are damaged, unavailable or overwhelmed.
- Describe the methods to implement appropriate aviation, maritime, surface, railroad and pipeline incident management measures.
- Describe the method of coordinating the restoration and recovery of the transportation systems and infrastructure.

VOLUNTEER AND DONATIONS MANAGEMENT

Volunteer and Donations Management Section Checklist

- Describe the method by which the jurisdiction manages unaffiliated volunteers and unaffiliated organizations and applies those resources to incident response and recovery activities.
- Identify and describe the actions to establish and staff donation management functions (e.g., set up toll-free hotlines, create databases, appoint a donations liaison/office, use support organizations).
- Identify and describe the actions to verify and/or vet voluntary organizations and/or organizations operating relief funds.
- Identify and describe the actions to collect, sort, manage and distribute in-kind contributions, including methods for disposing of or refusing goods that are not acceptable.
- Identify and describe the actions to coordinate donation management issues with neighboring districts and the state’s donations management system.
☐ Describe the process to tell the general public about the donations program (e.g., instructions on items to bring and not bring, scheduled drop-off sites and times, the way to send monies), including a process for issuing routine updates.

☐ Identify and describe the actions to handle the spontaneous influx of volunteers.

☐ Identify and describe the actions to receive, manage and distribute cash contributions.

☐ Pre-identify sites that the jurisdiction is likely to use to sort and manage in-kind contributions (e.g., private warehouses, government facilities).

WORKER SAFETY AND HEALTH

Worker Safety and Health Section Checklist

☐ Describe the processes for response and recovery worker safety and health during incident response and recovery.

7.1.2. Annex Implementing Instructions

Each annex, as well as the base plan, may use implementing instructions in the form of SOPs/SOGs, maps, charts, tables, forms and checklists and may be included as attachments or references. The EOP planning team may use supporting documents, as needed, to clarify the contents of the plan or annex. For example, the evacuation annex may be clearer with attached maps marked with evacuation routes. Because these routes may change depending on the location of the hazard, the evacuation annex may also include hazard-specific maps. Similarly, maps showing the locations of shelters may support the mass care annex.

7.1.3. Special Preparedness Programs

Some jurisdictions participate in special preparedness programs that publish their own planning guidance. Two examples are the Chemical Stockpile Emergency Preparedness Program and the Radiological Emergency Preparedness Program. Participating jurisdictions should confirm that their EOPs meet the special planning requirements of these programs. Jurisdictions should decide whether this compliance is best accomplished by incorporating the requirements across functional annexes or by developing a hazard-specific annex for the program.

7.2. Hazard- or Threat-Specific Annexes

Hazard-, threat- or incident-specific annexes contain unique response details that apply to a specific threat or hazard. Depending on the EOP’s structure, functional annexes rather than hazard-specific annexes may include hazard-specific information.

Hazard- or incident-specific annexes describe emergency response strategies that apply to a specific hazard. The annexes usually identify hazard-specific risk areas and provide information such as
evacuation routes; special provisions and protocols for warning the public and disseminating
emergency public information; and specific types of protective measures, equipment and detection
devices for responders. The annexes may include maps, charts, tables, checklists, resource
inventories and summaries of critical information requirements, which can serve as work aids.

Hazard-specific operations information is typically in the CONOPS section and includes:

- Assessment and control of the hazard;
- Prevention and infrastructure protection activities;
- Public warnings;
- Selection and implementation of protective actions;
- Short-term stabilization actions; and
- Recovery actions.

Some hazards have unique planning requirements directed by specific state and federal laws. The
local emergency management agency must review those requirements and determine how the EOP
can best address and meet those legal requirements.

Local communities may choose to address specific hazards or threats in standalone plans rather
than annexes to an EOP base plan. In this case, the EOP should reference those plans and provide a
brief summary of how the EOP coordinates with the standalone plans.

7.3. Adversarial Threats

These are disasters that are intentionally created by humans with the intent of harming life,
information, operations, the environment and/or property.

7.3.1. Civil Unrest Annex

The annex identifies and describes the methods the jurisdiction uses to prepare for and respond to
civil unrest emergencies/disasters. It should also identify and describe the jurisdiction’s specific
concerns, capabilities, training, agencies and resources to mitigate against, prepare for, respond to
and recover from civil unrest emergencies.

