Federal Evacuation Support Annex to the Response and Recovery Federal Interagency Operational Plans

January 2021
The Federal Evacuation Support Annex (FESA) is an annex to the Response and Recovery Federal Interagency Operational Plans (FIOPs). The FESA details federal evacuation support activities for “notice” or “no-notice” incidents, or high population immigration events and provides information to assist with the implementation of the Response and Recovery FIOPs. The mission addressed by this annex is the facilitation, synchronization, and integration of federal agency and whole community resources and capabilities with state and local evacuation operations, when necessary, in order to save lives, reduce human suffering, and meet basic human needs before, during, and after an evacuation. This annex includes planning assumptions, considerations, resources, capabilities, and issues that are unique to an evacuation and is supplemental to and not duplicative of the FIOPs and other subordinate plans. The FESA is composed of a base plan and appendices, three of which describe the following evacuee types: general population, patients, and animals.

Pre-incident evacuations occur when warning is available before an incident to move threatened populations away from a potential area of impact. The key advantage to pre-incident evacuations is that transportation resources and infrastructure are operating under steady-state conditions. Post-incident evacuations occur during or after an incident when it is unsafe for affected populations to remain in the incident area.

**Evacuee Population Types**

**General Population Evacuee**: The vast majority of the population expected to evacuate are general population evacuees. General population evacuees may possess the means to evacuate (e.g., self-evacuee), or may require accessible transportation and/or other assistance to evacuate (i.e., critical transportation needs evacuee).

- **Self-Evacuee**: Individuals who possess the capability or can obtain the resources to evacuate from a potentially dangerous area prior to, during, or after an incident.
- **Critical Transportation Needs Evacuee** (CTN): Individuals requiring accessible transportation and/or other assistance to leave a potentially dangerous or disaster-affected area.

**Patient Evacuee**: Includes people under the care of the Emergency Medical Services (EMS) system (e.g., prehospital emergency care, community para-medicine/mobile integrated healthcare), inpatient healthcare facilities (e.g., hospital, skilled nursing facility/nursing home, psychiatric facility) and outpatient homes and community-based healthcare services (e.g., home healthcare, dialysis, ambulatory surgery support) prior to, during, or after a disaster.

**Animal Evacuee**: Animals include household pets, assistance animals, working dogs, agricultural animals/livestock, wildlife, exotic animals, zoo animals, research animals, and animals housed in shelters, rescue organizations, breeding facilities, and sanctuaries. Service animals evacuate with their owners as part of either the general or patient populations.
General Concept of Operations

Evacuation and re-entry operations are a state and local responsibility. However, there are circumstances where requirements may exceed the capabilities of such jurisdictions to support mass evacuation operations. When practical and possible, emergency protective actions may be necessary before an event to move individuals away from a potential incident when warning is available and after an event when conditions are such that it is unsafe for individuals to remain in the area.

In instances where federal support is requested, FEMA will coordinate with the state/tribal government to determine the assistance needed for self-evacuees evacuating via ground, air, rail, and/or maritime transportation networks. The U.S. Department of Health and Human Services (HHS) will coordinate support for the evacuation of federally transported patients. FEMA, with support from USDA and other federal agencies, will coordinate federal support for the evacuation of animals. Federal support will be provided to state and local evacuation operations and will be scaled to the incident.

Critical Considerations Addressed in this Annex

**Evacuation Triggers and Timeline:** Depending on the threat or hazard, evacuation triggers and timelines will be different for pre-incident events versus post-incident events.

**Critical Infrastructure/Infrastructure Systems (IS):** A mass evacuation could directly affect critical infrastructure and IS operations, supply lines, and distribution systems.

**Public Information:** Stress and chaos often follow a mandated evacuation, which may have a negative impact on the safety of affected populations. Information in formats accessible to people with disabilities and in relevant languages for people with limited English proficiency is essential to evacuation support.

**Tracking/Reunification Services:** Responding to high volumes of requests for information from concerned family, friends, and legal guardians to locate children, adults, and animals within or near the impact area can burden emergency response operations.

**Evacuee Sustainability:** Adequate feeding/nutrition, hydration, medical, and sanitation/hygiene services will be required along evacuation routes for people and animals, including accommodation for evacuees with special consideration given to evacuees with disabilities and others with access and functional needs. There must be a designated rest stop(s) along an evacuation route staffed by mass care, medical and medical health providers, and security at a minimum to evaluate the population as they are evacuating.

**Evacuee Decontamination:** Without appropriate chemical or radiological decontamination and proof of chemical/radiological decontamination, neighboring states/jurisdictions may resist accepting evacuees (and their animals) that are or may have been contaminated. Decontamination must include accommodations for evacuees with disabilities and others with access and functional needs. Biologically contagious patients (e.g., Highly
Pathogenic Infectious Disease patients) may require containerized transport systems to safeguard transport crews and passengers.

**Geography and Environment:** Evacuations may affect jurisdictions situated in a broad range of geographies and environments, requiring specialized resources, support services, and strategies.

### Community Lifelines

![Diagram of Community Lifelines]

Prior to an incident that threatens the lives and safety of the community, the state may request federal assistance to evacuate the threatened population. For pre-incident (notice event), emergency managers must quickly assess impending threats to Community Safety to provide decision makers with the essential information required to take emergency *protective actions* such as evacuation.

### Evacuation Support Crisis Action Planning Team

A key discussion in this annex is federal evacuation support coordination. This annex describes the standard coordination structure of the National Response Coordination Center (NRCC), the agency, function, and location of the evacuation subject matter experts (SMEs). The second structure calls for the activation of a planning cell within the Planning Support Section (PSS) of the NRCC. Evacuation-specific SMEs would support deliberate and contingency planning efforts. The third structure would support the establishment of an evacuation support Crisis Action Planning (CAP) Team for an expected catastrophic Level I Activation for a notice/no-notice incident. The expected requirement to support evacuation operations would strain the existing structure of the National Response Coordination Staff (NRCS) and require additional agencies and Regional support. The CAP Team would serve as a national level coordination mechanism for evacuation operations and report to the Planning Section Chief.
COVID-19 Pandemic

In response to the novel coronavirus (COVID-19) pandemic, emergency managers should anticipate the added complexities of conducting response and recovery operations while taking preventative measures to protect the health and safety of disaster survivors and the disaster workforce. New guidance on social distancing and limitations on social gathering have been issued by public health officials to reduce the spread of the virus. With the presence of COVID-19 in the United States and the issuance of health and safety guidance, there are unique difficulties that challenge the ability to take emergency protective actions to evacuate and shelter a threatened population. Emergency managers are encouraged to update/modify current plans (e.g., Emergency Operations Plans (EOP)s, COOP Plans, All Hazards Plans, communications plans, and staffing plans) to include response planning within a pandemic environment. Challenges to evacuation and shelter operations to consider:

<table>
<thead>

Document Usage and Intended Audience

Approved audiences for this annex include agencies and officials of the Federal Government, as well as whole community partners involved in planning for and executing evacuation and re-entry operations. This annex provides guidance and serves as a reference for federal planning efforts involving evacuation, re-entry, and relocation operations. Although this annex provides guidance for the whole community, it focuses deliberately on the requirements of those who are involved in delivering core capabilities at the federal level. Non-federal stakeholders engaged in their own planning will find this document useful in enhancing their understanding of federal evacuation and re-entry support and ways in which their planning efforts can be complementary.

Rescission Notice

Publication of this annex to the Response and Recovery FIOPs rescinds the 2008 Mass Evacuation Incident Annex to the National Response Framework (NRF).

Introduction

Purpose

The purpose of this annex is to define the framework for federal support of coordinated, timely, and efficient evacuation operations by state and local jurisdictions. This annex defines the full spectrum of services required, from initiation of operations up through community service restoration and the return of evacuees to their pre-disaster residences. This annex:

✓ Provides an overview of evacuation key terms, concepts, functions, roles and responsibilities, and overall guidelines for the integration of federal and state, local, tribal, and territorial (SLTT) support in the evacuation of large numbers of people for incidents requiring a coordinated response.

✓ Describes the integration and synchronization of federal capabilities to support SLTT evacuations of survivors and animals, including household pets and service and assistance animals.

✓ Clarifies and de-conflict authorities, roles, and responsibilities of federal and national agencies and organizations involved in evacuation operations.

✓ Clarifies the Federal Government’s role in supporting re-entry operations.

✓ Describes a national-level decision-making structure for supporting evacuations.

✓ Facilitates deliberate and crisis action planning at the federal, regional, state, and territorial levels.

✓ Highlights the importance of pre-incident evacuation planning (e.g., host-state agreements, evacuee tracking and reunification systems, identification of accessible transportation assets).

Scope

This annex applies to notice and no-notice incidents that pose a significant threat to the impacted population; applies to movement directed by local, state, territorial, and/or federal authorities; and includes all activities associated with general population, patient, and animal evacuations, such as:

✓ Evacuee triage, identification, tracking, regulating, reunification

✓ Host-state/host-jurisdiction identification

✓ Accessible public information including alerts, warnings, and notifications

✓ Embarkation from threatened/impacted area

✓ Short- and long-haul multi-modal transportation, including accessible transportation

✓ Debarkation in host-jurisdiction

✓ Interface between evacuation, sheltering, and reunification operations

✓ Re-entry/re-occupancy

✓ Command, control, and coordination

✓ Emergency repatriation
This annex addresses evacuation and re-entry operations but does not address the provision of mass care services for sheltering and temporary housing.\(^2\)

This annex addresses international evacuations of U.S. citizens to the United States and repatriation support of international visitors during a domestic incident.\(^3\)

**Situation**

Evacuation can happen anywhere in the United States and territories, can arise under the threat of all hazard types, and typically occur with minimal to no federal support. The decision-making process and the conduct and management of evacuation and re-entry operations are state and local\(^4\) government responsibilities.

The focus of federal evacuation support is on incidents of lower frequency and higher impact. Typically, the level of federal support correlates to incident magnitude, with more complex, dynamic, and resource-intensive incidents receiving higher levels of support.

Evacuations can affect multiple geographic regions, can cross international borders, and may have long-term health, social, political, and economic impacts on affected jurisdictions. A whole community approach to facilitate both the evacuation from and safe return of evacuees to an affected community can minimize these impacts. The Federal Government, in conjunction with whole community partners, including Voluntary Organizations Active in Disaster (VOAD), and local non-governmental organizations, including those that serve persons with disabilities and others with access and functional needs, may serve in a cooperative role to support and enable the safe and efficient movement of individuals and animals from an impacted or potentially impacted community to areas of safe refuge as well as the return of evacuees back to the community.

The continuum of evacuation operations extends beyond simply transportation of the affected population. Evacuations begin with the spontaneous movement of evacuees or an official evacuation order. Evacuations require significant multi-jurisdictional coordination for many activities, such as the tracking

\(^2\) More detailed information about federal support for sheltering and temporary housing can be found in the FEMA Catastrophic Sheltering and Temporary Housing Concept of Operations and the Emergency Support Function #6 Annex to the National Response Framework.

\(^3\) Additional information on international evacuation and repatriation support is addressed within U.S. Department of State (DOS) evacuation planning documents, the HHS Surge Repatriation Plan, as well as the International Coordination Support Annex to the National Response Framework.

\(^4\) To maintain brevity, this annex uses the term “SLTT” in lieu of “state, local, tribal, territorial, and insular area” for the remainder of the annex, except in instances where the longer designation is necessary.
and transport of evacuees, traffic management to accelerate clearance times, logistical support including identifying accessible stopping points with accessible toilet facilities, mass care and sheltering, reunification support, transport to enable population re-entry and re-occupancy, as well as accessible public messaging involving repetitive alerts, warning, and notifications.

![Evacuation Continuum](image)

**Figure 1: Evacuation Continuum**

Historically, the vast majority of evacuations involve a single jurisdiction with less than 5,000 individuals evacuated; fewer than 10 percent of evacuations involve greater than 100,000 individuals. Recent incidents have necessitated federal evacuation and re-entry support, including: Hurricanes Katrina (2005), Rita (2005), and Gustav (2008), the Colorado Front Range Flood (2013), Hurricane Matthew (2016), and Hurricanes Harvey, Irma, and Maria (2017), and the CA Wildfires (2018).

While these incidents involve less than 100,000 individuals, the National Risk and Capability Assessment (NRCA) identify an Improvised Nuclear Device (IND) detonation in New York City (NYC) as the most stressful scenario with a target evacuation number of 4.7 million people (940,000 of that target with disabilities and others with access and functional needs) within 15 days to one year of the incident.

Although this annex touches on nuclear and radiological events, the complexities of this type of an event cannot be fully contained within this more generalized evacuation planning effort.

**Evacuation Terms of Reference**

Jurisdictions throughout the United States utilize varying terms to describe evacuations (e.g., survivor movement, mass migration, and mass evacuation). FEMA’s “Comprehensive Preparedness Guide 101 (CPG 101) (2014)” defines evacuation as the organized, phased, and supervised withdrawal, dispersal, or removal of civilians from dangerous or potentially dangerous areas and their reception and care in safe areas. Evacuations occur in three ways:

- A **spontaneous evacuation**, also known as a shadow evacuation, occurs when individuals in threatened areas observe an incident or receive unofficial notice of an actual or perceived threat

---

6 An IND detonation in NYC (Region II IND Response Plan, 2015) is identified as the most stressful scenario involving large target numbers of individuals to be evacuated [National Capability Targets, National Risk and Capability Assessments, February 3, 2020].
and, without receiving instructions to do so, elect to evacuate the area. Their movement, means, and direction of travel are unorganized and unsupervised.

- **A voluntary evacuation** is a warning to individuals within a designated area that a threat to life and property exists or is likely to exist in the immediate future. Individuals issued this type of warning are not required to evacuate but are notified that it is in their best interest to do so.

- **A mandatory or directed evacuation** is a warning to individuals within the designated area that an imminent threat to life and property exists and individuals must evacuate in accordance with the instructions of state and local officials.

For this annex, and consistent with CPG 101, evacuation is the *temporary* relocation of a population to a place of safe refuge to avoid a threat or hazard. Migration is the movement by people from one place to another with the intention of settling permanently in the new location. Accordingly, mass migration, often misused interchangeably with evacuation, is the *permanent* relocation of large portions of a population because of the impact of a threat or hazard. While an evacuation may result in the permanent relocation of the population, the intent of an evacuation is temporary. This annex addresses all federal support activities associated with an evacuation through the point of shelter and temporary housing of affected populations and subsequent re-entry and re-occupancy within the impact area.

**Timing of Evacuations**

The most commonly referenced scenario involving a large-scale evacuation is a hurricane. Hurricane-prone states and local jurisdictions have likely prepared to conduct evacuation operations. They have developed, trained to, and exercised evacuation plans and they actively coordinate across levels of government. This is not often the case for non-hurricane-prone jurisdictions, which includes most communities around the country whose primary risks are no-notice events (e.g., earthquakes, floods, etc.). They are often unpracticed in large-scale evacuations.

For no-notice incidents, there is often an increased level of support requested from the Federal Government, which requires heightened levels of interagency and intergovernmental coordination. These types of events pose a greater need for resource prioritization and adjudication of requests for limited resources, which is amplified by evacuation time constraints.

Evacuations can occur before, during, or after an incident. Incidents may prompt evacuations both pre- and post-incident.

**Pre-Incident Evacuations** occur when warning (notice) is available before an incident to move the threatened population away from a potential area of impact. Incidents that may provide sufficient warning include hurricanes, flooding, and nuclear power plant incidents. Timelines may vary greatly, however, among these incident types. One key advantage to a pre-incident evacuation is that transportation resources and infrastructure are operating under steady-state conditions. Pre-incident evacuation decision making requires officials to balance potentially costly, hazardous, or unnecessary evacuations against the possible loss of life or harm to a population.

**Post-Incident Evacuations** occur during or after an incident when it is unsafe for the affected population to remain in the incident area. In contrast to pre-incident evacuations, post-incident evacuations may occur simultaneously with response operations. Resource constraints will arise as resources otherwise
employed to support evacuation operations fulfill other emergency response tasks instead. Power outages, system disruptions, and damage to critical infrastructure and resources—reducing capability while inspections and repairs are conducted—may affect evacuation operations. Incident-specific factors, including resource availability and incident-specific hazards, may affect evacuation strategies and the feasibility and prioritization of post-incident evacuations.

**Evacuee Population Types**

This Federal Evacuation Support Annex (FESA) addresses the specific considerations of three evacuee populations: general population, patients, and animals (Figure 2). An evacuee is an individual who is departing or has departed from a designated area where a risk to life and property exists due to the threat or occurrence of a natural or manmade incident. General population evacuees and patient evacuees include individuals of all ages, races, genders, cultures, economic statuses, and religions and may be individuals with disabilities with their service animals, others with access or functional needs, individuals who under normal conditions require home- or community-based services to obtain medical care or have their health care needs met, individuals with limited-English proficiency, institutionalized persons, and persons with restricted freedoms.9

![Figure 2: Evacuee Population Types](image)

**General Population Evacuee:** The majority of the population expected to evacuate are considered general population evacuees. General population evacuees may possess the means to evacuate (self-

---

7 Such institutions include public nursing homes, mental health facilities, and institutions for individuals with intellectual disabilities, as defined by the Civil Rights of Institutionalized Persons Act (CRIPA) of 1980: 42 U.S.C. § 1997 et seq.
8 This annex considers adult or juvenile jails, prisons, and correctional facilities separate from the institutions described above. These populations are addressed within the general population evacuee type due to their transportation dependence; however, separate procedures and interagency agreements exist for the evacuation and re-entry of the inmate populations in these institutions.
9 Persons with restricted freedoms include inmate populations from adult or juvenile jails, prisons, and correctional facilities. Separate procedures and interagency agreements exist for the evacuation and re-entry of these populations and include security measures to maintain custody of detainees.
evacuee) or may require assistance (critical transportation needs [CTN] evacuee). General population evacuation is addressed in Appendix 3.

**Self-Evacuee:** Individuals who possess the capability or obtain the resources to evacuate from a potentially dangerous area prior to, during, or after an incident.

**Critical Transportation Needs (CTN) Evacuee:** General population individuals that require assistance to leave a potentially dangerous or disaster-affected area (also referred to as Transportation-Dependent Population or Transportation-Disadvantaged Population). These populations may include evacuees with disabilities or evacuees without access to transportation due to their economic status.

