

# 2022 Building Code Adoption Tracking: FEMA Region 7

This fact sheet provides a high-level overview of the status of hazard-resistant building code adoption in each state and territory within a FEMA region. The regional fact sheets show an annual metric of the percent of communities adopting hazard-resistant<sup>1</sup> building codes.

## Why Building Codes?

Disaster resilience starts with building codes because they enhance public safety and property protection.

## Why Track Codes?

- Represent the best evidence for disaster resistance
- Create best overall return on investment
- Comply with [Technology Transfer Act](#)
- Cornerstone of effective mitigation to reduce losses in future disasters
- Codes = better built buildings, better performance
- Hazard codes for seismic, high winds, water and fire enable uniformity, efficiencies, and predictable performance
- Recognize the disaster preparedness of communities when determining level of federal funding

Figure 1. FEMA Region 7

## Purpose of Building Code Adoption Tracking

- Track the adoption rate of the latest consensus-based codes across the nation
- Track the results of adoption in improving disaster-resistant buildings in natural hazard areas
- Use the emerging data to inform FEMA policies and laws in pre-disaster and post-disaster goals
- Federal funding assistance requirements may be correlated to adoption of the latest published building code editions as required by legislation and/or FEMA policies such as the [Disaster Recovery Reform Act of 2018](#) and the associated Federal Cost Share Reform Incentive

<sup>1</sup> Hazard-resistant codes mean the 2018 or later International Building Code and International Residential Code, without weakening of any resilience provisions related to any of the five tracked hazards for which the jurisdiction is at high risk.

## FEMA’s Role Will Be Continuous

- Proposing building code changes to maintain consistency with the National Flood Insurance Program (NFIP) and to incorporate best practices identified in post-disaster investigations.
- Defending against changes that weaken flood, wind, and seismic provisions.
- Contributing to requests for interpretations by International Code Council.
- Supporting the training of state, local, tribal and territorial officials.

**Figure 2. Building Code Adoption Tracking Process**

The following percentages indicate the tracked jurisdictions which have adopted hazard-resistant<sup>2</sup> building codes within each state. The percentages are based upon jurisdictions within each state which are at high risk<sup>3</sup> to one or more hazard types (Region 7’s hazards are flood, damaging wind, tornado, and seismic):

### NEBRASKA

92.3%

HIGHER RESISTANCE

**IBC** State adopts the 2018 International Building Code (IBC).

**IRC** State adopts the 2018 International Residential Code (IRC).  
*Note that state deletes P2602.2 (General Plumbing Requirements - Flood-resistant installation), P2705.1 (Plumbing Fixtures - General), P3001.3 (Sanitary Drainage - Flood-resistant installation), and P3101.5 (Vents - Flood resistance). However, Section R322.1.6 offsets the deletion of P2601.3 and P2705.1. The other two deletions are offset by NFIP-compliant floodplain management ordinances.*

Note: State is not fully resistant because some jurisdictions with high flood risk do not participate in the NFIP.

<sup>2</sup> Hazard-resistant codes mean the 2018 or later IBC and IRC, without weakening of any resilience provisions related to any of the five tracked hazards for which the jurisdiction is at high risk.

<sup>3</sup> High-risk is defined according to national consensus-based standards, the National Flood Insurance Program, and the Building Code Effectiveness Grading Schedule. For a detailed description of the high-risk methodology, visit the FEMA Building Code Adoption Tracking landing page at [www.fema.gov/emergency-managers/risk-management/building-science/bcat/](http://www.fema.gov/emergency-managers/risk-management/building-science/bcat/).

## IOWA

10.4%

### LOWER RESISTANCE

IBC  
IRC

The (outdated) 2015 IBC is adopted statewide for certain types of buildings only. Jurisdictions are not required to adopt the IBC and may adopt any code or no code at all.

The (outdated) 2015 IRC is adopted statewide for certain types of buildings only. Jurisdictions are not required to adopt the IRC and may adopt any code or no code at all.

## MISSOURI

10.2%

### LOWER RESISTANCE

IBC  
IRC

No statewide IBC.

No statewide IRC.

## KANSAS

3.4%

### LOWER RESISTANCE

IBC  
IRC

State adopts an outdated IBC (2006 edition) for jurisdictions which do not have their own code adopted.

No statewide IRC.