7.3.2. Cyber Incident Annex

This annex identifies and describes the jurisdiction’s specific concerns, capabilities, training,
agencies and resources to respond to an intentional event occurring on or conducted through a
computer network that actually or imminently jeopardizes the confidentiality, integrity or availability
of computers; information or communications systems or networks; physical or virtual infrastructure
controlled by computers or information systems; or information resident on those systems. Notably,
cyber incidents can also result from accidents and unintentional system failures.
7.3.3. Terrorism Annex
The annex identifies and describes the jurisdiction’s specific concerns, capabilities, training, agencies and resources to prevent, protect against, prepare for, respond to and recover from terrorist acts. The attacks covered should include, but not be limited to, attacks involving weapons of mass destruction, such as CBRNE incidents.

Planners should confirm that the EOP complies with any state, territorial, tribal or insular area terrorism planning criteria. Some state emergency management agencies or homeland security offices have specific guidance for this planning element that establishes specific planning criteria, and jurisdictions should review it to develop the terrorism plan.

7.4. Natural Hazards

7.4.1. Biological Incident Annex
The annex identifies and describes the jurisdiction’s specific concerns, capabilities, training, agencies and resources to mitigate against, prepare for, respond to and recover from epidemic diseases and biological incidents (e.g., West Nile virus, hoof and mouth disease, smallpox). Include a hazard analysis summary that discusses where and how biological incidents are likely to impact the community.

7.4.2. Drought Annex
The annex identifies and describes the jurisdiction’s specific concerns, capabilities, training, agencies and resources to mitigate against, prepare for, respond to and recover from droughts (e.g., water conservation, public water outages and wildfire issues). Include a hazard analysis summary that discusses where and how droughts are likely to impact the jurisdiction.

7.4.3. Earthquake Annex
The annex identifies and describes the jurisdiction’s specific concerns, capabilities, training, agencies and resources to mitigate against, prepare for, respond to and recover from earthquakes. Include a hazard analysis summary that discusses where and how earthquakes are likely to impact the jurisdiction.

7.4.4. Flood Annex
The annex identifies and describes the jurisdiction’s specific concerns, capabilities, training, agencies and resources to mitigate against, prepare for, respond to and recover from flood emergencies or disasters (e.g., flash floods, inundation floods, floods resulting from ice jams). Include a hazard summary that discusses where (e.g., 100-year and common floodplains) and how floods are likely to impact the jurisdiction.
7.4.5. Hurricanes/Severe Storm Annex
The annex identifies and describes the jurisdiction’s specific concerns, capabilities, training, agencies and resources to mitigate against, prepare for, respond to and recover from hurricanes or severe storms. Include a hazard analysis summary that discusses where and how hurricanes or severe storms are likely to impact the jurisdiction.

7.4.6. Tornado Annex
The annex identifies and describes the jurisdiction’s specific concerns, capabilities, training, agencies and resources to mitigate against, prepare for, respond to and recover from tornadoes. Include a hazard analysis summary that discusses where and how tornadoes are likely to impact the jurisdiction (e.g., historical/seasonal trends, damage levels F1 through F5).

7.4.7. Winter Storm Annex
The annex identifies and describes the jurisdiction’s specific concerns, capabilities, training, agencies and resources to mitigate against, prepare for, respond to and recover from winter storms (e.g., blizzards, ice jams, ice storms). Include a hazard analysis summary that discusses where and how winter storms are likely to impact the jurisdiction.

7.5. Technological Hazards
These incidents involve materials created by humans and that pose a unique hazard to the general public and environment. The jurisdiction needs to consider incidents that are caused by accident (e.g., mechanical failure, human mistake), result from an emergency caused by another hazard (e.g., flood, storm) or are caused intentionally.

7.5.1. Dam and Levee Emergency Annex
The annex identifies and describes the jurisdiction’s specific concerns, capabilities, training, agencies and resources to mitigate the effects of dam and levee failures and other incidents that have the potential to harm downstream populations and/or infrastructure. Uncontrolled release or excessive controlled release of water from a dam may be from damage to or failure of the structure, flood conditions unrelated to failure or any condition that could affect safe operation. The release of water might endanger human life, downstream property or the operation of the structure.

7.5.2. Hazardous Materials Spill Annex
The annex identifies and describes the procedures and methods to prepare for and respond to releases that involve HAZMAT that is manufactured, stored or used at fixed facilities or in transport (if not addressed in a functional annex). This annex may include materials that exhibit incendiary or explosive properties when released.
Some states have laws that require each LEPC to develop a chemical emergency preparedness and response plan on this topic. Some states have laws requiring the local emergency management agency to incorporate the LEPC’s plan into the emergency management agency’s planning and preparedness activities. Organizations must review and address the state emergency response commission’s specific planning criteria:

- For LEPCs that develop standalone plans, describe how the jurisdiction coordinates that plan with the EOP.
- For LEPC plans that are part of the EOP, describe how the planning team used and adhered to the state emergency response commission criteria to comply with those requirements and the EOP requirements discussed previously.