**Patient Evacuee:** Includes people under the care of the Emergency Medical Services (EMS) system (e.g., prehospital emergency care, community para-medicine/mobile integrated healthcare), inpatient healthcare facilities (e.g., hospital, skilled nursing facility/nursing home, psychiatric facility) and outpatient and community-based healthcare services (e.g., home healthcare, dialysis, ambulatory surgery support) prior to, during, or after a disaster. Appendix 4 addresses Patient Movement evacuation.

**Animal Evacuee:** Animals include household pets, assistance animals, working dogs, agricultural animals/livestock, wildlife, exotic animals, zoo animals, research animals, and animals housed in shelters, rescue organizations, breeding facilities, and sanctuaries. Service animals evacuate with their owners as part of either the general or patient populations. Additionally, people and their pets are inextricably linked. Often, people with pets will not evacuate if provisions are not made for their pets. When feasible, people and pets should be evacuated together to simplify evacuation operations and mitigate the need for reunification services." Appendix 5 provides detail on animal evacuation.

**Evacuation and Shelter-in-Place Guidance**

State, territorial, tribal and local officials have the authority and responsibility for and may issue guidance to the public on protective actions (e.g., evacuation, sheltering in place) that individuals within a dangerous or potentially dangerous area should take to minimize the effects of a threat/hazard. The role of federal agencies\(^\text{10}\) is to provide timely guidance to inform state and local decision making. State, territorial, tribal, and local officials may choose to implement protective actions depending on incident-specific factors, such as time, resource availability, and incident severity. Evacuation and shelter-in-place strategies are not mutually exclusive and may be combined to maximize population protection. For example, in some scenarios, sheltering in place in an appropriate radius around a threat area, combined with evacuation of downwind populations, might result in the best protection potential for the greatest number of people.

**Evacuation Orders**

State, territorial, tribal and local governments are responsible for issuing accessible evacuation orders, but emergency powers differ from jurisdiction to jurisdiction. In some states, both state and local officials may have the authority to issue mandatory evacuation orders (e.g., Georgia), but in other states, only the

\(^\text{10}\) For this annex, “federal agency” includes any Federal Executive Branch department or agency—boards, commissions, government corporations, and any independent agencies of the U.S. Government—that have authority for, or provide support to, the response to and recovery from an incident involving evacuation.
Governor may retain the authority to issue mandatory evacuation orders (e.g., Alabama). The specific individuals authorized to issue evacuation orders (e.g., fire chief, police chief, senior elected official) also vary between states. Additional information on state and local evacuation authorities is contained in Appendix 10.

Individuals within an impacted or potentially impacted jurisdiction are most likely to heed evacuation orders when issued by a trusted authority for disseminating alerts, warnings and notifications, when their family, friends, and/or community members have chosen to evacuate, or when jurisdictional plans provide for the evacuation of pets/animals.

In addition to differing authorities, state, territory and local governments also utilize different terminology related to evacuation orders. Terms such as mandatory, voluntary, recommended, forced, phased, and zoned are commonly used. Regardless of the term, individuals located within an impacted or potentially impacted jurisdiction or community are most likely to heed evacuation orders when issued by a trusted authority (e.g., governor, police chief), when their family, friends, and/or community members have chosen to evacuate, or when jurisdictional plans provide for the evacuation of pets/animals. Communications regarding evacuation orders should be clear and contain information to assist people with complying with the order (e.g., Messaging should provide instructions for pet owners regarding how to safely evacuate with their pets. In the absence of or in lieu of a formal evacuation order, individuals may directly respond to conditions on the ground or risk information from sources such as social media or weather forecasts.

**Shelter-in-Place Guidance**

“Shelter-in-place” is defined as the use of a structure to temporarily separate individuals from a hazard or threat. Sheltering in place is considered the primary protective action in many cases. Often it is safer for individuals to shelter-in-place than to try to evacuate. Sheltering in place is appropriate when conditions necessitate that individuals seek protection in their homes, places of employment, or other locations when disaster strikes from certain threats and hazards.

State, territory and local officials may encourage individuals to shelter-in-place rather than evacuate in consideration of the following:

An evacuation may put individuals in greater danger than sheltering in place (e.g., in the event of environmental contamination or for individuals with chronic health conditions, infants, and older adult populations, who may be more susceptible to the physical and psychological stresses of evacuations) and, as a result, some may experience an exacerbation of their conditions.

To reduce the impact on transportation routes, transportation resources can bring lifesaving/life-sustaining supplies and personnel into the area first and then support the evacuation of the population within the affected jurisdiction.

A segment of the population may be resistant to follow evacuation orders due to cultural, historical, financial, or political sensitivities (e.g., dependency on agricultural lands for financial stability, distrust of...
government, significance of tribal lands); disabilities, limited English proficiency, economic status, and other access and functional needs (e.g., lack of accessible transportation); immigration or legal status; desire to protect personal property; and concern for their animals.

Evacuations can have both short- and long-term social and economic implications for the affected jurisdiction (e.g., loss of tax base, loss of workforce, disruption to family or community structure).

Circumstances where the best action is to shelter-in-place include protection from wind events, protection from environmental contaminants, including ashfall and chemical or radiological contaminants; protection from dangerous persons or events; isolation from contagious diseases; and protection from flooding for sheltering locations that are at high ground. Because of the unique nature of radiation dangers associated with a nuclear detonation, sheltering in place saves the most lives in the first 24 hours.11

When circumstances change for persons who shelter-in-place (winds shift, storms intensify, flood waters increase) lives are put at risk, especially for people who are dependent on accessible transportation that no longer is available. The absence of community (Meals on Wheels), health (dialysis), and social services (e.g., utilities, emergency services) and/or the presence of ongoing threats and hazards (e.g., hazardous materials, degraded infrastructure, debris) may negatively impact survivors who decide or are forced to shelter-in-place.

Re-entry Operations

Both impacted jurisdictions and host-jurisdictions may desire to return evacuees to their pre-disaster residences as soon as possible to facilitate community-restoration activities and alleviate host jurisdictions of their evacuee support responsibilities. Although re-entry operations are a state and local responsibility, states can request federal support to augment state and local capabilities (e.g., procurement of accessible transportation assets). Appendix 6 provides further detail on re-entry operations.

Phased re-entry refers to the process of granting access to an incident site and other restricted areas by aligning response and recovery personnel and other affected stakeholders (e.g., local business owners, utility operators) and managing re-entry via defined access levels. Access level definitions may be based on incident management priorities, response and recovery needs, incident site conditions, and safety concerns. Depending on the size and scope of the incident, public works assessments of critical facilities, roads, checkpoints, roadblocks, and transit routes may be required to ensure a safe and orderly return to an affected area by community members.

Relocation Operations

The absence of community, health, and social services (e.g., utilities, emergency services) and/or the presence of ongoing threats and hazards (e.g., hazardous materials, degraded infrastructure, debris) may interfere with survivors returning to their pre-disaster residences. As a result, some evacuees may relocate, temporarily or permanently, to alternate jurisdictions.

Facts, Assumptions, and Critical Considerations

The following information represents facts, planning assumptions, and critical considerations that contribute to the development of an operational environment for the FESA and are supplemental to those outlined in the Response and Recovery FIOPs.

Table 1: FESA Facts

<table>
<thead>
<tr>
<th>Facts</th>
</tr>
</thead>
<tbody>
<tr>
<td>The conduct of evacuation operations is a state, territory, tribal, and local responsibility.</td>
</tr>
<tr>
<td>Federal evacuation support is provided by the following process: A governor requests federal assistance, or when, in the absence of a specific request, the President may provide accelerated federal assistance where necessary to save lives, prevent human suffering, or mitigate severe damage—when, to the fullest extent practicable, the President promptly notifies and coordinates with a state in which such assistance or support is provided. (Robert T. Stafford Disaster Relief and Emergency Assistance Act)</td>
</tr>
<tr>
<td>FEMA is responsible for conducting emergency operations to save lives and property through positioning emergency equipment, personnel, and supplies, through evacuating potential victims, through providing food, water, shelter, and medical care to those in need, and through restoring critical public services. (6 U.S.C. § 314 9(C))</td>
</tr>
<tr>
<td>Disaster relief and assistance activities by FEMA and recipient of FEMA financial assistance shall be accomplished in an equitable and impartial manner, without discrimination on the grounds of race, color, religion, nationality, sex, age, disability, English proficiency, or economic status. Section 308 of the Stafford Act, 42 U.S.C. § 5151.</td>
</tr>
<tr>
<td>State and local governments must address the needs of individuals with household pets, assistance animals, and service animals following a major disaster or emergency. (Pets Evacuation and Transportation Standards Act of 2006)</td>
</tr>
<tr>
<td>Individuals cannot be separated from their service animals or durable medical equipment (DME) throughout the entire evacuation and re-entry process. (Americans with Disabilities Act of 1990)</td>
</tr>
<tr>
<td>Individuals supporting critical infrastructure and essential service operations may be exempt from mandatory evacuation orders and will be subject to industry-established and life-safety protocols.</td>
</tr>
<tr>
<td>Timely and actionable public messaging, emergency notifications, and information about the preservation of life and safety, in formats accessible to people with disabilities and in relevant languages for people with limited English proficiency is essential to evacuation support. FEMA’s Integrated Public Alert and Warning System (IPAWS) supports emergency messages in accessible formats sent to people via radio, television, and cell phones.</td>
</tr>
</tbody>
</table>

12Durable medical equipment: Equipment prescribed by a physician that is medically necessary for the treatment of an illness or injury, or to prevent a patient’s further deterioration. This equipment is designed for repeated use and includes items such as oxygen equipment, wheelchairs, walkers, hospital beds, crutches, and other medical equipment. (Source: FEMA Disaster Assistance Policy - DAP 9525.4)
Accommodations will be needed to ensure transportation assets are accessible, including but not limited to the following:

- Consideration of space to accommodate DME and other medical supplies
- Platform barriers to prevent wheelchairs from rolling off
- Strong and large handrails
- Vehicle ramps or bridge plates
- Lift equipment to load wheelchairs
- Priority seating for individuals with disabilities
- Proper and clear doorways and pathways in subways
- Proper lighting on ramps and doorways

Some people who use durable medical equipment, mobility assistive devices, electricity-dependent implantable medical devices, and others with access and functional needs will have difficulty or require assistance to evacuate safely.

Some individuals will be living in institutionalized settings (e.g., group/nursing homes).

The evacuee population will include individuals subject to judicial and/or administrative orders restricting their freedom of movement (e.g., individuals on probation). Some of these individuals (e.g., sex offenders) may require additional coordination with state and/or law enforcement (e.g., separate accommodations at shelters).

Many children and older adults will be in the temporary care of educational, childcare, medical, juvenile justice, recreational, or other applicable facilities and may be unaccompanied if caretakers are injured or deceased or if children or adults requiring care are unable to be reunited with their parents/legal guardians.

Reunification services and protocols will be required to help reunite children, adults, and animals, and to help displaced survivors establish contact with family, friends, legal guardians, and colleagues after a period of separation.

Some incidents (e.g., nuclear or radiological incidents) will require the affected population to shelter-in-place followed by an immediate coordinated evacuation once decontamination and movement is feasible.

Individuals will attempt to evacuate while in possession of firearms and other weapons or contraband. State and local law enforcement may need a system/mechanism (e.g., tracking system, amnesty depository) to manage surrendered and sequestered weapons.  

Behavioral health consequences of the evacuation and the threat or hazard that instigated it will serve as a persistent impediment to the safety, health, and well-being of the impacted population and responders.

Evacuation operations will be hampered by disruptions to the area’s critical infrastructure and transportation resource shortfalls.

Support will be requested to transport and shelter animals that accompany evacuees, including service animals that must always remain with their owners.

There may be animals that require evacuation that are not associated with a specific individual, such as animals in laboratories, shelters, zoos, circuses, retail stores, veterinary hospitals, animal daycare centers, sanctuaries, kennels breeding operations, obedience schools, trainers, groomers, and animal rehabilitation facilities.

---

**Facts**

<table>
<thead>
<tr>
<th>Facts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Some evacuees and patients will require lifesaving and life-sustaining support, equipment, or other assistance to maintain independence (e.g., service animals, assistance animals, durable medical equipment, power-dependent implantable devices, consumable medical supplies (e.g., oxygen), prescription medications, and attendants).</td>
</tr>
<tr>
<td>Mass feeding provided to evacuees, will need to accommodate those with cultural, ethnic, religious, and specific dietary needs. Age appropriate food may also be necessary to sustain infants/toddlers and older adults.</td>
</tr>
<tr>
<td>Feeding operations will require considerable public health assets to ensure that safe food preparation and distribution methods are practiced preventing illness or outbreaks of foodborne illnesses. In addition, mass feeding should consider providing safe water to prevent waterborne illness.</td>
</tr>
<tr>
<td>Animals will require feeding, hydration, husbandry, and monitoring during evacuation.</td>
</tr>
<tr>
<td>Some evacuees will be unable to present personal health, human service, and behavioral health care plans, prescriptions, and other needs throughout the evacuation and will need to be assessed. Self-evacuees and transportation-assisted evacuees may require medical attention during evacuation/re-entry.</td>
</tr>
<tr>
<td>Health systems must plan for crisis standards of care and scarce resource utilization during mass evacuations. Arrangement for patient receipt with health care systems will be completed before patients are evacuated (e.g., pediatric capacity). Both discharge and receipt facilities will track the evacuation and receipt of those patients.</td>
</tr>
<tr>
<td>State, territorial, and local officials have the responsibility for evacuee screening and decontamination operations in response to a hazardous material incident. Some evacuees, their belongings (including durable medical equipment, assistive devices, wheelchairs, hearing aids, etc.), and animals (including household pets, service and assistance animals) may require chemical or radiological decontamination by State, territory or local jurisdictions.</td>
</tr>
<tr>
<td>The selection of host-communities is based on the ability of a community to support shelter operations, associated wraparound services, and universal access (e.g., facilities, infrastructure, and lead-time to provide resources to the location). Impact-communities, in coordination with host-communities, will need to coordinate the embarkation, transportation, and debarkation of evacuees.</td>
</tr>
<tr>
<td>A large-scale hazardous materials incident will affect evacuation efforts. Evacuation authorities should consult with hazardous materials experts regarding the location of evacuation routes and embarkation/debarkation sites.</td>
</tr>
<tr>
<td>Transportation Mode: Evacuation, sheltering, and re-entry operations are influenced by the size and demographics of the population, the availability/operability of accessible transportation assets/infrastructure, and the proximity of suitable sheltering options.</td>
</tr>
<tr>
<td>Governmental and non-governmental mass care/emergency assistance service providers require information about the movement of evacuees (e.g., expected arrival time, number of evacuees, number of individuals with disabilities, type of disability, and others with access and functional needs), the number of unaccompanied children, the number and species of animals to prepare for and provide essential mass care/emergency assistance services.</td>
</tr>
</tbody>
</table>

---

14 Definition of wrap-around services provided by MC/EA and listed in Glossary.
Some people will rely upon life-maintaining out-patient healthcare services (e.g. dialysis, infusion therapies, etc.) that must be continued and may require additional coordination to ensure they are evacuated to an area that can accommodate and ensure continuity of these critical health requirements. Additional time may also be required to ensure these at-risk dialysis patients can receive an early dialysis treatment, as a critical protective health measure, and will rely upon their local medical support accessible transportation services to obtain it in advance of an anticipated catastrophic event.

