# Post-Wildfire Flood Risk and Sediment Reduction: Overview

\*The following information is intended for guidance only and is not a request for information. The following template is only intended to help the reader understand the FEMA Hazard Mitigation Grant Program (HMGP) application process.

**Purpose:** Application templates have been developed to provide step-by-step instructions for specific project types. This application is intended to be used for post-wildfire flood risk and sediment reduction projects, including modifying or removing culverts to allow drainage to flow freely, adding drainage dips and constructing emergency spillways to keep roads and bridges from washing out during floods, and constructing straw, rock, or log dams in small tributaries to prevent flooding. Mitigation projects are a long-term effort and require multiple steps. **Figure 1** shows the general process flow and decision points from a Major Presidential Disaster Declarations to grant award.

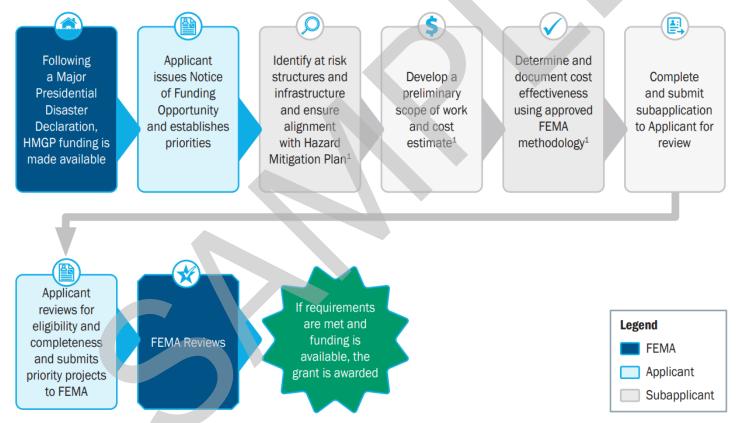

Figure 1: Generator Project Process Overview Notes:

(1) These activities may also occur prior to the Disaster Declarations and/or the Notice of Funding Opportunity.

Prior to starting an application, it is recommended that you review the summary of data requirements (**Table 1**) needed to complete the application. Early submission of accurate and complete eligibility and pre-award information will facilitate FEMA's review process and the release of Hazard Mitigation Grant Program (HMGP) funds.

The methodology—used to evaluate cost-effectiveness—will affect data requirements for the application. There are two methods to evaluate cost-effectiveness for a post-wildfire flood risk and sediment reduction project:

- Pre-calculated benefits: Pre-Calculated benefits may be used to demonstrate cost-effectiveness for post-wildfire flood diversion projects that meet specific criteria and documentation requirements. A post-wildfire flood diversion project must cost less than \$5,250 per acre. The allowable pre-calculated benefits value is the total number of acres being mitigated multiplied by the total benefits per acre.
- Benefit-cost analysis (BCA) using the BCA Toolkit via: Modeled Damages or Historical Damages.

Check the applicability of pre-calculated benefits prior to completing a BCA, as use of pre-calculated benefits will reduce data requirements.

## **Key Resources**

#### POST-WILDFIRE FLOOD RISK AND SEDIMENT REDUCTION PROJECT APPLICATION AND INSTRUCTIONS

This application form designed specifically for post-wildfire flood risk and sediment reduction projects, including modifying or removing culverts to allow drainage to flow freely, adding drainage dips and constructing emergency spillways to keep roads and bridges from washing out during floods, and constructing straw, rock, or log dams in small tributaries to prevent flooding. The accompanying instructions provide definitions, explanations, and clarification on the information requested in each section of the application. This step-by-step guidance references additional Job Aids and FEMA resources to help direct you to more detailed information, if needed.

## HAZARD MITIGATION TECHNICAL ASSISTANCE REVIEW | JOB AID SERIES, POST-WILDFIRE FLOOD RISK AND SEDIMENT REDUCTION TECHNICAL REVIEW

This Job Aid describe the requirements for the technical review process for Hazard Mitigation Assistance funded post-wildfire flood risk and sediment reduction projects and provide a step-by-step approach to addressing each of the major components of a post-wildfire flood risk and sediment reduction project application.

## HAZARD MITIGATION ASSISTANCE ENVIRONMENTAL PLANNING AND HISTORIC PRESERVATION (EHP) REVIEW | JOB AID SERIES, FLOOD RISK REDUCTION: INFORMATION REQUIRED FOR ENVIRONMENTAL REVIEW

This Job Aid provides detailed guidance regarding information that should be included for post-wildfire flood risk and sediment reduction project applications, including recommended documentation and supplemental information needed to help FEMA conduct an EHP review. This Job Aid categorizes the components considered within FEMA's EHP review process, describes the information needed under each component, identifies potential sources of documentation, and provides examples.