### 7.5.3. Lethal Chemical Agents and Munitions Annex

The annex identifies and describes the jurisdiction’s specific concerns, capabilities, training, agencies and resources to mitigate against, prepare for, respond to and recover from lethal chemical agent and munitions incidents (e.g., sarin, mustard and VX gas). Include a hazard analysis summary that discusses where and how chemical agent incidents are likely to impact the community.

### 7.5.4. Power Outage Incident Annex

This annex identifies and describes the jurisdiction’s response and recovery actions in the wake of a widespread power outage that lasts for days or weeks. This annex does not define the steps needed to restore electricity, but rather focuses on steps that the community would take to manage the impacts that a sustained loss of power would likely trigger.

### 7.5.5. Radiological Incident Annex

The annex identifies and describes methods to prepare for and respond to releases that involve radiological materials that are at licensed facilities or in transport. Identify and describe the jurisdiction’s specific concerns, capabilities, training, agencies and resources to mitigate against, prepare for, respond to and recover from radiological hazards. Include a hazard analysis summary that discusses where and how radiological materials are likely to impact the jurisdiction, including incidents that occur at fixed facilities, along transportation routes or as fallout from a nuclear weapon. If applicable, address the requirements of NUREG-0654 FEMA-REP-1 Rev. 2 and Code of Federal Regulations Part 44, Section 350 as it applies to the jurisdiction’s planning for emergencies/disasters involving regulated nuclear power plants.

---

7.6. Additional Hazards (as Applicable)

Add additional annexes to include other hazards that the jurisdiction’s hazard analysis identified (e.g., mass casualty, plane crash, train crash/derailment, school emergencies). Identify and describe the jurisdiction’s specific concerns, capabilities, training, agencies and resources to mitigate against, prepare for, respond to and recover from other hazards as defined in the jurisdiction’s hazard analysis. Include a hazard analysis summary that discusses where and how this hazard’s incidents are likely to impact the community.

Appendix C: Glossary

Access and Functional Needs. Individuals having access and functional needs may include, but are not limited to, people with disabilities, older adults, and individuals with limited English proficiency, limited access to transportation, and/or limited access to financial resources to prepare for, respond to, and recover from the emergency. Federal civil rights law and policy require nondiscrimination, including on the bases of race, color, national origin, religion, sex, age, disability, English proficiency, and economic status. Many individuals with access and functional needs are protected by these provisions.

Capabilities-Based Planning. Planning, under uncertainty, to provide capabilities suitable for a wide range of threats and hazards while working within an economic framework that necessitates prioritization and choice. Capabilities-based planning addresses uncertainty by analyzing a wide range of scenarios to identify required capabilities.

Community. A political or geographical entity that has the authority to adopt and enforce laws and ordinances for the area under its jurisdiction. In most cases, the community is an incorporated town, city, township, village or unincorporated area of a county. However, each state defines its own political subdivisions and forms of government.

Community Lifeline. A means of identifying, grouping, evaluating and reporting on the status of government and business functions that are essential to the health, safety and economic security of the community.

Continuity. The ability to provide uninterrupted services and support while maintaining organizational viability, before, during and after an incident that disrupts normal operations.

Damage Assessment. Appraising or determining the number of injuries and deaths, damage to public and private property and status of key facilities and services (e.g., hospitals and other health care facilities, fire and police stations, communications networks, water and sanitation systems, utilities, transportation networks) resulting from a human-caused or natural disaster.

Disability. Individual who has a physical or mental impairment that substantially limits one or more major life activities (an “actual disability”), or a record of a physical or mental impairment that substantially limits a major life activity (“record of”), or an actual or perceived impairment, whether or not the impairment limits or is perceived to limit a major life activity, that is not both transitory and minor (“regarded as”). and specific changes to the text of the Americans with Disabilities Act. State laws and local ordinances may also include individuals outside the federal definition.

Emergency Operations Center. The physical location where the coordination of information and resources to support incident management activities (on-scene operations) normally takes place. An
EOC may be a temporary facility or located in a more central or permanently established facility, perhaps at a higher level of organization within a jurisdiction.

**Emergency Operations Plan.** A plan for responding to a variety of potential hazards.

**Emergency Support Function.** A grouping of governmental and certain private sector capabilities into an organizational structure to provide capabilities and services that are needed to manage domestic incidents.