Table 2: FESA Planning Assumptions

<table>
<thead>
<tr>
<th>Planning Assumptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coordination among entities supporting the transportation and sheltering components of the evacuation must occur to ensure proper resources and/services are available to the evacuee, including individuals with disabilities (and their service animals), others with access and/or functional needs, and those with animals.</td>
</tr>
<tr>
<td>Populations involved with law enforcement (e.g., prisoners, illegal immigrants) may require additional security and oversight support for both transportation and sheltering. Planning for the evacuation of detainee populations may require coordination with state, local, tribal, territorial, and private sector.</td>
</tr>
<tr>
<td>In no-notice events, some populations will need to evacuate on foot either because there is no safe route for vehicles or because they have no planned transportation. In these instances, secondary evacuation staging areas should be considered if the distances to safety exceed walking distance (example - people who climb to high ground on foot or walk out of flash flood areas).</td>
</tr>
<tr>
<td>Designated evacuation sites and routes will be pre-assessed for safety, accessibility, and health protection of evacuees.</td>
</tr>
<tr>
<td>Mass care/emergency assistance (e.g., accessible sheltering, toilet and showers, sanitation, feeding, hydration, reunification, distribution of emergency supplies) and personal care services will be needed at all evacuation sites, in transit, and in the impact area during the evacuation.</td>
</tr>
<tr>
<td>Some critical federal evacuation resources will be located within the impact area (e.g., military installations), and may be unavailable due to the requirement to evacuate themselves, particularly in no-notice evacuations.</td>
</tr>
<tr>
<td>An influx of contra-flow responders competing for scarce resources, such as rental vehicles and viable lodging options and support, may require additional coordination with federal, state, local, and private sector.</td>
</tr>
<tr>
<td>Limited evacuation assets in an area may be reserved for incoming Federal response teams and be unavailable for evacuation use (e.g., ramp space at an airport).</td>
</tr>
<tr>
<td>A re-entry planning process may need to be established through a coordinated effort between impact- and host-community authorities to facilitate the post-incident return of evacuated individuals and their animals as well as patients. Some evacuees may be unable to return to their homes for extended periods, if at all.</td>
</tr>
</tbody>
</table>
| Host-State/Jurisdiction Agreements: Host-state/jurisdiction (or mutual aid) agreements, or Emergency Management Assistance Compacts (EMAC), are necessary to ensure the coordinated evacuation of individuals from the impacted state/jurisdiction to a host-state/jurisdiction. The Governor(s)/tribal leader(s) of state(s)/tribe(s) receiving evacuees may not have agreements in place, prior to an evacuation, to accept disaster survivors [Public Assistance Program and Policy Guide (PAPPG), Version 4, June 2020]}
Critical Considerations for Crisis Action Planning

The following general critical considerations are supplemental to those outlined in the Response and Recovery FIOPs. The table below outlines some, but not all critical considerations:

<table>
<thead>
<tr>
<th>Critical Considerations for Crisis Action Planning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Evacuation Triggers and Timelines</strong></td>
</tr>
<tr>
<td><strong>Risk</strong></td>
</tr>
<tr>
<td>Depending on the threat or hazard, evacuation triggers and timelines will be different for pre-incident versus post-incident events.</td>
</tr>
<tr>
<td><strong>Management</strong></td>
</tr>
<tr>
<td>• Pinpoint evacuation clearance times for pre-incident threats to a population.</td>
</tr>
<tr>
<td>• Identify evacuation zones and resources, such as accessible transportation for transporting the most vulnerable populations in pre-incident evacuations.</td>
</tr>
<tr>
<td>• Consider shelter-in-place options in addition to evacuation operations.</td>
</tr>
<tr>
<td><strong>Evacuee Decontamination</strong></td>
</tr>
<tr>
<td><strong>Risk</strong></td>
</tr>
<tr>
<td>Without appropriate decontamination and proof of decontamination, neighboring states/jurisdictions may resist accepting evacuees (and their animals) that are or may have been contaminated.</td>
</tr>
<tr>
<td><strong>Management</strong></td>
</tr>
<tr>
<td>• Plan to transport highly contagious evacuees through specialized transportation systems to minimize exposure to others.</td>
</tr>
<tr>
<td>• Provide appropriate public information notices to media to release to evacuation areas and host-jurisdiction officials.</td>
</tr>
<tr>
<td>• Ensure information notices are available in accessible formats, including sign language and multiple languages.</td>
</tr>
<tr>
<td><strong>Geography and Environmental Challenges</strong></td>
</tr>
<tr>
<td><strong>Risk</strong></td>
</tr>
<tr>
<td>Evacuations may affect jurisdictions situated in a broad range of geographies and environments (e.g., deserts, wilderness areas, urban areas), requiring specialized resources, support services, and strategies to effectively facilitate safe and efficient evacuation operations.</td>
</tr>
<tr>
<td><strong>Management</strong></td>
</tr>
<tr>
<td>• Identify regional plans that specifically address geographical challenges.</td>
</tr>
<tr>
<td><strong>Population Assessment</strong></td>
</tr>
<tr>
<td><strong>Risk</strong></td>
</tr>
<tr>
<td>Pre-incident population information may be incomplete thus jeopardizing evacuation operations, including the safety of evacuees.</td>
</tr>
<tr>
<td><strong>Management</strong></td>
</tr>
<tr>
<td>• Conduct an immediate assessment of the evacuee population to identify specific individual or family group needs (e.g., health/medical, mental, functional, social services, socio-economic, including lack of access to transportation due to economic status, nutritional, cultural, and language).</td>
</tr>
<tr>
<td>Management</td>
</tr>
<tr>
<td>---</td>
</tr>
</tbody>
</table>

**Evacuee Sustainability**

<table>
<thead>
<tr>
<th>Risk</th>
<th>Adequate feeding, hydration, and sanitation/hygiene services will be required along evacuation routes for people and animals. Special consideration to be given to evacuees with disabilities and those with access and functional needs. Access to critical health and human services will be needed to protect the health and well-being of the evacuees.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Management</th>
<th>Ensure that accessible resources, or accommodations and modifications for accessibility, are implemented to ensure evacuation and re-entry operations can support all populations.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Management</th>
<th>Identify critical resources and services needed for a mass evacuation scenario</th>
</tr>
</thead>
<tbody>
<tr>
<td>Management</td>
<td>Work with the appropriate personnel to place Defense Production Act (DPA) language in the standby contracts used to procure anticipated critical needs.</td>
</tr>
<tr>
<td>Management</td>
<td>Provide age-appropriate commodities (e.g., hydration, diapers, baby formula) to support infants, younger children, and older adults during the evacuation process and re-entry.</td>
</tr>
<tr>
<td>Management</td>
<td>Ensure that designated rest stop(s) along an evacuation route are staffed by mass care, medical and mental health providers, and security at a minimum to evaluate the population as they are evacuating and remove any who may not be able to travel or become unstable in some way.</td>
</tr>
<tr>
<td>Management</td>
<td>Consider requirements to support populations sheltering in place while in the temporary care of educational, childcare, medical, juvenile justice, recreational, or other facilities.</td>
</tr>
<tr>
<td>Management</td>
<td>Prioritize portable, sustainable generators and/or restoration of electrical service for individuals who have power-dependent durable medical equipment and power-dependent implantable devices, as lack of access to power can become life threatening.</td>
</tr>
<tr>
<td>Management</td>
<td>Ensure that accommodations are made for personal assistance provider or people who escort patients and assist in their activities of daily living.</td>
</tr>
</tbody>
</table>

**Animals**

<table>
<thead>
<tr>
<th>Risk</th>
<th>During evacuation and re-entry operations, household pets, service and assistance animals will require tracking, embarkation, transportation, debarkation, care, feeding, husbandry/waste removal, veterinary support, and sheltering support.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Management</th>
<th>Conduct an immediate assessment of the household pets, service and assistance animal population requiring evacuation by trained personnel to determine transportation, mass care, and additional support requirements and to provide recommendations on appropriate courses of action.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Management</td>
<td>Access the American Veterinary Medical Association's information regarding pet ownerships and the Pet Ownership Calculator to determine the target household pet population that would need to be evacuated and include them in the assessment. <a href="https://www.avma.org/resources-tools/reports-statistics/us-pet-ownership-statistics">https://www.avma.org/resources-tools/reports-statistics/us-pet-ownership-statistics</a></td>
</tr>
<tr>
<td>Management</td>
<td>Identify requests for federally augmented tracking equipment.</td>
</tr>
<tr>
<td>Management</td>
<td>Provide for the timely reunification of owners and their animals (household pets, service and assistance animals).</td>
</tr>
</tbody>
</table>

**Critical Infrastructure**

<table>
<thead>
<tr>
<th>Risk</th>
<th>A mass evacuation could present a range of implications for many of the critical infrastructure sectors within the affected jurisdiction(s) and nationally. The evacuation could directly affect critical infrastructure operations, supply lines, and/or distribution systems.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Management</td>
<td>• Establish lines of communication among federal, state and critical infrastructure operations to report on the number of expected evacuees and routes, transportation, and shelter options.</td>
</tr>
<tr>
<td>Management</td>
<td>• Request information on damage to critical infrastructure that could affect evacuation planning.</td>
</tr>
<tr>
<td>Management</td>
<td>• Begin DPA process for establishing voluntary agreements between key business sectors to expedite/expand supply of critical materials or services (voluntary agreements between members of airline, railroad, shipping, or trucking industries) to plan and collaborate evacuation activities.</td>
</tr>
<tr>
<td>Management</td>
<td>• Provide weather updates for weather conditions that could have a negative impact on evacuation operations.</td>
</tr>
<tr>
<td><strong>Public Information</strong></td>
<td></td>
</tr>
<tr>
<td>Risk</td>
<td>Stress and chaos often follow a mandated evacuation, which may have a negative impact on the safety of an affected population.</td>
</tr>
<tr>
<td>Management</td>
<td>• Ensure that public information provides instructional messaging for evacuees. Suggested messaging includes instructions of where to go for resources for evacuation/re-entry, what to bring, and sheltering-in-place instructions.</td>
</tr>
<tr>
<td>Management</td>
<td>• General welfare messaging includes safety advisories, resource information, information related to finding a family member that has evacuated, is required to facilitate safe and organized evacuations and re-entry operations.</td>
</tr>
<tr>
<td>Management</td>
<td>• Messaging should provide information regarding resources and locations that can address specific access and functional needs (e.g. oxygen, dialysis, etc.).</td>
</tr>
<tr>
<td>Management</td>
<td>• Ensure messaging is accessible and is culturally and linguistically appropriate for the general population and at-risk populations with disabilities and access and functional needs.</td>
</tr>
<tr>
<td>Management</td>
<td>• Distribute accessible formats, including pictograms, captioned videos with certified deaf interpreter, through a variety of media outlets to reach the evacuee population.</td>
</tr>
<tr>
<td>Management</td>
<td>• Ensure ready access to qualified interpreters for people who are deaf or hard of hearing and in prevalent language for people who have limited English proficiency (LEP), distribute information in accessible and multiple formats (including pictograms, audio, large print, and captioning), provide messaging that is in plain languages, short, and culturally appropriate through a variety of media outlets to reach all of the evacuee population.</td>
</tr>
<tr>
<td>Management</td>
<td>• Employ FEMA’s widely-available Integrated Public Alert and Warning System (IPAWS) as it enables public safety and emergency management authorities to deliver public ordering or messaging simultaneously via wireless emergency alerts (WEA), Emergency Alert System (EAS), and the internet.</td>
</tr>
<tr>
<td><strong>Tracking and Reunification Services</strong></td>
<td></td>
</tr>
<tr>
<td>Risk</td>
<td>Responding to high volumes of requests for information from concerned family, friends, and legal guardians to locate individuals within the impact area can burden emergency response operations.</td>
</tr>
<tr>
<td>Management</td>
<td>• Identify requests for federal support to provide evacuation tracking methodology as well as staff to support evacuation (e.g., National Mass Evacuation Tracking System (NMETS)).</td>
</tr>
<tr>
<td>Management</td>
<td>• Implement reunification services early and throughout the evacuation process.</td>
</tr>
<tr>
<td>Management</td>
<td>• Safeguard reunification process to verify the identity of located parents or legal guardians before releasing unaccompanied minors.</td>
</tr>
</tbody>

Federal Evacuation Support Annex to the Response and Recovery Federal Interagency Operational Plans
Base Plan

<table>
<thead>
<tr>
<th>Undocumented Evacuees</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Risk</strong></td>
</tr>
<tr>
<td>Undocumented non-citizens will be reluctant to evacuate out of fear of apprehension, detention, and repatriation. Some evacuees may be unable to present personal identification when requested/required during evacuation/re-entry operations.</td>
</tr>
<tr>
<td><strong>Management</strong></td>
</tr>
<tr>
<td>• Confirm that law enforcement agencies have issued non-discrimination policy statements during response operations to focus missions on lifesaving and life-sustaining activities and maintaining public order.</td>
</tr>
<tr>
<td>• Ensure that accessible and culturally and linguistically appropriate public information notices are issued to ensure the safety of threatened populations.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Limited Resources</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Risk</strong></td>
</tr>
<tr>
<td>State governments may compete over limited evacuation resources (e.g., bus, ambulance, pediatric equipment, and other accessible transport contracts) due to pre-established contracts with single vendors that cross jurisdictional boundaries.</td>
</tr>
<tr>
<td><strong>Management</strong></td>
</tr>
<tr>
<td>• Stand up evacuation support cell/Critical Action Planning (CAP) to monitor resource requests/shortages.</td>
</tr>
<tr>
<td><strong>Management</strong></td>
</tr>
<tr>
<td>• Implement Defense Production Act (DPA) Priorities Authority in procurement contracts for resources and services.</td>
</tr>
</tbody>
</table>

**Mission**

The mission addressed by this annex is the facilitation, synchronization, and integration of federal agency and whole community resources and capabilities with state and local evacuation operations, when necessary, in order to save lives, reduce human suffering, protect property and the environment, and meet basic human needs before, during, and after an evacuation. This is accomplished by:

- Enhancing capabilities to provide timely, accurate situational awareness, accessible risk communication, and preparedness information to the public and responders;
- Identifying resources to be alerted, deployed, and employed to save lives, limit human suffering, and protect property and the environment;
- Utilizing coordination mechanisms to set the best conditions possible for supporting state and local evacuation efforts;
- Appropriately removing barriers that limit response/recovery activities; and
- Prioritizing safe, effective evacuation, sheltering/temporary housing, and re-entry to an impacted jurisdiction.

**End State**

Achieving the desired end state of federal response and recovery operations for an evacuation occurs when individuals are returned to their pre-disaster locations (e.g., residences, healthcare facilities, etc.) or have otherwise relocated after being evacuated out of the impacted area (actual or anticipated), the informed public has maintained its confidence in federal and state governments, and public health, healthcare, and social services networks are restored and support the resilience, health, and well-being of affected individuals and communities.
Evacuation-specific Authorities

Authorities specifically applicable to this annex are included in Appendix 8 and are consistent with those outlined within the Response and Recovery FIOPs. Nothing in this annex alters or impedes the ability of federal agencies to carry out their respective authorities and associated responsibilities under law. This annex does not create new authorities nor change existing ones.

To avoid operational delays, federal agencies may take appropriate independent emergency actions within the limits of their statutory authorities to protect the public, mitigate immediate hazards, and gather information concerning the emergency. Federal agencies may take appropriate actions within the limits of their statutory authorities to evacuate illegal immigrants under DHS or HHS custody.

Execution

Concept of Operations

The conduct of evacuation and re-entry operations is primarily a state and local responsibility. However, there are circumstances where requirements may exceed the capabilities of such jurisdictions to support mass evacuations and/or re-entry operations. When practical and possible, precautionary evacuation support may be necessary before an event to move individuals away from a potential incident when warning is available and after an event when conditions are such that it is unsafe for individuals to remain in the area.

The decision-making process and conduct and management of evacuation and re-entry operations are inherently state and local government responsibilities.

In instances where federal support is requested, FEMA will coordinate with state/tribal governments to determine the assistance needed for self-evacuees evacuating in their personal vehicles and critical transportation needs evacuees evacuating via ground, air, rail, and/or maritime transportation systems. HHS will coordinate federal support for the evacuation of patients. FEMA and the USDA will coordinate federal support for the evacuation of household pets and service and assistance animals. Federal support will be provided to state and local evacuation operations and scaled to the incident. Evacuation from a single state may be supported from the state emergency operations center, FEMA Regional Response Coordination Center (RRCC), or a Joint Field Office (JFO). A catastrophic incident resulting in multi-state evacuations may be coordinated from the National Response Coordination Center (NRCC).

If the evacuation is to another state, the impact-state will coordinate with the host-state to facilitate the arrival and debarkation of evacuees. The host-state agrees to provide shelter, food, and medical care; support evacuees with animals, including household pets and service and assistance animals (a state's definition of service animal may be broader than the federal definition and may vary from state to state); provide financial assistance where applicable; and return evacuees to their home areas.

States will work together to reunify families and ensure public safety. In all instances, the Governor and his/her emergency management staff are responsible for the coordination of evacuation operations within their state and to host-state(s). FEMA may provide assistance if there are multiple host-states involved.
The impact-state will reimburse a host-state for eligible expenses incurred through the provision of evacuation support. See Figure 3 for a depiction of the Evacuation Concept of Operations.

**Concept of Support**

Evacuation and re-entry operations require a coordinated effort involving federal and SLTT governments, non-governmental organizations, including organizations serving with disabilities and private sector partners. The concept of support outlined in the Response and Recovery FIOPs is unchanged by this annex. The types of Federal evacuation support are listed below in Table 4.
Table 4: Types of Evacuation Support

<table>
<thead>
<tr>
<th>Types of Federal Evacuation Support</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Response</strong>-related public messaging for lifesaving, life-safety, and key public health messages to reach impacted populations and diverse audiences, including individuals with disabilities and limited English proficiency [ESF2].</td>
</tr>
<tr>
<td>National Warning System to provide a 24-hour continuous private line telephone system to convey warnings to Federal and SLTT government and public safety officials [NAWAS/FEMA].</td>
</tr>
<tr>
<td>Ensure adequate information on evacuation operations is relayed to the public in an appropriate and timely manner [ESF15].</td>
</tr>
<tr>
<td>National evacuation contractual agreements with private sector vendors providing transportation resources and operational planning support capabilities [FEMA].</td>
</tr>
<tr>
<td>Transportation technical assistance and analysis for evacuation operations and evacuation route conditions [ESF1].</td>
</tr>
<tr>
<td>Debris removal and clearance of evacuation routes [ESF3].</td>
</tr>
<tr>
<td>Support of state and local public safety and security measures (e.g., crowd control, traffic management, and control of contra flow lanes used in evacuations) [ESF1].</td>
</tr>
<tr>
<td>Accommodations to ensure that evacuation assistance is inclusive of individuals requiring security escort (e.g., Unaccompanied Children under HHS custody; Undocumented non-citizens, (e.g., Single Adults and Family Units) under DHS custody; prisoners under Bureau of Prisons [ESF13].</td>
</tr>
<tr>
<td>Ensure fuel deliveries along evacuation routes and for emergency responders [ESF12].</td>
</tr>
<tr>
<td>Initiate various waiver requests or actions by other Federal agencies to facilitate evacuation [ESF12].</td>
</tr>
<tr>
<td>Provide security measures (e.g., crowd control, traffic direction, and control of contra flow lanes used in evacuations [ESF13].</td>
</tr>
<tr>
<td>Accommodations to ensure that evacuation assistance is inclusive of individuals with disabilities and others with access and functional needs [ESF6/ODIC].</td>
</tr>
<tr>
<td>Provide medical staging and en route medical support to patients and and to those with medical needs [ESF8].</td>
</tr>
<tr>
<td>Information and coordination for the evacuation of animals, including household pets and service and assistance animals [ESF11].</td>
</tr>
<tr>
<td>Assist in triage, identification/tracking/reunification of owner/animal [ESF11].</td>
</tr>
<tr>
<td>Provide technical expertise in support of state and local -led evacuation [ESF11].</td>
</tr>
<tr>
<td>Activate the FEMA National EMS Contract in coordination with SLTT.</td>
</tr>
<tr>
<td>Coordination of Patient Movement Operations [ESF8].</td>
</tr>
<tr>
<td>Supplemental assistance to state and local jurisdictions in identifying public health, health maintenance, medical needs of survivors, including patient movement evacuation, as well as reunification of children or older adults with an appropriate adult or family member [ESF8].</td>
</tr>
</tbody>
</table>
**Federal Evacuation Support Annex to the Response and Recovery Federal Interagency Operational Plans Base Plan**

- Provide goods and services to support evacuation efforts and transportation services [ESF7].
- Military and/or commercial contract aircraft to support evacuation operations [DOD].
- Issue regulatory waivers and exemptions [ESF1].

- Provide sheltering/housing, feeding, bulk distribution of essential items, and family reunification support and resources to individuals and households that do not have the personal resources, or access to personal resources, to meet these needs [ESF6].
- Provide guidance for the evacuation and collocation of companion animals [ESF11].

- Track movement of evacuees, household pets or service and assistance animals, luggage, durable medical equipment, and essential belongings [ESF6, 11].
- Track patients moved by the National Disaster Medical System (NDMS) from the point of entry into the patient movement system, to the NDMS health facility, and back to their originating location or final destination [ESF8].
- Track triage process for CBRNE operations [ESF10].

### Operational Phases

Operational phases for evacuation and re-entry operations vary based on the level of, size, scope, and complexity of the incident. The Evacuation Operational Phase table identified below serves as a placeholder within the Federal Evacuation Support Annex until a version is approved.

![Evacuation Operational Phases Diagram](image)

*Operational Phases is a placeholder for an approved version*

**Figure 4: Evacuation Operational Phases**
Notice Evacuation

Evacuations may occur in response to various notice incidents, wherein state and local officials must determine whether pre-incident evacuation is a viable and/or practical option. Numerous factors affect this decision process, including the amount of advanced warning, incident severity, and the probability of impact. In general, authorities responsible for issuing pre-incident evacuation orders must balance the high costs associated with the movement of individuals out of a threatened area with the probability of impact.

Hurricane Evacuation Studies (HES) provide data, information, and planning factors to inform state and local hurricane evacuation plans. These studies identify storm-surge flood risk areas, evacuation zones, at-risk populations, public evacuation behavior, potential shelter demand, evacuation routes, and public evacuation clearance times.

To satisfy clearance time requirements, officials may pre-position evacuation resources, including accessible transportation assets, and/or issue evacuation orders well in advance of an incident, despite a low probability of impact at the time the decisions are required. Failure to pre-position evacuation resources and/or issue evacuation orders within the necessary timeframes means resources may not be able to deploy in time to conduct evacuation operations. Competition over limited evacuation resources may adversely affect resource availability (e.g., multiple jurisdictions contracting with a single vendor for resources). The Movement Coordination Center (MCC) at the NRCC and the Interagency Transportation Board serve as mechanisms for deconflicting competing resource requirements.

If evacuations are not complete before the onset of incident-specific hazards (e.g., gale force winds), evacuees may be exposed to dangerous conditions along evacuation routes before arriving at a point of safety.

For a notice incident, state and local officials must determine if there is sufficient time to mobilize resources and evacuate the entire target population from a given area to safety prior to the onset of hazardous conditions.

</tbody>
</table>
No-Notice Evacuation

No-notice evacuations are conducted during and/or after an incident (post-incident) when it is unsafe for the affected population to remain in the area. The amount of time between incident onset and when the evacuation is initiated may limit efforts to pre-position resources. Response activities, including ongoing search and rescue (SAR) operations and the influx of other lifesaving/life-sustaining resources, may adversely affect evacuation operations. Post-incident conditions may require SAR operations to extract survivors from hazardous locations and move them to safer locations. Types of incidents that may require post-incident evacuations include terrorism, earthquakes, tsunamis, wildland fires, long-term power outages, industrial accidents, and flooding.

**Essential Elements of Information**

Essential Elements of Information (EEI) are important and standard information items that incident managers need to make timely and informed decisions. EEIs also provide context and contribute to analysis.

This section presents essential elements of information supplemental to the Response and Recovery FIOPs and broadly applicable to all evacuations and those more specific to each Emergency Support Function (ESF) and Recovery Support Function (RSF).

**Table 7: EEI for ESFs and RSFs**

<table>
<thead>

<tr>
<td>- Reunification services</td>
</tr>
</tbody>
</table>
### EEIs for ESFs and RSFs

- Capacity for feeding
- Key services required in receiving shelters or evacuation centers
- Capacity for sheltering household pets, service and assistance animals near shelters, or for a sheltering service for animals belonging to shelterees.

#### ESF #7 – Logistics

- Status of the logistical supply chain to evacuation specific locations (e.g., reception centers, pick up points, feeding and hydration stations)

#### ESF #8 – Public Health and Medical Services

- Name, location, date, and total number of patients evacuated from medical facilities or location points for ground transportation-assisted evacuation (e.g., ambulance)
- Location of airports where patients will be received for transport and location of airports that will receive evacuated patients (i.e., aerial ports of embarkation and debarkation)
- Information regarding current communicable diseases that could affect shelters or proximity gathering areas
- Number of patient evacuations and patient status category (e.g., critical care/intensive care patient)
- Expected number of patients and type to be evacuated (e.g., litter, ambulatory, pediatric)
- Plans for patients at healthcare facilities to shelter-in-place and/or requirements for the evacuation of healthcare facilities
- Ratios of patient evacuees to medical providers to ensure adequate support (e.g., number of medical staff or number of physicians/nurses per 100 patients)
- Expected surge impact on public health, health systems, and social services resources in host-jurisdictions
- Host-jurisdiction capability and capacity by facility
- Status of healthcare and public health workers remaining in area and/or able to travel to work within health facilities
- Number and operational capabilities of pre-hospital, inpatient, outpatient and home community-based healthcare services to support healthcare dependent populations (e.g. hospitals, long-term care, dialysis facilities within the evacuation area
- Number of at-home patients and of these, the number of at-home patients requiring electrical equipment and/or oxygen

#### ESF #9 – Search and Rescue

- Status of evacuation related search and rescue (SAR) activities

#### ESF #10 – Oil and Hazardous Materials Response

- Status of HAZMAT response capability
- Status of the response to actual or potential oil and hazardous materials incidents affecting the evacuee population
- Status of any actions to stabilize the release and prevent the spread of contamination that may affect the evacuee population
- Status of any environmental cleanup actions or the decontamination of buildings and structures, transportation infrastructure, or routes that would enable re-entry of the affected population
### ESF #11 – Agriculture and Natural Resources
- Status of whole community efforts to support animal evacuations
- Number and type of household pets, service and assistance animals
- Facilities for sheltering animals, including household pets and service and assistance animals

### ESF #12 – Energy
- Infrastructure status, as applicable, to include refineries offline, impacts to pumping stations, natural gas and petroleum pipelines, platform status and evacuations, shut in production numbers, and potential impacts to coal transport
- Status of power restoration to critical infrastructure and patient evacuation points to support lifesaving and life-sustaining medical activities

### ESF #13 – Public Safety and Security
- Status of federal support to state and local law enforcement regarding management of persons with restricted freedoms
- Status of the execution of plans to evacuate and secure correctional facilities
- Status of local police forces remaining in the area who are able to travel/work in their normal or alternate law enforcement facility

### ESF #14 – Cross Sector Business and Infrastructure
- Status of water, power, and telecommunications infrastructure along evacuation routes, destination, and areas where shelter-in-place is ordered.

### ESF #15 – External Affairs
- Status of unified, accessible evacuation messaging to the public
- Availability and capability of IPAWS Alert Authorities to disseminate response-related public messaging - such as lifesaving, life-safety, and key public health messages – to reach impacted populations and diverse audiences, including individuals with disabilities and limited English proficiency, ensuring key Response and Recovery information is accessible to the whole community

**Stabilization Targets**

Objectives clarify what must be accomplished by emphasizing desired end-states. Progress towards achieving outcomes is measured by stabilization targets for each lifeline and its accompanying components. Stabilization targets for each lifeline are developed collaboratively with key stakeholders including local, state, and federal stakeholders. Stabilization targets should reflect goals defined in deliberate planning and should be validated and refined throughout the incident. Table 9 lists example stabilization targets for each lifeline that may have an impact on evacuation operations. Stabilization targets must be validated and adapted by federal, state, tribal, territorial, and local partners during initial operational periods and refined over the response.

Table 9: Stabilization Targets

<table>
<thead>
<tr>

</tbody>
</table>
| **Federal Evacuation Support Annex to the Response and Recovery Federal Interagency Operational Plans**  
| **Appendix** |
| **Shelter** | Sheltering, including reception, capacity, accessibility and wrap-around services, is supporting the displaced population |
| **Food** | Reunification services have been established |
| **Water** | All survivors, their pets, and service animals have access to food, water and sanitation |
| **Public Health** | Public health services are accessible to all survivors |
| **Fatality Management** | Sufficient temporary fatality management support is in place to meet processing demand |
| **Medical Care** | All evacuees, their pets, and service animals in shelters have access to required medical and veterinary care |
| **Medical Supply Chain** | Medical supply chain capable of adequately resupplying medical care providers |
| **Patient Movement** | Emergency medical systems are capable of managing patient movement requirement |
| **Fuel** | Fuel distribution is available for responders |
| **Power** | Sufficient fuel distribution is available for evacuees, including to support individuals dependent on power for life-sustaining medical care |
| **Infrastructure** | Generators are providing temporary emergency power at critical facilities necessary to stabilize other lifelines |
| **Alerts, Warnings, and Messages** | Land mobile radio communications network is operational |
| **911 and Dispatch** | Access to IPAWS Wireless Emergency Alerts (WEA), Emergency Alert System (EAS), NOAA Weather Radio (NWR), and other local alert and warning capabilities (depending on SLTT capacity). |
| **Responder Communications** | Public safety answering points are available to the public |
| **Finance** | Survivors have access to financial services |
| **Highway/Roadway/Motor Vehicle** | Survivors have access to commercial communications infrastructure to contact or be contacted by emergency services |
| **Mass Transit** | Multimodal routes (air, rail, road, port) are clear of debris and accessible by normal or alternate means |
| **Railway** | Evacuation routes are free from any hazardous pollutants |
| **Aviation** | All contaminated areas are identified and secure |
| **Maritime** |  
| **Facilities** |  
| **Hazardous Material, Pollutants, Contaminants** |  

28
Integrating Lifelines and Recovery Driven Outcomes

Although recovery operations often begin concurrently with response operations, they are secondary to lifeline stabilizing response activities due to the risk posed by failure to succeed in response operations. Communities and survivors focus first on immediate needs and next on long-term recovery outcomes. Once lifelines are stabilized and re-established, the focus shifts and expands to the achievement of recovery outcomes. Following a disaster these broad outcomes should be used as the foundation for developing disaster specific SLTT recovery outcomes to guide federal support actions:

</tbody>
</table>
Lines of Effort (LOEs)

LOEs are the incident-specific mission sets required to stabilize the impacted lifelines and achieve recovery outcomes. Identifying the required LOEs enables the Federal Government to link multiple tasks, develop a cohesive strategy across all required ESFs and RSFs to mobilize, employ, and demobilize resources applicable to the mission. LOEs help incident personnel at all levels to visualize how federal interagency capabilities can support SLTT governments to achieve lifeline stabilization targets and recovery outcomes by clearly articulating and communicating the strategy to provide federal support.

Figure 5: Evacuation Lines of Effort
Administration, Resources, and Funding

Administration

Federal agencies are responsible for managing financial activities during all operational phases and across all mission areas within their established processes and resources. The Financial Management Support Annex to the National Response Framework (NRF) provides basic financial management guidance for all federal agencies that provide support for incidents that require a coordinated federal response.

Resources

Federal agencies will provide available personnel to support operations under this annex. Support will be provided on a fully reimbursable basis in accordance with the Stafford Act. Each federal agency possesses policies for personnel augmentation related to its authorities, policies, memorandums of understanding (MOUs), and mutual aid agreements. Federal agencies must ensure that employees engaged in incident response activities are able to perform IAW operations requirements. FEMA will provide just-in-time training to personnel for activities the personnel of supporting Dept/Agencies are not familiar or trained (e.g., evacuation marshalling center for general population evacuees). [See Appendix 1 for a list of Federal Evacuation Resources]

Funding

The funding Authorities specifically applicable to this annex include those in Appendix 8: Authorities and Guidance. These authorities are consistent with those outlined within the Response and Recovery Federal Interagency Operational Plans (FIOPs). Nothing in this annex alters or impedes the ability of federal agencies to carry out their respective authorities and associated responsibilities under law. This annex does not create new authorities nor change existing ones.
Oversight, Coordinating Instructions, and Communications

Oversight

FEMA is the executive agent for this annex and responsible for its management and maintenance. This annex is updated periodically, as required, to incorporate new presidential directives, legislative changes, and procedural changes based on lessons learned from exercises and actual incidents.

Coordinating Instructions

The ESFs provide the structure for coordinating Federal interagency support for a Federal response to an incident. They are mechanisms for grouping functions most frequently used to provide Federal support to States and Federal-to-Federal support, both for declared disasters and emergencies under the Stafford Act and for non-Stafford Act incidents. For a list of Federal support for evacuation, see Table 4 Types of Federal Support.

Communications (Telecommunications & Operational)

The operational requirements and priorities for emergency communications support for a large-scale incident risk is outlined in each Region’s Annex K of the All Hazards Plan. The purpose of Annex K is to assist, in coordination with SLTT governments, with restoration and enhancement of conventional communications needed to support a whole community response effort.

Appendix 1: Federal Evacuation Resources

Federal evacuation support resources are composed of tracking and manifest systems, alert, warning, and notification systems, reunification systems, evacuation support contracts, decision support tools, and personnel.

Tracking and Manifest Systems

Tracking and manifest systems help responders coordinate the movement of evacuees, their household pets, service and assistance animals, and their belongings throughout evacuation and re-entry operations. Most of the tracking systems listed below do not interface with state tracking and manifest systems.

Table 12: Federal Tracking and Manifest Systems

</tr>
</tbody>
</table>
Alert, Warning and Notification Systems

During an emergency, alert, warning and notification systems are essential in providing the public with critical life-saving information. Emergency messaging can address the general public, including individuals with disabilities and access and functional needs as well as people with limited English proficiency, with evacuation information.

During the three 2017 hurricanes, the National Weather Service, State, and local authorities sent nearly 700 alerts using FEMA’s integrated Public Alert and Warning System (IPAWS). Several counties effectively used IPAWS and local warning systems to issue alerts and warnings to mitigate fire-related deaths. During the 2018 wildfires, five local authorities used FEMA’s IPAWS to issues multiple Wireless Emergency Alerts (WEA) and Emergency Alert System (EAS) alerts. A WEA was sent out by the CA Governor’s Office of Emergency Services to alert people of an anticipated fire danger overnight urging citizens to be cognizant and attentive to instructions from local authorities.

### Table 13: Alert, Warning and Notifications

<table>
<thead>
<tr>
<th>Alert, Warning and Notification Systems</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Integrated Public Alert and Warning System (IPAWS)</strong> (FEMA): Allows an authorized alerting authority to send a message that is disseminated simultaneously through multiple communications methods and devices to reach as many people as possible to save lives and protect property. It allows the President and/or delegated officials to address the American people during all emergency or disaster circumstances. These messages address the general public, including individuals with disabilities, access and functional needs, and people with limited English proficiency. The Wireless Emergency Alert (WEA) component of IPAWS provides an interface to participating mobile service providers for the delivery of alert information to individual mobile devices located within a geographically targeted affected area.</td>
</tr>
<tr>
<td><strong>National Warning System (NAWAS)</strong> (FEMA): A 24-hour continuous private line telephone system used to convey warnings to Federal and SLTT government and public safety officials.</td>
</tr>
</tbody>
</table>

Reunification Systems

A reunification system is used to help reunite adults, children, and household pets, service, and assistance animals and to help displaced survivors establish contact with family, friends, legal guardians, and colleagues. FEMA has the statutory requirement to facilitate the reunification of unaccompanied minors with their custodial parents/legal guardians during declared emergencies and provides support to the voluntary reunification of adults with their families.

<tbody>
<tr>
<td><strong>Unaccompanied Minors Registry</strong> (National Center for Missing and Exploited Children): Service that allows the public to report information related to children 18 and under who are separated from their parents, legal guardians, or other relatives because of a disaster. Provides a place for emergency management agencies, law enforcement, shelter staff, hospital employees, schools, childcare institutions, and other organizations to report minors in their care during disasters. With a Presidential declared disaster, the National Center for Missing and Exploited Children can also activate their call center to assist in the location of children and the reunification of</td>
</tr>
</tbody>
</table>
families resulting from the disaster or subsequent evacuations. The National Mass Evacuation Tracking System (referenced above) includes some elements of the Unaccompanied Minors Registry, allowing for the intake of information about children who have been separated from their parents/legal guardians. [www.missingkids.com](http://www.missingkids.com)

### National Reunification Systems

National Mass Evacuation Tracking System (FEMA) includes some elements of the Unaccompanied Minors Registry, allowing for the intake of information about children who have been separated from their parents/legal guardians. [www.missingkids.com](http://www.missingkids.com)

### National Evacuation Contracts

FEMA maintains four evacuation-specific contractual agreements with private sector vendors for the provision of transportation resources and operational planning support capabilities. Each evacuation contract may provide varying degrees of support; however, transportation assets will only be provided through the National Medical Transport and Support Contract or the Air Transportation Support Services Contract. A cost share to the SLTT may be associated with an activation of the National Evacuation Contracts.