**Federal Coordinating Officer.** The official appointed by the President to execute Stafford Act authorities, including the commitment of FEMA resources and mission assignments of other federal departments or agencies. In all cases, the federal coordinating officer represents the FEMA Administrator in the field to discharge all FEMA responsibilities for the response and recovery efforts underway. For Stafford Act incidents, the federal coordinating officer is the primary federal representative with whom the state coordinating officer and other response officials interface to determine the most urgent needs and to set objectives for an effective response in collaboration with the unified coordination group.

**Governor’s Authorized Representative.** An individual empowered by a governor to: (1) execute all necessary documents for disaster assistance on behalf of the state, including certifying applications for public assistance; (2) represent the governor of the impacted state in the unified coordination group, when required; (3) coordinate and supervise the state disaster assistance program, to include serving as its grant administrator; and (4) identify, in coordination with the state coordinating officer, the state’s critical information needs for incorporation into a list of essential elements of information.

**Incident.** An occurrence, natural or human-caused, that necessitates a response to protect life or property. In this document, the word “incident” includes planned events as well as emergencies and/or disasters of all kinds and sizes.

**Incident Command System.** A standardized approach to the command, control and coordination of on-scene incident management, providing a common hierarchy within which personnel from multiple organizations can be effective. ICS combines procedures, personnel, facilities, equipment and communications within a common organizational structure to aid in the management of on-scene resources during incidents. It is used for all kinds of incidents and is applicable to small, as well as large and complex, incidents, including planned events.

**Incident Management Assistance Team.** A team of ICS-qualified personnel configured according to ICS that deploys in support of affected jurisdictions and/or on-scene personnel.

**Incident Management Team.** A rostered group of ICS-qualified personnel consisting of an incident commander, command and general staff and personnel assigned to other key ICS positions.

**Incident Action Plan.** An oral or written plan containing the objectives established by the incident commander or unified command and addressing tactics and support activities for the planned operational period, generally 12 to 24 hours.
Joint Field Office. The primary federal incident management field structure. The JFO is a temporary federal facility that provides a central location for coordinating organizations with primary responsibility for response and recovery, including state, local, territorial, tribal, insular area and federal governments and private sector and nonprofit organizations.

Joint Information Center. A facility in which personnel coordinate incident-related public information activities. The JIC serves as the central point of contact for all news media. Public information officials from all participating agencies co-locate at, or virtually coordinate through, the JIC.

Jurisdiction. Jurisdiction has more than one definition. Each use depends on the context:

- A range or sphere of authority. Public agencies have jurisdiction at an incident related to their legal responsibilities and authority. Jurisdictional authority at an incident can be political or geographical (e.g., city, county, tribal, state or federal boundary lines) or functional (e.g., law enforcement, public health).

- A political subdivision (e.g., federal, state, county, parish, municipality) with the responsibility for public safety, health and welfare within its legal authorities and geographic boundaries.

Lifeline. See “Community Lifeline.”

Local Government. A county, municipality, city, town, township, local public authority, school district, special district, intrastate district, council of governments (regardless of whether the council of governments is incorporated as a not-for-profit corporation under state law), regional or interstate government entity or agency or instrumentality of a local government; a rural community, unincorporated town or village or other public entity.

Mass Care. Actions to protect evacuees and other disaster survivors from the effects of a disaster. Activities include mass evacuation, mass sheltering, mass feeding, supporting access and functional needs and coordinating household pets and service animals.

Mitigation. Activities providing a critical foundation in the effort to reduce the loss of life and property from natural and/or human-caused disasters by avoiding or lessening the impact of a disaster and providing value to the public by creating safer communities. Mitigation seeks to lessen the severity of the cycle of disaster damage, reconstruction and repeated damage. Mitigation activities or actions, in most cases, have a long-term sustained effect.

National Incident Management System. A systematic, proactive approach to guide all levels of government, nonprofits and the private sector to work together to prevent, protect against, mitigate, respond to and recover from the effects of incidents. NIMS provides stakeholders across the whole community with the shared vocabulary, systems and processes to successfully deliver the capabilities described in the National Preparedness System. NIMS provides a consistent foundation for dealing with all incidents, ranging from daily occurrences to incidents requiring a coordinated federal response.
National Response Framework. A comprehensive, national, all-hazards approach to domestic incident response. It serves as a guide to enable responders at all levels of government and beyond to provide a unified national response to a disaster. It defines the key principles, roles and structures that organize the way U.S. jurisdictions plan and respond.