#### Table 15: National Evacuation Contracts

<table>
<thead>
<tr>
<th>National Medical Transport and Support Contract (FEMA) aka NEMS Contract: Activated to evacuate patients and individuals who need assistance evacuating from an area at significant risk or to provide pre-hospital care and patient transport services in a region that has been affected by a disaster.</th>
</tr>
</thead>
<tbody>
<tr>
<td>General Population Evacuation Planning and Operational Support Contract (FEMA): Provides evacuation planning and operational support to facilitate the use of motor coaches to evacuate the general population in response to presidentially declared emergencies and major disasters. Place of performance includes United States, its territories, and possessions. This contract provides generalized non-medical evacuation planning for a large-scale motor coach evacuation operation and disaster-specific non-medical evacuation planning and operational support to facilitate the motor coach evacuation of critical transportation needs (CTN) general population evacuees. <strong>This contract does not provide motor coaches</strong>, but instead provides support to motor coach operations. Arrangement for the motor coaches remain a responsibility of state and local emergency management. This contract includes or may provide:</td>
</tr>
<tr>
<td>- Activation of central dispatch operations – command and control;</td>
</tr>
<tr>
<td>- Crisis action planning if no state plans exist;</td>
</tr>
<tr>
<td>- Contractor evacuation liaison/subject matter expert (SME) support at all key motor coach operational sites; and</td>
</tr>
<tr>
<td>- Fleet management coordination – deployment of management staff to motor coach operations sites; Establishing/operating Vehicle Staging Areas and Vehicle Refresh Points.</td>
</tr>
<tr>
<td>Air Transportation Support Services Contract (FEMA): Through the Air Transportation Support Services Contract, FEMA has contracted to provide additional operational flexibility for the safe and efficient transport of people, teams, equipment, and assets in response to declared or undeclared emergencies within the United States, its territories, and possessions. This contract includes or may provide:</td>
</tr>
<tr>
<td>- Passenger manifesting holding;</td>
</tr>
<tr>
<td>- All aviation ground support equipment (e.g., tugs, baggage carts), services, and personnel;</td>
</tr>
<tr>
<td>- Baggage loading;</td>
</tr>
<tr>
<td>- Aviation expertise, liaison, and staff support, and</td>
</tr>
<tr>
<td>- Aviation SMEs with contingency and emergency airfield operations experience;</td>
</tr>
<tr>
<td>- Airfield site services</td>
</tr>
</tbody>
</table>
National Evacuation Contracts

Air Evacuation Aviation Ground Support Contract (FEMA): Supports the ability to rapidly obtain aviation ground support services at U.S. airports. Contract support includes passenger services for up to 20,000 non-medical CTN evacuees, including individuals with disabilities and others with access and functional needs, for a large-scale air evacuation at airfields that have undergone the pre-planning component and/or crisis action or adaptive operational planning for airfields that do not have an evacuation plan. Place of performance includes United States, its territories, and possessions. This contract includes or may provide:

- Passenger manifesting/holding;
- All aviation ground support equipment (e.g., tugs, baggage carts), services, and personnel;
- Baggage loading;
- Aviation expertise, liaison, and staff support; and
- Aviation SMEs with contingency and emergency airfield operations experience.

Decision Support Tools

Various decision support tools may be employed to support evacuation planning and operations, including those in the table below.

Table 16: Federal Decision Support Tools

<table>
<thead>
<tr>
<th>Federal Decision Support Tools</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>HURREVAC</strong> (FEMA, U.S. Army Corps of Engineers, National Oceanic and Atmospheric Administration [NOAA]): HURREVAC (short for Hurricane Evacuation) is a storm tracking and decision support tool of the National Hurricane Program, administered by FEMA, the United States Army Corps of Engineers (USACE), and the NOAA National Hurricane Center. The program combines live feeds of tropical cyclone forecast information with data from various state Hurricane Evacuation Studies to assist the local emergency manager in determining the most prudent evacuation decision time and the potential for significant storm effects, such as wind and storm surge. <a href="http://www.hurrevac.com/hes.htm">http://www.hurrevac.com/hes.htm</a></td>
</tr>
<tr>
<td><strong>National Disaster Medical System Bed Availability Report</strong>: Over 1,800 civilian hospitals in the United States are voluntary members of the NDMS, providing approximately 100,000 hospital beds to support NDMS operations in an emergency. When a civilian or military crisis requires the activation of the NDMS, participating hospitals communicate their available bed types and numbers to the U.S. Transportation Command, Command Surgeon's Office, so that patients can be distributed to several hospitals without overwhelming any one facility. Participating hospitals report the current number of available beds (within 4 hours) and the maximum number of beds, by category—Burn, Critical Care, Medical/Surgical, Negative Pressure Isolation, Pediatric Intensive Care, Pediatric, and Psychiatric—that could be made available within 24 to 72 hours. <a href="https://www.phe.gov">https://www.phe.gov</a></td>

</thead>
<tbody>
<tr>
<td><strong>TRANSCOM Regulating, Command, and Control Evacuation Systems (DOD):</strong> Automated information system that combines transportation, logistics, and clinical decision elements into a seamless patient movement automation information system. It is capable of visualizing, assessing, and prioritizing DOD patient movement requirements, assigning resources, and distributing relevant data to deliver patients evacuated by DOD efficiently. The system automates the processes of medical regulation (assignment of patients to suitable medical treatment facilities) and aeromedical evacuation during peace, war, and contingency operations. <a href="https://www.ustranscom.mil/">https://www.ustranscom.mil/</a></td>
<td></td>
</tr>
<tr>
<td><strong>Transportation Analysis and Simulation System (TRANSIMS) (U.S. Department of Transportation, U.S. Department of Energy, and U.S. Environmental Protection Agency):</strong> TRANSIMS provides travel modeling procedures designed to meet state department of transportation and metropolitan planning organization needs for more accurate and more sensitive travel forecasts for transportation planning and emissions analysis. The system provides detailed data on travel, congestion, and emissions, information that is increasingly important to investment decisions and policy setting. Since the system simulates and tracks travel by individuals, the benefits to and impacts on different geographies and travel markets can be evaluated as well. The system also has the capability to evaluate highly congested scenarios and operational changes on highways and transit systems.</td>
<td></td>
</tr>
<tr>
<td><strong>Nuclear Evacuation Analysis Code (Department of Energy):</strong> Developed by Sandia National Laboratories to support the analysis of shelter-evacuate strategies following an urban nuclear detonation. This tool can model a range of behaviors, including complex evacuation timing and path selection, as well as various sheltering or mixed evacuation and sheltering strategies. The calculations are based on externally generated, high-resolution fallout deposition and plume data. Scenario setup and calculation outputs make extensive use of graphics and interactive features. This software is designed primarily to produce quantitative evaluations of nuclear detonation response options. However, the outputs have also proven useful in the communication of technical insights concerning shelter-evacuate tradeoffs to urban planning or response personnel.</td>
<td></td>
</tr>
<tr>
<td><strong>Real-time Evacuation Planning Model:</strong> Originally developed for the DHS Science and Technology Directorate, the Real Time Evacuation Planning Model is a free, hands-on evacuation-planning tool that was designed to help municipal and regional planners understand and prepare for emergencies. The Real Time Evacuation Planning Model estimates the time required for evacuating vehicles to clear a user-defined area for a variety of evacuation scenarios. The number and speed of evacuating vehicles are determined by user-assigned or modified variables, such as the time of day when an evacuation starts, evacuation rate, the population’s participation rate, and the number of people per vehicle, using parameters provided within the model.</td>
<td></td>
</tr>
<tr>
<td><strong>Geocentric Environment for Analysis and Reasoning (USACE):</strong> A software suite used to simplify the analysis/decision-making process by bringing spatial data and decision analysis into one place. Gears™ spatially and temporally enables decision analysis, providing users with a robust suite of capabilities to efficiently and intuitively assess, analyze, and compare alternative outcomes. Gears™ provides decision, planning, and real-time support for a broad spectrum of mission areas and specific user cases, to include humanitarian assistance and disaster response efforts, medical communities, tactical situational awareness, operational level planning, environmental analyses, socio-cultural influences, and resilience and vulnerability analyses. <a href="http://www.erdc.usace.army.mil/Locations/GRL.aspx">www.erdc.usace.army.mil/Locations/GRL.aspx</a></td>
<td></td>
</tr>
</tbody>
</table>

### Federal Decision Support Tools

| **HHS emPOWER Map and Representational State Transfer (REST) Service:** | Developed by the U.S. Department of Health and Human Services Office of the Assistant Secretary for Preparedness and Response and Centers for Medicare and Medicaid Services to provide a free, monthly updated, publicly available tool and service that provides the total number of Medicare beneficiaries, down to the zip code, that live independently in a community and have a claim for 14 types of electricity-dependent durable medical equipment and devices that include: ventilator, BiPAP, oxygen concentrator, enteral feeding machine, intravenous (IV) infusion pump, suction pump, at-home dialysis machine, left ventricular assistive device (LVAD), right ventricular assistive device (RVAD), bi-ventricular assistive device (BIVAD), and total artificial heart (TAH), electric wheelchair, electric scooter, and electric bed equipment. [https://empowermap.hhs.gov](https://empowermap.hhs.gov) |
| **Response Decision Support Matrix:** | An analysis developed in the Planning Division and NRCC/PSS to support Leadership decision making for pre-event and no-notice events by providing an analysis of impacts and possible/probable cascading effects. Vital to the analysis, in support of senior leadership decision making, is a timeline that lists essential tasks to be performed within the timeline. |
| **Prioritizing Operations Support Tool (POST):** | Post is a method for prioritizing collection of imagery during disaster response. The tool, currently available as an [ArcGIS Pro Toolbox](https://gis.fema.hub.arcgis.com/), was designed to help FEMA and the disaster response community prioritize response operations during disasters with a focus on collection of satellite imagery. The POST can be implemented across the wider disaster response community, i.e., search and rescue, logistics, planning, etc. Currently, POST relies on three main data resources to determine priorities: 1) **HAZARD DATA:** Hazard extent, flood depth grids, wind speed etc., 2) **STRUCTURAL DATA:** Residential parcels (point on structure), 3) **POPULATION VULNERABILITY DATA:** 13 population vulnerability criteria derived from ACS Census data. [https://gis.fema.hub.arcgis.com/](https://gis.fema.hub.arcgis.com/) |
| **FEMA Authoritative Disaster Journals** | FEMA’s Disaster Journals are meant to offer a broad situational overview during a disaster and be a collection of applications and data specific to that disaster. |
| **• Earthquake Incident Journal** | - provides relevant spatial decision-making support for FEMA leadership and a view into federal information available to the general public. This journal displays data from the US Geological Survey (USGS). This website is a part of the FEMA GeoPlatform. |
| **• Flood Incident Journal** | - provides relevant spatial decision-making support for FEMA leadership and a view into federal information available to the general public. This website is a part of the FEMA GeoPlatform. |
| **• Hurricane Journal** | - Surge analysis will update if greater than 10% chance of 5’ or more of Surge Inundation. Wind analysis will update if greater than 50% chance of hurricane force winds (64 knot, 74 mph) over land. Based on NOAA’s latest advisory. |
| **• Tornado Incident Journal** | This journal displays data from the National Oceanic and Atmospheric Administration's Storm Prediction Center (NOAA SPC). This website is a part of the FEMA GeoPlatform. |
Federal Decision Support Tools

FEMA’s Authoritative Lifeline Dashboards –

- Communication Lifeline Dashboard - FCC's Disaster Information Reporting System (DIRS) data is used to visualize and report cell tower outages, Public Safety Access Points (PSAP), AM transmission towers, and Microwave Service Towers aggregated to the county level.
- Energy Lifeline Dashboard (Internal Dashboard (Internal Geoportal) - Energy Lifeline Dashboard for Power & Fuel. Must be on the FEMA internal network in order to view this dashboard.
- Hazard & Waste Lifeline Dashboard - Datasets from EPA's Facility Registry System (FRS), Superfund Sites, Nuclear facilities, Solid Waste Landfills, and Biological Processing Facilities. Hazardous Material Routes, petroleum ports, and gas pipelines are also included.
- Health and Medical Lifeline Dashboard – All aspects of medical services required during a disaster, including survivor medical care, public health, and the medical industry. HHS's emPOWER Program supplies electricity-dependent medical equipment data, Rx Open live open pharmacy data.
- Transportation Lifeline Dashboard: Waze (Internal) - WAZE's Connected Citizens Program (CCP) Live Alerts Layer, as well as HERE's traffic service, through ESRI's World Traffic Service. This information is updated every 30 minutes. [https://gis-fema.hub.arcgis.com/](https://gis-fema.hub.arcgis.com/)

Personnel

Evacuation Liaison Team (*U.S. Department of Transportation*): The Evacuation Liaison Team is a non-deployable team that supports regional hurricane response efforts by facilitating the rapid, efficient, and safe evacuation of threatened populations.

</thead>
<tbody>
<tr>
<td>Federal Railroad Administration (FRA)</td>
<td>The FRA may stop or limit rail service, including freight and passenger service and some commuter rail service, to abate unsafe conditions. This authority applies to all railroad service that is connected to the general freight and passenger rail system. This authority does not extend to rail rapid transit systems that are not part of the general railroad system.</td>
</tr>
</tbody>
</table>

### Non-Evacuation-Specific Resources

During notice and no-notice incidents, the following non-evacuation-specific resources are to be employed for evacuation purposes if needed and available:

#### Table 18: Non-Evacuation-Specific Resources

<table>
<thead>
<tr>
<th>Resources</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Air transportation (e.g., commercial and military air carriers)</td>
<td>In the event of a large-scale evacuation, contracted methods of transportation (e.g., buses, ambulances) may become overwhelmed requiring additional transport means to quickly and safely evacuate a threatened population.</td>
</tr>
<tr>
<td>Ground transportation (e.g., cars, ambulances, accessible transport buses)</td>
<td>Non-traditional emergency transport vehicles, commercial and non-commercial, may be required to transport evacuees from an impacted area to a safe environment. Such vehicles may include school buses, taxis, ride sharing services, etc.</td>
</tr>
<tr>
<td>Ground transportation support services (e.g., fuel)</td>
<td>A consistent supply of fuel is vital along evacuation routes for evacuees and responders. Additional commercial fuel suppliers will be required to fill gaps in the fuel distribution process.</td>
</tr>
<tr>
<td>Maritime transportation (e.g., cruise ships, ferries)</td>
<td>During 911 response operations, tugboats and ferries were used to evacuate people from the impacted area.</td>
</tr>
<tr>
<td>National Disaster Medical System (NDMS)</td>
<td>When disaster strikes, people need health professionals they can count on to protect health and augment healthcare systems to stabilize patients and save lives. NDMS is called into action at the request of SLTT authorities or by other federal departments to provide patient care, patient movement, and definitive care; contribute veterinary services; furnish fatality management support; and more.</td>
</tr>
<tr>
<td>Integrated Public Alert and Warning System (IPAWS)</td>
<td>IPAWS can target specific geographic areas to aid in evacuation operations by rapidly transmitting to the public all-hazards alerts, warnings, and notifications.</td>
</tr>
<tr>
<td>Geographic information systems (e.g., GeoHealth Platform) HHS</td>
<td>The GeoHealth Platform was used during the 2018 Unaccompanied Children Reunification mission to integrate data from multiple Federal agencies, including the U.S. Immigration and Customs Enforcement (ICE) and HHS/Administration for Children &amp; Families Office of Refugee Resettlement, with ADPR data on deployed personnel. The tool was used to create and share several mapping products for the event. In the event of a mass migration, especially as it pertains to migrant children, the product would be beneficial in tracking and assisting vulnerable populations.</td>
</tr>
</tbody>
</table>
Appendix 2: Federal Evacuation Support and Coordination

Options for evacuation support and coordination within the National Response Coordination Center (NRCC)

FEMA coordinates federal evacuation planning and preparedness efforts through a joint effort between FEMA’s Response and Recovery divisions. In the event that federal support to state and local evacuation operations is required, multiple options exist for coordinating federal evacuation support within the NRCC. The three proposed options include:

➢ Maintain the existing (standard) coordination structure.
➢ Establish a planning cell to support evacuation operations within the Planning Support Section (PSS).
➢ Establish an Evacuation Support Crisis Action Planning (CAP) Team

Consistent with the FEMA National Incident Support Manual (2013), the FEMA Administrator, or delegated official, will activate the NRCC to one of four activation levels\(^\text{16}\) in response to a potential or actual incident. Each of the options can be implemented independently of the associated activation level if incident requirements dictate. The structure of the National Response Coordination Staff (NRCS) is such that it is able to expand and contract to meet the needs of the incident.

<table>
<thead>
<tr>
<th>Table 19: Federal Evacuation Support Coordination Options</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Standard NRCC Structure</strong></td>
</tr>
<tr>
<td>Level 3 or Level 2 Incidents Notice Incidents with minimal federal support</td>
</tr>
</tbody>
</table>

**Maintain Existing (Standard) Coordination Structure – Level 3 or Level 2 Activation**

A Level 3 or Level 2 activation of the NRCC may require subject matter expertise in federal evacuation support capabilities to address state requests. According to the National Incident Support Manual, federal evacuation support is addressed by three unit-level NRCC components. Under the existing structure of the NRCC, evacuation subject matter experts (SMEs) are accessed independently within these groups (Figure ).

---

Figure 6: NRCS Organization Chart highlighting integration of SMEs
[The depicted version is currently going through a revision]

Mass Care/Emergency Assistance Unit: Ensures that appropriate mass care / emergency assistance services and resources—sheltering; feeding; distribution of emergency supplies; reunification services; and support to individuals with disabilities and others with access and functional needs, children, and animals, including household pets and service and assistance animals—are identified and available to support the incident.

Public Health and Medical Services Unit: Coordinates assistance for public health and medical surge requirements, including patient movement.

Engineering and Public Works Unit: Coordinates assistance for communities for debris removal to facilitate both entry of emergency workers as well as the evacuation and return of the public; also provides assistance for the restoration of public and private non-profit facilities.

Establish a Planning Cell to Support Evacuation Operations – Level 2 or Level 1 Activation

A Level 2 or Level 1 activation of the NRCC may require SMEs to provide evacuation-specific planning support and/or guidance for all levels of response/recovery operations. For notice incidents projected to have catastrophic impacts and/or that require a high level of direct federal assistance to state and local evacuation efforts, an Evacuation Support Planning Cell (Figure 8) can be established within the PSS of the NRCS. This planning cell will provide evacuation subject matter expertise for national-level incident support for both the current and future planning units.
The Evacuation Support Planning Cell is scalable and adaptable to the complexity of the incident and can fully or partially activate as the needs of the NRCS require. Serving as a planning support capability, the planning cell does not exercise command and control authority over incident management or support personnel, but instead serves in an advisory capacity. The planning cell will integrate into the existing coordination structure of the NRCS PSS. This planning cell will enable coordination between the unique aspects of evacuation operations and does not duplicate or replace the responsibilities of any Emergency Support Function (ESF) or Recovery Support Function (RSF).

Representing their agency, members of the Evacuation Support Planning Cell play an important role on the NRCS as evacuation support SMEs who address the Critical Information Requirements (CIRs), key issues, and challenges as outlined in this annex.