Nonprofit Organization. A group that is based on the interests of its members, individuals or institutions. A nonprofit is not created by a government, but it may work cooperatively with government. Examples of nonprofits include faith-based groups, relief agencies, organizations that support people with access and functional needs and animal welfare organizations.

Planning Assumptions. Parameters that are expected and used as a context, basis or requirement for developing response and recovery plans, processes and procedures. If a planning assumption is not valid for a specific incident’s circumstances, the plan may not be adequate for response success. Alternative methods may be needed. For example, if a decontamination capability is based on the planning assumption that the facility is not within the zone of release, this assumption should be verified at the beginning of the response.

Prevention. The capabilities necessary to avoid, prevent or stop a threatened or actual act of terrorism. In national preparedness guidance, “prevention” refers to preventing imminent threats.

Protected Group. A group of people qualified for special protection by a law, policy or similar authority. For example, Title VI of the Civil Rights Act of 1964 protects against discrimination on the grounds of race, color or national origin.

Protection. The capabilities necessary to secure the homeland against acts of terrorism and human-caused or natural disasters.

Recovery. The capabilities necessary to assist communities affected by an incident to recover effectively.

Resource Management. Systems for identifying available resources at all jurisdictional levels to enable timely, efficient and unimpeded access to resources needed to prepare for, respond to or recover from an incident.

Response. The capabilities necessary to save lives, protect property and the environment and meet basic human needs after an incident has occurred.

Scenario. Hypothetical situation composed of a hazard, an entity impacted by that hazard and associated conditions, including consequences when appropriate.

Scenario-Based Planning. A planning approach that uses a hazard vulnerability assessment to assess the hazard’s impact on an organization based on various threats that the organization could encounter. These threats (e.g., hurricane, terrorist attack) become the basis of the scenario(s).
Service Animal. Any guide dog, signal dog or other animal individually trained to assist an individual with a disability. Service animals’ jobs include, but are not limited to:

- Guiding individuals with impaired vision;
- Alerting individuals with impaired hearing (to intruders or sounds such as a baby’s cry, the doorbell and fire alarms);
- Pulling a wheelchair;
- Retrieving dropped items;
- Alerting people of impending seizures; and
- Assisting people who have mobility disabilities with balance or stability.

Standard Operating Procedure/Guideline. A reference document or operations manual that provides the purpose, authorities, duration and details for the preferred method of performing a single function or several interrelated functions in a uniform manner.

State Coordinating Officer. The individual appointed by the governor to coordinate state disaster assistance efforts with those of the federal government. The state coordinating officer plays a critical role in managing the state response and recovery operations following Stafford Act declarations. The governor of the affected state appoints the state coordinating officer, and lines of authority flow from the governor to the state coordinating officer, following the state’s policies and laws.
Appendix D: Examples of Access and Functional Needs

This appendix provides many examples of common access and functional needs. It represents feedback received from whole community partners during the most recent revision of CPG 101, as well as the collective experience of the Nation’s emergency management community. Individuals with access and functional needs include, but are not limited to, the list of partners outlined below.

- Caregivers;
- Children in special education;
- Children, infants and unaccompanied minors;
- Diverse racial and ethnic populations;
- Elderly and older adults;
- Families using supported decision-making or guardianship;
- Homeless individuals;
- Immigrants;
- Incarcerated individuals, people in jails or prison, people on parole;
- Individuals with:
  - Cognitive and intellectual complex mental health needs;
  - Limited cultural and linguistic competency;
  - Household pets;
  - Emotional support or therapy animals;
  - Limited or no transportation resources or who need public transportation to access essential services, commodities and resources;
  - Little or no trust in government; and
  - Special dietary concerns (e.g., life-threatening food allergies, fed by tube);
- Individuals requiring:
  - Durable medical and backup power suppliers; and
  - Power for ventilators or other life-sustaining/assistive technology.

Step 5 of the planning process centers on preparing and reviewing plans developed by jurisdictions. At a high level, plan reviews typically center on their adequacy, feasibility, acceptability, completeness and compliance. They also account for core elements of EOPs in base plans and various annexes.

An integral part of plan preparation and review is confirming that plans account for children, individuals with access and functional needs and household pets and service animals. Table 1 includes important considerations for planning for these groups.

The sections that follow provide checklists on each of these topics.

Incorporating Children

This section highlights the following considerations for incorporating children into EOPs: preparedness, evacuation support, shelter operations and public information and outreach.37

Preparedness

Preparedness Considerations for Children Checklist

☐ Identify roles and responsibilities for supporting children.