**Evacuation Support CAP Team– Level 1 Activation**

A Level 1 activation of the NRCC with requirements to support a large-scale evacuation may require the establishment of an Evacuation Support CAP to serve as a national-level coordination mechanism for evacuation operations. Evacuation support operations, particularly for catastrophic no-notice events (e.g., earthquake, tsunami, and improvised nuclear device detonation) are expected to strain the existing structure of the NRCC staff. Due to the cross-functional nature of evacuation support operations, it is anticipated that significant additional federal agency liaisons, experts, and operators would be required to handle evacuation specific information, resource requests, and resource adjudication. Transportation resource adjudication occurs with the Interagency Transportation Board through the Movement Coordination Center (MCC) in the NRCC. The task could be modified as needed to address re-entry operations or the remnants of the CAP could be integrated into a Recovery and Housing CAP. A notional composition of the CAP within the NRCC is shown in Figure 9.

The Evacuation Support CAP is scalable, adaptable to the size of the incident, and able to fully or partially activate as the needs of the NRCC require. The CAP would augment the existing coordination structure of the NRCC. This CAP will coordinate the unique aspects of evacuation operations and does not duplicate or replace the responsibilities of any Emergency Support Function (ESF) or Recovery Support Function (RSF).
Representing their agency, members of the CAP play an important role within the NRCS as evacuation support SMEs who address the Critical Information Requirements (CIRs), key issues, and challenges outlined in this annex.

Anticipated Additional Evacuation Staffing Allocation

As with any activation staffing decision, it cannot be determined in advance precisely which agency capabilities or expertise will be required to support an incident. NRCS leadership will determine the level of activation and corresponding agency representation. Based on anticipated evacuation support requirements, the following federal agency capabilities are identified for possible inclusion within the Level 1 Evacuation Support CAP:

<table>
<thead>
<tr>
<th>Anticipated Additional Evacuation Staffing Allocation</th>

<td>U.S. Coast Guard (USCG)</td>
</tr>
<tr>
<td>U.S. Department of Commerce (DOC)</td>
</tr>
<tr>
<td>U.S. Department of Energy (DOE)</td>
</tr>
<tr>
<td>U.S. Department of Health and Human Services</td>
</tr>
<tr>
<td>(HHS)</td>
</tr>
</tbody>
</table>
Appendix 3: General Population Evacuation Support

This appendix outlines key concepts and best practices related to general population evacuation coordination, as well as federal capabilities and resources that may be utilized in support of state- and locally led general population evacuation efforts. This appendix applies to notice and no-notice incidents that pose a significant threat to the impacted population and includes all activities associated with general population evacuation, such as fuel, first aid, hygiene, and hydration/feeding support for self-evacuee and transportation-assisted evacuee populations, including their service and assistance animals along with repetitive public messaging, alerts, warnings, and notifications.

The majority of the affected population anticipated to evacuate falls into the general population category. The general population includes individuals of all ages, races, genders, cultures, and religions as well as those with limited-English proficiency, individuals with disabilities and others with access and functional needs—including those who under normal conditions require home or community-based services to obtain medical care or to have their healthcare needs met, and persons with restricted freedoms.

Evacuation Facility Terms of Reference

**Embarkation Point/Site** (also Evacuation Point/Site/Center, Pick-up Point/Site, Assembly Point, Transportation Point): Intake, processing, and departure site designated for the movement of government transportation-assisted evacuees, their animals, including household pets and service and assistance animals, luggage, and any durable medical equipment. Embarkation modes of transportation include air, ground, and maritime. Government transportation-assisted evacuees may be registered, tracked, assessed for issues or needs, and placed on transport for evacuation to an Arrival Point.

**Debarkation Point/Site** (also Transfer Point, Reception Processing Site, Shelter): Site designated to receive transportation-assisted evacuees. Means of transportation may be by air, rail, bus, or maritime, as needed.

**Arrival Point**: Any facility or point of entry into a host-state/host-jurisdiction that assists evacuees. Arrival Points may include Transfer Points and Reception Processing Sites for transportation-assisted evacuees, Welcome Centers and Information Points for self-evacuees, and shelters and other congregate facilities.

**Transfer Point** (also Assembly and Transfer Center): If applicable, locations where transportation-assisted evacuees move from their initial evacuation modes of transportation onto other transportation modes to be transported to a Reception Processing Site or a shelter. Depending on drive times and/or distances, relief drivers and/or vehicles may be needed to comply with federal and/or state safety regulations.

**Reception Processing Site** (also Community Reception Center): An interim site along an evacuation route to provide mass care and other emergency services to evacuees arriving in a host location via government transportation. A Reception Processing Site may be located within an impact-jurisdiction (although outside the impact area) or in a host-jurisdiction. It is intended to provide life-sustaining services, such as feeding, hydration, basic medical support, and assignment and transportation to a shelter. Additional services may include disaster and local weather information, reunification, and crisis counseling. Temporary sleeping space may also be provided while needs are being evaluated or if the
arrival takes place late at night. Separate areas should be arranged for unaccompanied minors, for people without identification, and for individuals subject to judicial and/or administrative orders restricting their freedom of movement. Community Reception Centers may also be used for processing evacuees returning to the impact-jurisdiction. Typically, self-evacuees are not processed at a Reception Processing Site and should be directed to an Information Point at a separate location.

**Information Points or Welcome Centers:** Located on or near main evacuation routes, interstate highways and state borders, these facilities are generally state-sponsored and located at state points of entry (e.g., rest areas, tourist centers) and provide self-evacuees:

- Information and/or directions to shelter facilities;
- Restroom facilities that are accessible;
- A temporary rest during their evacuation;
- A place to recharge mobile telephones or other electronic devices; and
- Access to limited canteen and hydration provisions;
- Access to durable medical equipment

**Concept of Operations**

Transportation-assisted evacuees and self-evacuees may seek and/or require assistance from a state other than the impact-state, which could include shelter, housing, feeding, medical support, and financial and/or other social services assistance. If support is requested by an impact-state or FEMA, a host-state/host-jurisdiction may receive and provide support to government transportation-assisted evacuees.

Operational tasks are based on short-term, intermediate, and/or long-term evacuee support timelines. Because timeframes will change depending on the circumstances of each event, definitions for short-term, intermediate, and long-term are fluid and prone to change. Federal timeline guidelines are:

- **Short-term** – Days to weeks: Support prior to and immediately following the event
- **Intermediate** – Weeks up to six months: Recovery, sheltering, temporary housing, permanent housing
- **Long-term** – Six months to years: Recovery and resettlement; temporary housing and permanent housing.\(^{17}\)

A large-scale mass evacuation in the impact-jurisdictions and subsequent operations in host-jurisdictions may result in federal involvement and support. The state Emergency Operations Center (EOC) coordinates with the FEMA Regional Response Coordination Center (RRCC) and Joint Field Office (JFO). One or more RRCCs may receive federal-level coordination from the NRCC. Additional federal support may be requested following a Presidential major disaster or emergency declaration for the impact-state. Support resources must be requested and approved through the impact-state’s JFO.

---

\(^{17}\) The length of time required for long-term evacuee support varies by circumstance; however, the federal definition for reimbursement is up to 18 months in interim housing, including time spent in transitional sheltering.
Operational Considerations for General Population Evacuation Support

Outbound Transport

- **Fuel Support – ESF #1**
  The Defense Logistics Agency (DLA) may receive a mission assignment to coordinate with the private energy sector, other agencies, and impact- and host-states to have fuel supplies redirected to the area in order to ensure that fuel is available for responders and evacuees along evacuation routes.

- **The Department of Energy (DOE) – ESF#12**, in coordination with other federal departments and agencies and impact- and host-states, may assist in the redirection of fuel
supplies to the area in order to ensure that fuel is available for responders and evacuees along evacuation routes.

- **Transportation Support – ESF #1**
  To minimize traffic congestion and increase clearance times, the use of mobile message boards and signage along evacuation routes is advised to inform self-evacuees of traffic hazards and the locations of Welcome Centers and Information Points, shelters, fueling exits, and hospitals.

- **Evacuee Identification**
  Evacuees who are foreign nationals and/or diplomats who have foreign identification, such as visas or passports, rather than U.S. government identification may require alternative processing, including communication with and support from an appropriate federal agency (e.g., DOS).

**Evacuees/Shelters**

- **First Aid, Hygiene, Feeding, and Hydration – ESF #6**
  Some general population evacuees will become sick or injured before they enter a travel conveyance. When the sickness or injury exceeds the level of general first aid, then the individuals will be referred to supporting medical team(s) and evaluated for onward movement/travel or referral to the nearest appropriate medical facility.

  If individuals become sick or injured while traveling, the authority over the travel conveyance will notify the operational control element at the destination of the incident and request ambulance and medical personnel to meet the travel conveyance to evaluate the individual for further transport to the nearest medical facility.

  Further information can be obtained by viewing the Emergency Support Function #6 – Mass Care, Emergency Assistance, Temporary Housing, and Human Services Annex to the National Response Framework (NRF).

- **Individuals with Disabilities and Others with Access and Functional Needs – ESF #6**
  Individuals having access and functional needs may include, but are not limited to, individuals with disabilities, older adults, and individuals with limited-English proficiency, limited access to transportation, and/or limited access to financial resources to prepare for, respond to, and recover from the emergency.

  Federal civil rights law and policy require relief and assistance activities be accomplished in an equitable and impartial manner, without discrimination, including on the basis of race, color, national origin, religion, sex, age, disability, English proficiency, and economic status. These provisions protect many individuals with access and functional needs.

- **Animals, including Household Pets and Service/Assistance Animals – ESF #11**
  Evacuating populations will bring their animals with them. When feasible, household pets, service and assistance animals should remain with their owners during transport. By law, service animals—and, in some cases, assistance animals—must remain with the owner at all times.
However, if commercial charter or military air is provided by DOD, only service and assistance animals will be transported with their owners.

- **Evacuee Tracking – ESF #6**  
  Tracking transportation-assisted evacuees allows impact- and host-jurisdictions to track the movement of evacuees, as well as their animals, including household pets and service and assistance animals, luggage, and durable medical equipment. Tracking also provides information for family reunification purposes and supports record-keeping efforts for federal reimbursement policies. Tracking should begin as soon as possible and may occur in the impact area prior to the point at which evacuees board transport, at Arrival Points, or at shelters in host-jurisdictions.

- **Reunification Services – ESF#6**  
  Individuals and families and their household pets, service, and assistance animals may become separated during evacuation and may require reunification support. FEMA coordinates deployment of national reunification resources such as systems, staff, and equipment to support state-led reunification task forces as well as field operations.

- **Host-State/Tribal Evacuee Support**  
  Host-states may receive both self-evacuees and/or transportation-assisted evacuees. Self-evacuees who stay in a non-congregate shelter in the community (e.g., with family, friends, in a hotel/motel) rather than in shelters will often be self-sufficient; however, as their personal resources become strained, they may turn to the host-state for a variety of support needs such as sheltering, transportation access to social programs, medical appointments, banking, shopping, and/or feeding. Host-states should factor non-congregate sheltered self-evacuees into their analyses and plans.

  Evacuating populations leaving an impact area and arriving in a host area will include people with health, medical, or wraparound/supportive services needs that normally require healthcare or home and community-based services. Healthcare or wraparound/supportive services that may have existed prior to evacuation may be needed to be addressed to maintain evacuees’ health and wellbeing. Evacuees will need an initial assessment as well as ongoing healthcare and wraparound/support services while in host areas. Many of the medical support and assessment procedures are the same—whether they take place in the impact area prior to evacuees being transported or when they arrive in host areas. Assistance will be required to connect/re-establish evacuees with healthcare and home and community-based service providers (PA policies for seeking reimbursement for Host State evacuation sheltering activities are listed in PAPPG v4).

- **Transition to Sheltering – ESF #6**  
  Initial evacuee support consists primarily of mass care. However, once immediate life-safety considerations have subsided; some evacuees may need shelter or accessible housing for a longer duration. This may include transitional sheltering (e.g., congregate or non-congregate shelters) or temporary housing (e.g., transportable temporary housing units [Manufactured Housing Units, RVs, and TTs] temporary housing units [apartments]). Many disaster survivors in less impacted areas who evacuate may be able to return to their homes quickly after the disaster, if not immediately. However, evacuees using their own resources to meet their emergency needs for shelter (e.g., staying in a motel or with friends or family) are often able to maintain their shelter
for only a brief time before their resources are exhausted and they may then turn to other available congregate and/or non-congregate shelter options (*SLTTs are required to obtain prior approval from FEMA HQ before implementing non-congregate sheltering operations*).

Transportation may also be needed to return evacuees to their home areas once they are deemed safe and accessible or to alternative destinations if home areas are uninhabitable.

Further information is available in the Evacuee Support Planning Guide (FEMA P-760/Catalog No. 09049-2).

**Additional Operational Considerations**

- **Decontamination – ESF #10**
  If the incident precipitating evacuation involves contamination by hazardous materials, evacuees may require decontamination. In order to limit the spread of contamination and impact to evacuees and response personnel, decontamination should take place as soon as possible and preferably before evacuees enter any evacuation facility or mode of evacuation transportation. Contaminated patients will not be evacuated without first being decontaminated. Any return to pre-disaster locations will be dictated by remaining contamination. Decontamination efforts may be required prior to re-entry.

- **Evacuation of Correctional Facilities – ESF #13**
  The correctional system in the United States is composed of (1) incarceration within correctional facilities (e.g., jails, prisons) of individuals (inmates) involved in perpetrating crimes, (2) community supervision of individuals conditionally released from prison (parole), and (3) conditional liberty or provisional freedom (probation) for individuals.

  **Jail** – Containment area for suspected offenders who are awaiting trial or sentencing. These individuals are not necessarily guilty of any crime. Many jailed persons are eventually found not guilty of any crimes and ordered released by the courts.

  **Prison** – Unlike jails, prisons are established for convicted felons. These institutions are maintained for both punishment and reform. Prisons have several security classifications (High, Medium, Low, and Minimum) that typically correspond to the seriousness of a convicted offender’s crime, their demonstration of intent, and their capacity to harm others (such as inmates and correctional personnel) during incarceration.

The custody and care of inmates occurs at the federal, state, and local levels. The evacuation of secure correctional facilities will require a coordinated effort between state and local law enforcement and corrections officials, publicly run and privately-operated institutions (if applicable), and federal agencies, such as the Department of Justice Federal Bureau of Prisons, DHS, the Bureau of Immigration and Customs Enforcement, and the U.S. Marshals Service.
The Bureau of Prisons is responsible for the administration of the federal prison system. Direct emergency assistance to non-federal correctional systems is limited to those systems with which the Bureau of Prisons has a memorandum of understanding (MOU).

Bureau of Prisons institutions have included state, county, and local resources in their institution contingency planning and overall emergency preparedness plans and these plans may include agreements with local non-federal agencies for specific assistance:

**Request for Assistance:** An outside request for assistance comes from a high-level state authority and can be approved only by a Bureau of Prisons Warden or Acting Warden, in consultation with the appropriate Bureau of Prisons Regional Director.

**Type of Assistance Provided:** Emergency transportation via Bureau of Prisons buses, ambulances, and vans, driven by trained Bureau of Prisons staff, may be used to transport prisoners who are in a state or county correctional entity’s custody.

**Detention:** The Bureau of Prisons may take into custody detention inmates being held for trial or convicted of criminal offenses in the state courts and who are duly detained by the state correctional entity. Such prisoners may be accepted for detention on a Bureau of Prisons bus or in a Bureau of Prisons facility. Detention on a bus differs from simply providing transportation in that the prisoner is transferred into temporary Bureau of Prisons custody and is subsequently supervised by Bureau of Prisons staff. Such a transfer of prisoners into Bureau of Prisons custody requires the existence of a contract that allows the Bureau to assume the offenders’ custody (18 U.S.C. 5003).

- **Individuals with Restricted Freedoms – ESF#13**
  States may require shelters for evacuees who are subject to judicial and/or legislative orders restricting their freedom of movement and cannot be sheltered with the general population, such as sex offenders. Many shelter providers do not disqualify registered sex offenders from admission into a shelter. However, shelters must comply with local, state, and federal laws regarding sheltering of sex offenders. If a sex offender is prohibited by local or state law from staying in a shelter, they are identified and housed by the appropriate authorities in a separate facility, such as a motel or homeless shelter.

- **Domestic/Sexual Violence Shelter Guidance**
  Due to the potential for an increase in domestic/sexual violence following a disaster, disaster responders and providers should be aware of the additional safety concerns and needs of families experiencing domestic/sexual violence. Mass care emergency shelters may compromise the safety of domestic and sexual violence victims and their children, household pets, service and assistance animals and alternative shelter options may need to be considered. Host-jurisdictions should ensure that children’s services are available for families exposed to a disaster or domestic/sexual violence, including providing safe play areas for children and information and resources for parents about how to help their children following that exposure. Telephone numbers for local domestic violence shelters and national providers, such as the National Domestic Violence Hotline – 1-800-799-SAFE, should be posted visibly in emergency mass care and shelter areas.
• **Homeless Population Support**

People experiencing homelessness\(^{18}\) have limited resources to evacuate, stockpile food, store medications, and shelter-in-place. Messages communicated through mainstream media sources may not reach those who have no permanent residence. Many of these individuals have no access to radio, television, or the internet, and some may be illiterate or non-English-speaking, so written communication may be ineffective with a subset of this population. Some homeless individuals may be reached through radio, but the most common form of communication in this population is word-of-mouth, leading to the spread of inaccurate rumors and misunderstandings that may have serious consequences during an emergency. Many homeless individuals may have difficulties interacting with a mainstream shelter population. In the stressful and (relatively) intimate setting of a disaster shelter, the consequences of such issues may be amplified. Homeless individuals may go to any shelter; however, designated specific shelters that will be staffed by specialists trained to assist homeless persons are recommended.

To communicate disasters to people without homes, homeless service providers should be included in emergency notification systems. Service providers can quickly communicate the emergency to consumers concentrated near their facilities and deploy outreach teams to notify homeless people that are dispersed throughout the community. Outreach teams deployed to make notifications can also transport people to shelters or designated pick-up points for evacuation. Outreach teams employed by homeless service providers are familiar with the homeless community, have established trust and credibility, and are better able to negotiate with people who might resist evacuation efforts. Outreach teams, drivers, and accessible vehicles should be coordinated and assigned to specific designations as soon as possible to prevent delays during a potentially small window of time for evacuation.