☐ Use a planning group that includes individuals with expertise in pediatric issues, as well as relevant advocacy groups, service providers and subject matter experts.

☐ Include demographic data and information on the number of children and where they tend to be (e.g., schools, daycare facilities).

☐ Identify the agency with the lead role for coordinating planning efforts and incorporating children into all plans.

☐ Identify support agencies to assist the lead agency in coordinating planning efforts and confirming plans incorporate children.

Identify a coordinator to provide expertise for the emergency planning process and to support the incident commander, the planning section and/or the operations section during an emergency.

Include mechanisms or processes to effectively identify children and families who need additional assistance with specific health-related needs in advance of, during and following an emergency.

Include mechanisms or processes to secure medical records to enable children with disabilities and/or other specific health care needs to receive health care and sustained rehabilitation in advance of, during and following an emergency.

Identify which position/agency is authorized to direct supporting departments and agencies to furnish materials and commodities for children with disabilities and/or other specific health care needs.

Identify essential human services and ways to reestablish these services following a disaster for children and their families.

Prioritize governmental, nonprofit and private sector resources to meet critical needs such as accessible housing, rental assistance, debris removal and emergency repairs for families of children with specific health care needs.

Describe how to vet, train and use spontaneous volunteers who may offer their services to families with children.

Include mechanisms or processes for providing emergency childcare services.

Include mechanisms or processes for reunifying children with families.

Conduct exercises that include children and child congregate care settings, such as school, childcare, child welfare and juvenile justice facilities.

Evacuation Support

Evacuation Support Considerations for Children Checklist

Identify which official has the authority to order an evacuation.

Identify the roles and responsibilities for advanced/early evacuation, which is often necessary to accommodate children with mobility issues.

Identify the agency that has the lead role in coordinating an evacuation and incorporating children into all evacuation considerations and planning.

Include mechanisms or processes for providing safe evacuation/transportation assistance to unaccompanied minors.

Include mechanisms or processes for tracking children, especially unaccompanied minors, during an evacuation.
Include affirmative recognition of the need to keep children with disabilities with their caregivers, mobility devices, other durable medical equipment and/or service animals during an evacuation.

Include mechanisms or processes to provide sufficient and timely accessible transportation to evacuate children with disabilities whose families do not have their own transportation resources.

Identify means and methods to collect and consolidate evacuation transportation requests from schools, specifically schools with children who have disabilities.

Identify means to track, record and monitor incoming transportation requests as they are fulfilled.

Identify accessible transportation resources (including paratransit service vehicles, school buses, municipal surface transit vehicles, drivers and/or trained attendants) that can provide needed services during an evacuation.

Include mechanisms or processes to reunify children with families.

Address re-entry.

Shelter Operations

Shelter Operations Considerations for Children Checklist

Identify which official has the authority to order an evacuation.

Include mechanisms or processes for providing adequate accessible shelters that fully address the requirements of children, including those with medical needs.

Allocate adequate shelter space for families who have children with access and functional needs who may need additional space for assistive devices (e.g., wheelchairs, walkers).

Plan for sufficient developmentally appropriate supplies (e.g., diapers, formula, age-appropriate foods), staff, medicines, durable medical equipment and supplies needed during an emergency for children with disabilities and other special health care needs.

Include mechanisms or processes for handling and providing for unaccompanied minors in shelters.

Public Information and Outreach

Public Information and Outreach Considerations for Children Checklist

Identify ways to promote personal preparedness among children, as well as their families and caregivers (including school and daycare personnel).
Identify mechanisms for disseminating timely and accessible emergency public information using multiple methods (e.g., television, radio, internet, sirens) to reach families of children with sensory and cognitive disabilities, as well as families with limited English proficiency.

Incorporating Individuals with Access and Functional Needs

This section highlights the following considerations for incorporating individuals with access and functional needs into EOPs: preparedness, evacuation support, shelter operations and public information and outreach.