Communities are also encouraged to consider the housing needs of homeless people who are displaced after a disaster. Many areas inhabited by people without homes may not be suitable for living after a disaster. Despite the transient nature of homelessness, many homeless people want to return to their communities.

Further information is available through the National Health Care for the Homeless Council [http://www.nhchc.org](http://www.nhchc.org).

• **Tourist Populations**

In some jurisdictions, evacuation of the tourist population occurs prior to the general population. If unable to evacuate these populations prior to an incident, impact-jurisdictions should work to identify this population as non-residents, evacuate them, and advise host-jurisdictions to assist them in coordinating their departure to their home destinations.

---

\(^{18}\) Homeless person: An individual without permanent housing who may live on the streets; stay in a shelter, mission, single room occupancy facility, abandoned building or vehicle; or in any other unstable or non-permanent situation. An individual may be considered to be homeless if that person is ‘doubled up,’ a term that refers to a situation where individuals are unable to maintain their housing situation and are forced to stay with a series of friends and/or extended family members.
Appendix 4: Patient Movement

Introduction

This appendix outlines the response and recovery support activities for the Federal Government before, during, or after a potentially catastrophic incident. This appendix includes elements that are unique to patient movement in support of the Federal Evacuation Support Annex (FESA) to the Response and Recovery Federal Interagency Operational Plans (FIOPs).

Scope

This appendix describes operational activities necessary for the provision of federal patient movement support to SLTT jurisdictions. It outlines objectives, essential tasks, concepts of operations, operational phases, department/agency roles and responsibilities and coordinating structure. It applies to both notice and no-notice domestic incidents.

Terms of Reference

Patients – Includes people under the care of the emergency medical services (EMS) system (e.g., pre-hospital emergency care, community para-medicine/mobile integrated healthcare), inpatient healthcare facilities (e.g., hospital, skilled nursing facility/nursing home, psychiatric facility) and outpatient and home and community-based healthcare services (e.g., home healthcare, dialysis, ambulatory surgery support) prior to, during, or after a disaster.

People with disabilities and others with access and functional needs – Includes people who need access to certain resources (e.g., social services, accommodations, information, transportation or medications to maintain health) and individuals with restrictions or functional limitations that require assistance before, during, or after a disaster. Examples of individuals with access and functional needs include people with disabilities, children, pregnant women, older adults, people with chronic medical conditions, and people with pharmacological dependency.

Personal Assistance Provider – A person who escorts the patient and assists in their activities of daily living until admitted to a destination health services facility.

Critical Considerations

The following critical considerations are supplemental to those outlined in both the FESA and the Response and Recovery FIOPs:

The Public Health Service Act authorizes the U.S. Department of Health and Human Services (HHS) Secretary to lead all federal public health and medical responses to public health emergencies and incidents covered by the National Response Framework (NRF).

The NRF establishes HHS as the Emergency Support Function (ESF) #8 (Public Health and Medical Services) coordinator for medical surge support, including patient movement.
Given appropriate medical and supportive services, evacuees that rely upon outpatient and home and community-based healthcare services will travel with the general population.

If a person requiring acute medical care has a service animal and a personal assistance provider, evacuation planning shall include accommodations for the assistance provider (See Appendix 5, Animal Evacuations, for information on service animals).

DOD is congressionally authorized, funded, equipped, and structured for evacuation of active-duty military patients (approximately 18-60 years of age). However, if resources are available, DOD can evacuate adult National Disaster Medical System (NDMS) patients.

**Essential Tasks**

Essential tasks are those necessary to ensure the successful accomplishment of the Federal Evacuation Support Mission from a patient movement perspective:

1. Coordinate federal medical transportation support (including patient evacuation) between the state and other federal departments and agencies.
2. Activate the NDMS to allow for patient movement, Federal Coordinating Center (FCC) reception, and definitive care in NDMS health service facilities and outpatient and home and community-based healthcare services in the event repatriation is delayed.
3. Convene the ESF #8 National Patient Movement Coordination Team to determine locations for Aerial Ports of Embarkation (APOEs)/Aerial Ports of Debarkation (APODs) and FCCs for patient evacuation and reception.
4. Coordinate federal support for patient movement (e.g., operational coordination of patient evacuations and planning for return of patients following the incident) with SLTT jurisdictions.
5. Assess short-term healthcare and human services needs of patients.
6. Implement a strategy for medical patient repatriation as health service facilities in the affected area return to service.
7. Activate Health and Social Services RSF prior to the return of patients to address healthcare and human service needs.

**Concept of Operations**

As the ESF #8 lead, HHS is responsible for coordinating requests for federal medical surge support including patient movement. The concept of operations for patient movement outlines the operational objectives (with supporting departments and agencies), provides a description of the tiered response to medical surge to a large-scale disaster or incident, and explains key federal roles and responsibilities.

**Operational Objectives (Supporting Departments and Agencies)**

The following federal patient movement operational objectives, coordinated among federal interagency partners, are applicable during both notice and no-notice incidents:

- Situational awareness and information management (HHS, DHS/FEMA, DOD, VA)
Operational coordination of resources (including international support) (HHS, DHS/FEMA, DOD, DOS, and VA)

Assessment of health facilities in the disaster impacted area (HHS, VA)

Patient movement (includes patient evacuation, patient triage, patient tracking, en route treatment, and distribution to medical facilities) (HHS, DHS/FEMA, DOD, VA)

Patient care (includes access to appropriate treatment, access to pharmaceuticals, and Privacy Act of 1974 (5 U.S.C. § 552a) and HIPAA appropriate health information disclosure as applicable to inform or support treatment) (HHS, VA)

Return of patients who were evacuated by the Federal Government to their homes or other appropriate placement (HHS)

Patient access to services (includes assessment of the healthcare services needs of disaster-impacted individuals) (HHS, VA)

**Tiered Response**

An incident response falls under the responsibility of state and local jurisdictions. Lessons learned from catastrophic incidents (e.g., Hurricane Katrina) led to the development of a tiered approach to managing medical and public health response to incidents, representing an integrated framework for emergency management that strengthens federal support to state and local efforts and emphasizes responsibility rather than authority. The tiers of effort can occur simultaneously during a response.

**Tier 1 – Management of Individual Healthcare Assets:** The primary site for point-of-service (i.e., hands-on) medical evaluation and treatment that includes: emergency medical services (e.g., prehospital emergency care, community para-medicine, mobile integrated healthcare), inpatient healthcare facilities (e.g., hospital, skilled nursing facility/nursing home, psychiatric facility, rehabilitation facility, hospice facilities) and outpatient and home and community-based healthcare services (e.g., clinics, home healthcare, dialysis, ambulatory surgery, home hospice, private practitioner offices, community health centers, community behavioral health centers, alternative care sites).

**Tier 2 – Healthcare Coalition Response:** A healthcare coalition (HCC) is a group of individual healthcare and response organizations (e.g., hospitals, EMS, emergency management organizations, public health agencies) in a defined geographic location. HCCs play a critical role in developing healthcare delivery system preparedness and response capabilities. HCCs serve as multi-agency coordinating groups that support and integrate with ESF #8 activities in the context of incident command system (ICS) responsibilities.

**Tier 3 – Jurisdictional Incident Management:** Jurisdiction incident management is the primary site of integration of healthcare organizations with fire/EMS, law enforcement, emergency management, public health, public works, and other traditional response agencies.

**Tier 4 – State Response and Coordination of Intrastate Jurisdictions:** Encompasses all state agencies that are responsible for emergency management, public health and public safety preparedness and response; addresses situations in which the state is considered the lead incident command authority and those in which the state coordinates multi-jurisdictional incident management.
Tier 5 – Interstate Regional Management Coordination: The processes by which states assist one another and coordinate management and response activities during times of crisis; this includes state-level agencies that oversee emergency management, public health, medical, and public safety emergency preparedness and response (e.g., Emergency Management Assistance Compact [EMAC] between states).

Tier 6 – Federal Support to State, Tribal, and Jurisdiction Management: Consists of federal public health and medical assets (e.g., supplies, equipment, facilities, and personnel) organized under ESF #8 of the NRF. One example of Tier 6 support is the activation of the National Emergency Medical Services (NEMS) contract to evacuate patients prior to a disaster. The NEMS contract is subject to a state cost-share laid out in the President’s Stafford Act Declaration.

Key Federal Roles and Responsibilities

Federal support of patient movement must be coordinated closely with SLTT governments. The following departments and agencies play a key role in accomplishing this mission:

Department of Health and Human Services: As the ESF #8 lead, HHS coordinates the activation of the NDMS with DOD, VA, and DHS for the movement of patients. HHS provides direct patient care services to support patient movement for short term care of patients who require treatment of low acuity chronic illness or injuries and may provide stabilizing emergency care. HHS conducts assessments of health service facilities and the medical and public health needs of disaster-impacted individuals and coordinates the return of patients evacuated by federal ESF #8. Upon the patient’s return, HHS coordinates the Health and Social Services Recovery Support Function.

Department of Defense: DOD, upon NDMS Future Planning activation and with Secretary of Defense approval, provides available aero-medical patient evacuation for NDMS patients from Aerial Ports of Embarkation (APOE) to Aerial Ports of Debarkation (APOD) at or in close proximity to Department of Veterans Affairs and/or DOD FCCs, receives NDMS patients at DOD FCCs and coordinates movement for NDMS patients from DOD FCC to destination NDMS civilian health service facilities for definitive care.

Department of Veterans Affairs: VA is responsible for maintaining ESF #8 definitive care capabilities by operating FCCs at designated locations in proximity to VA medical centers. They maintain plans and procedures to stage, receive, transport and track evacuated ESF #8 patients to appropriate NDMS health service facilities to provide continuity of care. VA also coordinates communication procedures and processes to support local patient reception and distribution operations.

Department of Homeland Security/FEMA: FEMA supports ESF #8 and Patient Movement operations through the NEMS contract, which provides federal support to SLTT jurisdictions for medical transportation and medical care in areas affected by a disaster within the continental United States.

Patient Movement Coordination

HHS coordinates the National Patient Movement Coordination Team virtually through a national conference call. State officials, HHS Regional Emergency Coordinators (RECs) in affected areas, along with DHS/FEMA, DOD, and the VA, participate in this call. The call provides for situational awareness of events and developing requirements to support operational coordination of resources among
participants. Additionally, it allows for the dynamic planning and execution of FCC selection, NEMS contract utilization, and APOE selection among other operational issues related to patient movement.

**Emergency Medical Support for Patient Movement Evacuations**

The NEMS contract is activated at the federal (national) level to evacuate patients and medically at-risk populations from an area at significant risk, or to provide pre-hospital care and transport services in a region that has already been affected by a disaster. This contract provides for a maximum deployment for all FEMA NEMS contract zones combined of 1,1200 ground ambulances, 100 air ambulances, enough paratransit vehicles to accommodate 14,000 seats, 600 fixed-location emergency medical technicians (EMTs) and paramedics as fixed site personnel stationed within shelters, airheads, triage centers, or other locations.

FEMA can contract for 24-hour, seven-day a week EMS and ambulance support within the continental United States (see Figure 10: Zone Breakdown for the NEMS Contract).

**Figure 10: Zone Breakdown for the NEMS Contract**

The contract provides the following capabilities within each zone:

- 300 fully staffed and stocked ground ambulances (Advanced Life Support [ALS] and Basic Life Support [BLS])
- 25 air ambulances (fixed- and rotary-wing); equipment and supplies commensurate with mission assignment
- 3,500 para-transit vehicle seats (maximum of 25 percent is wheelchair-capable vehicles)
- 150 medical personnel – EMTs and paramedics stationed within shelters, airheads, triage centers, or other locations, along with supplies for medical and general population shelters
Resources for a one-zone deployment must be deployed from their home station; within 6 hours from the time the contractor receives a task order from FEMA, they will arrive at the designated staging area within 24 hours. This timeline extends as more resources are deployed.
Appendix 5: Animal Evacuation Support

Sixty-five percent of American households have pets, which includes a variety of animal species. In any disaster, jurisdictions should have plans in place for the safe and effective evacuation and sheltering of not just common pets, but all types of animals within the impacted community. The failure to have and communicate such plans creates preventable risks for animals, animal owners and caretakers, the public and first responders. Previous disasters have demonstrated that co-evacuating (and co-sheltering, where possible) people with their animals, including household pets and service/assistance animals increases people’s compliance with evacuation orders, increases survivor resilience, and decreases re-entry to unsafe areas motivated by animal rescue.

Specific authorities, resources, and capabilities associated with animals, including household pets and service and assistance animals, are dispersed across a broad range of response providers, government agencies, and emergency support functions. Animal emergency management is and has always been a whole community effort and the vast majority of resources and capabilities to support animal evacuation operations are non-governmental or private sector.

The Robert T. Stafford Disaster Relief and Emergency Assistance Act, as amended by the Pets Evacuation and Transportation Standards Act and the Post-Katrina Emergency Management Reform Act, establishes in §403 that the “eligible work” for which a state can be reimbursed includes “evacuation, rescue, shelter, and essential needs of household pets and service animals and their owners.” As such, §402 and §502, Direct Federal Assistance, may be interpreted as authorizing FEMA to provide rescue, care, shelter, and essential needs for individuals with household pets and service animals and to the household pets and animals themselves following a major disaster or emergency.

Successful animal evacuation and re-entry will:

- Identify and track animals throughout the process;
- Ensure service animals remain with the individual they serve;
- Safely and humanely evacuate animals out of the impact area;
- Reunify animals with their owners as quickly as possible; and
- Support joint re-entry of owners with their animals.

Authorities

As a rule, the Federal Government has limited, and dispersed authorities related to management of animals in disasters. This document primarily addresses federal capabilities and resources that may be utilized in support of state- and locally led animal evacuation efforts. In addition to the authorities listed below, a more detailed definition of the acts, along with guidance documents, is located in Appendix 8.

---

19 Animals include household pets, service and assistance animals, working dogs, agricultural animals/livestock, wildlife, exotic animals, zoo animals, research animals, and animals housed in shelters, rescue organizations, breeding facilities, and sanctuaries.
Animal Welfare Act
Health Research Extension Act
Marine Mammal Protection Act
Rehabilitation Act
Americans with Disabilities Act
Fair Housing Act
Air Carrier Access Act
Robert T. Stafford Disaster Relief and Emergency Assistance Act

Concept of Operations

The responsibility to safely evacuate animals lies mainly with the owner. Regardless of the type or number of animals, the owner needs to have a plan in place to evacuate and shelter their animals. While most people will likely be able to evacuate with their pets, some of the population will not have the resources or capability to do so. In most cases, local animal control has jurisdictional authority for pets in non-emergency times and, in many cases, will be designated as the local authority for pets during an evacuation or emergency. At the state level, in many cases, the state department of agriculture, the state veterinarian’s office, or board of animal health has been identified as a supporting agency for when local communities are overwhelmed. At the federal level, the overall responsibility for supporting states with animal evacuation rests with the USDA, HHS, and FEMA.

Figure 11: Animal Evacuation Support Conops
Concept of Support

FEMA, with support from USDA and other federal agencies, is responsible for coordinating federal support to help evacuate animals, including household pets and service and assistance animals. ESF #11 facilitates whole community multi-agency coordination with non-governmental organizations to support animal evacuations. Non-governmental organizations (e.g., National Animal Rescue and Sheltering Coalition) and private industry continue to make up the bulk of national resources available to state- and locally led animal evacuation efforts. States, tribes, territories, and municipalities should consider having agreements with these organizations in place prior to an incident and include the organizations in their planning processes and documents.

Operational Considerations for Animal Evacuation Support

Assessment

In preparation for an animal evacuation, an assessment of the animal population requiring evacuation should be conducted by trained personnel to determine transportation, mass care, veterinary, and support requirements as well as to provide recommendations on appropriate courses of action. Animal professionals should be engaged in developing plans, conducting animal needs assessments, and overseeing operations to ensure the safe and humane management of animals. Additional subject matter experts (SMEs) may be required to address specific animal types, populations, or issues (e.g., animals with zoonotic diseases). The assessment should include a review of pre-incident information, including:

- Animals in the community;
- Risks they pose to public health and safety;
- Whether evacuation is possible/feasible and, if not, consideration of shelter-in-place options;
- Whether there is an animal evacuation plan in place, including procedures for animal responder credentialing and intake processing and pre-positioning of animal crates; and
- Once the pre-incident assessment information is reviewed, officials should determine and prioritize species to be evacuated, any unique care requirements, available modes of transportation, and resources needed to support the evacuation (e.g., transport, containment, veterinary, husbandry, and tracking).

Animal Populations

Individual owners may have different types of animals ranging from household pets to exotics and captive wildlife.

In-home animal rescues, collectors, and hoarders may present profound challenges for evacuation, including significant numbers of animals in one household and animals with behavioral or medical challenges. Additionally, many animal owners or caretakers with large numbers of animals in the household are often ill equipped to manage all of their animals during a disaster.

Facilities and organizations may have animals requiring evacuation, including laboratories; zoos, circuses, and animal shows; shelters, rescues, sanctuaries, and rehabilitation facilities; breeding operations; veterinary hospitals; retail stores; and other animal-related businesses such as obedience schools, trainers, groomers, daycares, and boarding kennels. Agencies operating animal shelters, rescue organizations, and
sanctuaries may assist government entities with identifying and reuniting animals with their owners (if applicable) or adopting out unclaimed animals.

Shelter-in-place support – including support for caretakers – should be considered for animals that may be impractical to evacuate (e.g., marine mammals, elephants).

Prohibited animal species and activities may become apparent during an emergency. Jurisdictions should consider and plan for the presence or possible influx of banned species, animals used in illegal activity, or animals transported from other jurisdictions where they may be legal.

Certain industries or the economy may be affected if an incident affects animals with significant genetic, conservation, research, or monetary value (e.g., breeder herds or flocks, endangered species centers, medical research colonies).

**Identification/Tracking/Reunification**

Animals need to be appropriately identified (this will vary by species) to ensure their movements can be tracked to the evacuated location. This will also assist in reunification efforts with the animals’ owners/responsible entities. Disposition planning must be considered for animals that are “unclaimed” or otherwise not reunited with their owners or their owners relinquish during the evacuation or re-entry process. Nongovernmental animal humane groups can often assist with placement of unclaimed or relinquished animals.