Preparedness

Preparedness Considerations for Individuals with Access and Functional Needs Checklist

- Use a planning group that includes individuals with disabilities and others with access and functional needs, as well as relevant advocacy groups, service providers and subject matter experts.
- Include a definition for “individuals with disabilities” and “individuals with access and functional needs,” consistent with all applicable laws.
- Include demographic data and information on the number of individuals in the community with disabilities and others with access and functional needs (using assessment and current registry data, if available).
- Identify the agency with the lead role for coordinating planning efforts and incorporating individuals with access and functional needs into all plans.
- Identify support agencies to assist the lead agency in coordinating planning efforts and confirming that plans incorporate individuals with access and functional needs.
- Identify a disability advisor to provide expertise for the emergency planning process and to support the incident commander, the planning section and/or the operations section during an emergency.
- Include mechanisms or processes to effectively identify people who need additional assistance and their specific health-related needs in advance of, during and following an emergency.
- Include mechanisms or processes to secure medical records to enable persons with disabilities or access and functional needs and acute health care needs to receive health care and sustained rehabilitation in advance of, during and following an emergency.
- Identify which position/agency is authorized to direct supporting departments and agencies to furnish materials and commodities for individuals with disabilities and others with access and functional needs.
Identify essential human services and ways to reestablish these services following a disaster for individuals with disabilities and others with access and functional needs to enable individuals to regain and maintain their previous level of independence and function.

Identify roles and responsibilities for supporting individuals with disabilities and others with access and functional needs.

Prioritize governmental, nonprofit and private sector resources to meet critical needs such as accessible housing, rental assistance, debris removal and emergency repairs for individuals with disabilities and others with access and functional needs.

Include mechanisms or processes to train and use spontaneous volunteers who may offer their services to individuals with disabilities and others with access and functional needs to assist with physical, programmatic and communications access and other functional needs.

Evacuation Support

Evacuation Considerations for Individuals with Access and Functional Needs Checklist

Identify which official has the authority to order an evacuation.

Identify the roles and responsibilities for advanced/early evacuation, which is often necessary to accommodate persons with mobility issues.

Identify the agency that has the lead role in coordinating an evacuation and incorporating individuals with disabilities and others with access and functional needs into all evacuation considerations and planning.

Include affirmative recognition of the need for people with disabilities to keep their support systems, mobility devices, other durable medical equipment and/or service animals during an evacuation.

Include mechanisms or processes to provide sufficient and timely accessible transportation to evacuate individuals with disabilities and others with access and functional needs who do not have their own transportation resources.

Identify means and methods to collect and consolidate evacuation transportation requests from individuals with disabilities and others with access and functional needs.

Identify means for tracking, recording and monitoring incoming transportation requests as they are fulfilled.

Identify accessible transportation resources (including paratransit service vehicles, school buses, municipal surface transit vehicles, drivers and/or trained attendants) that can provide needed services during an evacuation.

Address re-entry.
Shelter Operations

**Shelter Operations Considerations for Individuals with Access and Functional Needs Checklist**

- Include mechanisms or processes to confirm that general population shelters are accessible and fully address the physical, programmatic and communications accessibility requirements of individuals with disabilities and others with access and functional needs.
- Allocate adequate shelter space for individuals with disabilities and others with access and functional needs who may need additional space for assistive devices (e.g., wheelchairs, walkers).
- Include mechanisms or processes for confirming that Americans with Disabilities Act Accessibility Guidelines govern the shelter site selection and operation.
- Plan for sufficient staff, medicines, durable medical equipment and supplies needed during an emergency for individuals with disabilities and others with access and functional needs.

Public Information and Outreach

**Public Information and Outreach Considerations for Individuals with Access and Functional Needs Checklist**

- Identify ways to promote personal preparedness among individuals with disabilities and others with access and functional needs, as well as their families and service providers.
- Identify mechanisms for disseminating timely and accessible emergency public information using multiple methods (e.g., IPAWS, social media, email/text/phone calls, traditional media) to reach individuals with sensory, intellectual and cognitive disabilities, as well as individuals with limited English proficiency.

Incorporating Household Pets and Service Animals

This section highlights the following considerations for incorporating household pets and service animals into EOPs: preparedness, evacuation support, shelter operations, registration and animal intake, animal care, public information and outreach and record keeping.

Preparedness

**Preparedness Considerations for Household Pets and Service Animals Checklist**

- Describe the partnership between the jurisdiction’s emergency management agency, the animal control authority, the mass care provider(s) and the owner of each proposed congregate household pet sheltering facility.
Establish or refer to an MOA, MOU or MAA that defines the roles and responsibilities of each organization involved in household pet and service animal response.

Confirm that organizations with agreed-upon responsibilities in the plan have operating procedures that govern their mobilization and actions.

Recommend just-in-time training for spontaneous volunteers and out-of-state responders.

Encourage household pet owners and service animal owners to arrange private accommodations for themselves and their household pets and service animals prior to a disaster or emergency situation.

### Evacuation Support

**Evacuation Support Considerations for Household Pets and Service Animals Checklist**

- Address the evacuation and transportation of household pets from their homes or by their owners or those household pets rescued by responders to congregate household pet shelters.
- Address how to inform owners of the locations of congregate household pet shelters and which shelter to use.
- Provide conveyance for household pets or service animals whose owners depend on public transportation.
- Address how to register, document and track household pets that receive evacuation assistance and reunite them with their owners if they are separated during assisted evacuations.

### Shelter Operations

**Shelter Operations Considerations for Household Pets and Service Animals Checklist**

- Identify the agency responsible for coordinating shelter operations.
- Provide guidance to human shelter operators on admitting and treating service animals.
- Identify an agency in the jurisdiction that regulates nonemergency, licensed animal facilities (e.g., animal control shelters, nonprofit household pet rescue shelters, private breeding facilities, kennels) as an information source to help identify needed resources.
- Establish criteria to expeditiously identify congregate household pet shelters and alternate facilities.
- Provide guidance about utilities, such as running water, adequate lighting, proper ventilation, electricity and backup power, at congregate household pet shelters.
Include mechanisms or processes to reduce/eliminate the risk of injury by an aggressive or frightened animal, the possibility of disease transmission and other health risks for responders and volunteers staffing a congregate household pet shelter.

Recommend a pre-disaster inspection and developing agreements for each congregate household pet facility.

Provide for the care and maintenance of each facility while in use as a shelter.

Identify equipment and supplies to operate each congregate household pet shelter, as well as supplies that household pet owners may bring with them to the congregate shelter.

Provide physical security for each congregate household pet facility, including perimeter controls and security personnel.

Identify how to accept donated resources (e.g., food, bedding, containers).

Identify how to acquire, store and secure food and water supplies.

Provide for the diverse dietary needs of household pets.

**Registration and Animal Intake**

**Registration and Animal Intake Considerations for Household Pets and Service Animals Checklist**

- Establish provisions to shelter unclaimed animals that cannot be immediately transferred to an animal control shelter.

- Provide a means to segregate or seize household pets showing signs of abuse.

- Identify the method to register household pets.

- Identify a method to install and reading microchips to rapidly and accurately identify household pets.

- Provide technical consultation/supervision by a veterinarian or veterinary technician as official responders.

- Identify how to confirm animals have a current rabies vaccination.

- Identify how to address the situation when non-eligible animals are brought to the shelter.\(^3^8\)

---

\(^3^8\) Planners should consult jurisdictional and federal disaster assistance policies to gather information on what animals qualify for reimbursable care.
### Animal Care

**Animal Care Considerations for Household Pets and Service Animals Checklist**

- Provide housing for a variety of household pet species (e.g., size of crate/cage, temperature control, appropriate lighting).
- Identify how to separate household pets based on appropriate criteria and requirements.\(^\text{39}\)
- Provide consultation by a veterinarian or animal care expert with household pet sheltering experience regarding facility setup and maintenance.
- Provide for the setup and maintenance of household pet confinement areas (e.g., crates, cages, pens) for safety, cleanliness and control of noise level.
- Recommend a household pet first aid area inside each shelter.
- Provide for the control of fleas, ticks and other pests at each congregate household pet shelter.
- Provide criteria for designating and safely segregating aggressive animals.
- Provide for the segregation or quarantine of household pets to prevent the transmission of disease.
- Recommend relocating a household pet to an alternate facility (e.g., veterinary clinic, animal control shelter) due to illness, injury or aggression.
- Recommend providing controlled areas (indoor or outdoor) for exercising dogs.
- Provide a method for disposing of household pet waste and dead animals.
- Provide a method to reunite rescued animals with their owners.
- Include mechanisms or processes to address the long-term care, permanent relocation or disposal of unclaimed household pets.

### Public Information and Outreach

**Public Information and Outreach Considerations for Household Pets and Service Animals Checklist**

- Provide mechanisms to continually update public statements on shelter capacity and availability as people and animals come to shelters.
- Provide a public education program.

Coordinate household pet evacuation and sheltering information with the jurisdiction’s public information officer or joint information center.

Communicate public information regarding shelter-in-place accommodation of household pets, if available.

Record Keeping

Record Keeping Considerations for Household Pets and Service Animals Checklist

Define the methods of pre- and post-declaration funding for the jurisdiction’s household pet and service animal preparedness and emergency response program.

Describe how to capture eligible costs for reimbursement by jurisdictional and federal disaster assistance programs.

Describe how to capture eligible donations for volunteer labor and resources.

Describe how to capture eligible donations for mutual aid resources.