**Transportation**

Laws, restrictions, and guidelines concerning animals may need to be reviewed and, if necessary, waived to ensure life safety during the evacuation (e.g., public transportation, facilities prohibiting animals).

Animal transport plans and protocols should be developed to facilitate safe, humane, and lawful animal evacuations. Transporters will need to make accommodations, based on the type of animal being evacuated, and make stops to allow the animals to relieve themselves and move around.

**Animal Containment**

Essential Elements of Information required for animal transport plans include:

Animals, other than service animals for people with disabilities, need to be appropriately caged or contained while awaiting, during, and in a manner that facilitates transport (e.g., hand-carried pet carriers, cages that can be secured inside trucks, livestock pens). It is best practice to assign appropriately trained staff at the point of embarkation to ensure safe and secure containment of animals for transport.

Safety during transport (for people and animals) may require the provision of proper containment equipment for evacuees bringing animals without any supplies.

Appropriately contain or separate certain animal types for which co-location would cause additional stress or dangerous behavior (e.g., fractious, aggressive, or medically compromised animals).

Specialized equipment may be needed to secure laboratory animals, and handle and restrain non-domesticated animals.

Certain animals (e.g., reptiles, birds) require controlled environmental conditions (e.g., temperature, humidity) which must be factored into decisions regarding appropriate containment, transportation, and
temporary holding/sheltering locations. For some species, even brief exposure to excessive heat or cold can be potentially fatal.

**Veterinary Management and Oversight of Evacuation Process**

Animal evacuation operations should be managed by veterinary or animal professionals, with routine monitoring of animals in transit, to ensure humane care of animals and safe arrival at the debarkation site. Crisis action planning and triage operations should address safe evacuation of vulnerable animal populations (e.g., certain animal species, medically compromised, or very young or very old animals).

**Veterinary Care**

Animals, including household pets and service and assistance animals, may require immediate first aid to ensure their continued welfare, and should be provided emergency veterinary care to the greatest extent possible. Veterinary care resources for other animal types and populations should be pre-identified to respond, and may include the following activities:

- Pre-evacuation assessment and triage
- Evacuation monitoring
- Post-evacuation assessment and treatment
- Care for animals during transport, in shelters, or sheltered in place

**Husbandry Support (Feeding/Hydration)**

Feeding and hydration needs may vary significantly depending on the animal species being evacuated. While it may be expected that animal owners have appropriate feeding supplies for their animals, this will not always be the case and plans must be in place to provide animal food and water. Livestock, wildlife, laboratory animals, and exotic species (e.g., zoo animals) often have specific dietary needs that should be planned for in advance and specific to the community’s animal populations, as described in the needs assessment section. It will be necessary to consult with appropriately trained personnel on husbandry requirements.

**Health and Safety**

Jurisdictional as well as crisis action plans should address health and safety risks to both humans and animals:

- Separate animals from people with allergies, phobias, cultural concerns, etc.
- Manage animal care issues including general or stress-induced behavioral issues, injuries, animal bites, and escapes; these may be more common with non-domesticated animals.
- Cure, prevent, or mitigate the worsening or spread of animal illnesses—especially zoonotic diseases that can spread to people.
- Animals left behind may create response issues or endanger the public or first responders (e.g., loose livestock blocking roadways, dangerous animals escaping containment, or owners/rescue teams re-entering unsafe areas to retrieve animals). Prevent or manage biohazards associated with animals.

---

20 Zoonotic diseases are diseases that can spread between animals and humans. Additional information and resources are available at [www.cdc.gov](http://www.cdc.gov).
Resources

**Resource Lead Time:** Resource requirements (e.g., purpose-built transportation, containers, food, medicine, etc.) should be identified early during the Threat and Hazard Identification and Risk Assessment and planning process, in order to be accessible throughout the evacuation process. Consider whether animals (other than service animals) will evacuate/re-enter using the same mode(s) of transportation as the general population or require separate transportation resources.

**Resource Limitation and Prioritization:** In case of resource limitations, jurisdiction and crisis action plans should include guidance for prioritization of certain animal populations and care needs.

**Synchronize Human and Animal Evacuation:** Crisis action planning must consider timing of human and animal evacuations, including factors that may cause delays (e.g., individuals with no or limited personal transportation, patient movement for individuals with pets), and resources required to support both humans and animals until they can be safely reunified.

Evacuation and Sheltering

**Legal Permits and Laws/Rules:** Identify laws regarding the care and movement of animals across jurisdictions involved and obtain permits or implement procedures as required to avoid impeding evacuation. Consider whether reviewing and waiving (as possible and appropriate) any laws and rules that might facilitate the safe and timely evacuation of both humans and animals in the operating environment.

**Sheltering and Rest Stops:** Mass care facilities set up to support evacuation operations should include facilities to manage animal populations in transit.

 Owners and Reunification

**Triage:** Individuals may refuse to evacuate without their animals; evacuation sites may have both humans and animals present. Response leaders must balance safety, priority, and resource allocation requirements of the people and their animals.

**Animals Left Behind:** Those left behind or that escape from shelter-in-place facilities can present health and safety concerns to the public and first responders. As a result, the stabilization and containment of those animals left behind should be given priority and certain exotic species will require trained personnel.

**Identification and Tracking:** A consistent method for identifying and tracking individual animals (e.g., owner wristbands and pet collars with matching identification numbers) is critical for facilitating reunification and avoiding emotional distress and resource drain.

**Reunification:** Ensure the public is aware of what owners should do if separated from their animals during an evacuation, both to facilitate reunification and appropriate disposition of the animals and to minimize owner attempts to reenter unsafe areas to self-locate animals.

**Psychological Trauma:** Studies show that in high stress situations separating owners and their pets can exacerbate stress, causing additional psychological trauma. As a result, individuals and their pets should be kept together whenever possible.

Eligible Expense Reimbursement

FEMA Public Assistance Policy and Program Guide FP-104-009-2, January 2016, provides for reimbursement of certain eligible expenses related to the evacuation of animals (including household pets
and service and assistance animals, research animals, and animals in collections such as zoos and aquariums). This policy may provide reimbursement of certain eligible expenses related to evacuation of animals presenting a clear public safety risk, with a Presidential declaration during Stafford Act incidents. Other federal authorities may support evacuation of specific species of animals during certain emergencies.

**Authorities**

As a rule, the Federal Government has limited, and dispersed authorities related to management of animals in disaster. Although this document primarily addresses federal capabilities and resources that may be utilized in support of state- and local-led animal evacuation efforts, there are certain responsibilities and functions that federal agencies perform under their authorities listed above and noted in the table below.

**Technical Expertise**

Of the federal capabilities and resources that may be utilized in support of state- and local-led animal evacuation efforts, technical experts who can assist not only in the execution phase of an evacuation but in the other phases as well are a key element of support. Most of the agencies represented in this appendix have regional and state-based personnel who are available to assist state- and local-led planning and preparedness activities. Those agencies with relevant technical expertise are depicted in Table 17.

**Deployable Capabilities**

Although non-governmental organizations provide most of the deployable resources to support animal evacuation, certain federal agencies have limited deployable resources to execute their statutory authorities. Examples of federal deployable capabilities include:

- HHS may provide veterinary medical and public health services when requested by authorities from states, localities, tribes and territories, or other federal departments when local resources are limited or inaccessible:
  - The National Veterinary Response Team (NVRT) is the Emergency Support Function (ESF) #8 response asset, managed under the Assistant Secretary for Preparedness and Response (ASPR)/National Disaster Medical System (NDMS). The NVRT provides veterinary medical care to ill or injured federal working animals (i.e., canine and equine), companion animals, and laboratory animals, and public health expertise during a disaster, public health emergency and/or National Security Special Event (NSSE) or other law enforcement mission.
  - U.S. Public Health Service Commissioned Corps Veterinary Officers provide deployable public health and clinical medical services, including food safety and laboratory animal expertise. They have the ability to provide epidemiological expertise to prevent and respond to disease outbreaks among animal and human populations.
  - DOC, DOI, and USDA (when mission assigned) have deployable wildlife personnel.
  - DOD Army Veterinary Service provides clinical veterinary support for federal working animals. The Army Vet Service may provide clinical veterinary treatment for civilian-owned animals; however, Governor's licensure waivers must be obtained for DOD veterinarians that are not licensed in the State/territory where the treatment will occur, and before the medical treatment begins. Assist in zoonotic disease control, veterinary public health, and food protection/food safety to protect human health.
Table 21 provides an overview of federal agencies with key authorities, technical expertise, and limited deployable capabilities. Authorities generally do not facilitate evacuation but may place requirements or limit evacuation options.

A = Authorities, TE = Technical Expertise, DC = Deployable Capabilities

*Notes:*
- FEMA has authorities under the Stafford Act and deployable capabilities for animals other than household pets, service and assistance animals, and working dogs, to protect public health and safety, as appropriate.
- USDA has Federal authorities that may place requirements on transport, or potentially limit movement, of certain animals designated for evacuation.
- DOI authorities apply only within National Park Service units.
Appendix 6: Emergency Repatriation

The U.S. Department of Health and Human Services (HHS) leads the federal coordination, notification, deployment, and delivery of emergency repatriation services under the U.S. Repatriation Program. These services assist private U.S. citizens, their dependents, and other U.S. Department of State (DOS) authorized persons once they have arrived in the United States, as a result of, coordinated evacuations or repatriations from foreign countries.

This appendix provides an overview of relevant information contained in the National Emergency Repatriation Plan (NERP). For additional detail, reference the latest NERP, which defines federal emergency repatriation roles and responsibilities, planning considerations, and establishes procedures for implementation of federal U.S. Repatriation Program emergency operations in the continental United States.

Scope

This appendix describes federal and state roles and responsibilities and coordination in support of the HHS Administration for Children and Families (ACF) Repatriation Program, during an emergency repatriation. It applies to both notice and no-notice domestic incidents. Depending on incident size and scope, HHS would require more robust help from the interagency to complete the mission.

Key Federal and State Roles and Responsibilities

Successful emergency repatriation operations require coordination and support from across the Federal Government and include non-governmental partners. Agencies that are part of the emergency repatriation response have been categorized as Lead, Coordinating, Primary, or Supporting. They support the planning and capacity building efforts and provide a coordination structure for emergency repatriation operations.

Depending on the specific needs of an emergency repatriation operation, some response agencies may have a larger role in some operations than they will in others. For example, an evacuation triggered by a natural disaster or war may not involve the same agencies required to support a repatriation or evacuation from an environment with potential exposure to a contagious condition.

Domestic Lead Agency

Department of Health and Human Services (HHS) – The Administration for Children and Families (ACF) retains overall responsibility for the U.S. Repatriation Program, while working with ASPR in managing and overseeing the emergency response activities.

Primary Agencies

Department of State (DOS) serves as the lead federal agency in the evacuation and repatriation of official U.S. personnel and their dependents that are under Chief of Mission authority and private U.S. citizens overseas. DOS’ lead role also includes overseas evacuations and repatriations from environments with potential high-risk exposure to certain infectious diseases. DOS also oversees and convenes the Washington Liaison Group meetings (WLG). DOS determines who will be evacuated from overseas to
the United States and ensures necessary immigration documents are provided to all evacuees prior to their evacuation.

Department of Homeland Security (DHS)/Customs and Border Protection (CBP) ensures and processes proper legal entrance through the U.S. Points of Entries (POE)s, coordinates application of domestic immigration policy, coordinates the implementation of DHS senior leadership guidance into repatriation planning of the DHS components; and participates in the National Joint Information Center established by the HHS SOC Public Information Officer. DHS/Citizen Immigration Services, DHS/FEMA, and the Office of Health Affairs may also play a supporting role in emergency repatriation.

**Supporting Agencies**

Corporation for National and Community Services (CNCS) provides service in the temporary care and processing of evacuees as requested by HHS and/or the state in accordance with the Memorandum of Understanding between ACF and the ARC.

Department of Defense (DOD), upon Secretary of Defense approval of a request for assistance from Department of State, may provide, through the appropriate combatant commanders, military assistance for the protection, evacuation, and repatriation of designated personnel to the United States or overseas safe haven, and may further provide support at U.S. designated military bases or other designated POEs during NERP activation.21

Department of Housing and Urban Development (HUD) is responsible for identifying available HUD assisted housing at or near the POE. It also helps to identify available HUD-assisted housing at a point of entry for longer stays, commercial housing facilities, and congregate facilities.

Department of Justice (DOJ) per Section 1113 of the Social Security Act, DOJ provides consultative assistance to the U.S. Repatriation Program.

Department of Transportation (DOT) In support of an emergency repatriation, the DOT, through its operating administrations will coordinate to resolve domestic transportation issues and, specifically through the Federal Aviation Administration (FAA), take operational action to provide Air Traffic Management (ATM) support to participating flights, as requested. General Services Administration (GSA) provides broad scope of support services (e.g., building space, contractual services) to requesting agencies on a reimbursable basis.

USDA APHIS and HHS CDC have certain regulatory authorities over importation of pets (and other animals). APHIS and CDC work collaboratively with CBP to ensure import requirements are met or waivers are allowed, as warranted, during emergency evacuation and repatriation.

---

21 The National Guard Bureau is the channel of communication and assists in five broad categories of operational issues: pre-crisis preparation and preplanned responses; communications, information sharing and fusion; response strategies; coordination mechanisms; and continuity of operations plans/business continuity in support of the Evacuations at the state and federal levels. This is usually executed through the Dual Status Commander (DSC) enabling Unity of Effort.
States

All U.S. states and most territories serve as main repatriation supporting entities. States must develop State Emergency Repatriation Plans (SERPs) to ensure proper establishment of an Emergency Relocation Center (ERC) at approved HHS locations, and under unusual circumstances at/near U.S. borders and seaports) to deliver services to those evacuated during an emergency repatriation. Each state governor has designated a state agency responsible for assisting HHS in managing the emergency and non-emergency activities of the Program.

Federal Coordinating Entities

Federal operations during an emergency repatriation activity rely on a tiered incident management structure. At the national level, HHS will activate the HHS SOC to coordinate with federal partners.

National Federal Interagency Emergency Repatriation Workgroup (FIER) is a standing, preparedness phase planning and policy group that includes representatives from federal agencies with responsibilities as described in the NERP. The FIER serves as an interagency forum for consultation and for development and coordination of applicable incident management activities. The FIER is led by HHS to conduct preparedness activities, including capacity building, policy formulation, and coordination to improve readiness for future emergency repatriation events.

Washington Liaison Group (WLG) is a DOS-led group that includes designated representatives from key federal agencies, including HHS, DOD, and DHS/CBP. The WLG provides a platform for federal agencies to discuss country-specific situations, DOS decisions of authorized and/or ordered departures for official U.S. personnel, and potential evacuations, among other relevant policy issues.

HHS SOC Command and General Staff elements provides national level emergency incident support throughout the continuum of HHS operations with strategic and operational planning, strategic and operational oversight, and logistical support for all deployed Federal public health, medical, human/social services, and disaster recovery resources. The HHS SOC is the coordinating element between headquarters/support elements and the field elements of the Incident Management Team and the Federal Health Coordinating Official (FHCO).

Repatriation Program Implementation Phases

This is an integrated framework for emergency repatriation management, which strengthens federal support to state and local efforts and emphasizes responsibility rather than authority. The Tiers do not operate in a vacuum and can occur simultaneously during a response.

Preparedness – Engages federal and state agencies in National Emergency Repatriation response planning to determine existing logistics and resource capabilities, develop deliberate plans and procedures, and conduct training and exercises to validate existing plans. This tier consists of three sub-phases that range from steady-state operations to the positioning of resources prior to the occurrence of an incident. Actions taken during Phase 1 are focused on awareness, preparedness, mitigation, and protection. During a notice incident, there may be an elevated threat (Phase 1b) and credible threat (Phase 1c) for which response actions must be taken and will be detailed in incident-specific annexes, as warranted.
Response - Consists of the immediate response, deployment of resources and personnel, and sustained response operations.

Recovery - Refers to activities that occur as a part of the response mission area to facilitate the transition and support to recovery. Phase 3a includes short-term recovery operations (e.g., transitional closing of an Emergency Repatriation Center [ERC]) and transition to steady-state operations. In many emergency repatriation operations, a clear transition from one phase to the next may not be evident and some phases may run concurrently.

Emergency Repatriation Coordination

HHS manages the U.S. response during DOS evacuations or repatriations of 500 or more private U.S. citizens, their dependents, and other DOS authorized persons from overseas to the continental United States. During emergency repatriations, states selected as a Port of Entry (POE) will be asked to activate their SERPs.

The type of response and the federal and non-federal partners’ involvement during an operation is primarily dependent on the type of evacuation, number of evacuees, and state’s support at the POE. The participation of agencies involved in a repatriation response may also be determined by the nature of the threat (e.g., communicable disease outbreak or Chemical, Biological, Radiological, or Nuclear [CBRN] incident).

During an emergency repatriation, for DOS chartered commercial transportation, HHS-identified main airports will serve as the main recommendation options.

Two main types of facilities may be utilized as POEs during an emergency:

Commercial Facilities (e.g., international airport): Based on current on-going planning efforts amongst HHS and DOD, use of this type of facility is the primary option for the operation of DOS chartered commercial aircraft and potentially DOD arranged aircraft. In support of HHS, the state will be responsible for the establishment of an ERC and necessary coordination for the reception, temporary care, and onward movement of noncombatant evacuees. If the ERC cannot be established at an international airport and/or a private or public location, then the HHS can submit a request for assistance to another federal agency on behalf of the state for the use of that federal facility.

- Federal Installations (e.g., military base): If the situation requires use of a federal facility, HHS will request the use of the facility and any incidental support from the facility’s owning federal department/agency. Through the state as its agent, HHS will coordinate the reception, temporary assistance, and onward movement of noncombatant evacuees and repatriates at the federal facility.

Depending on the type of event, the United States might be operating both types of facilities simultaneously in the same state.
Concept of Operations

Emergency repatriation activities are a combined federal and state operation. Due to the volume of actions associated with emergency repatriations, SERPs are to identify all potential resources necessary for proper coordination, implementation and management of an ERC. Evacuations may take place under a Presidential declaration of national emergency due to escalating international tension or the outbreak of hostilities overseas or they may occur under conditions not involving a Presidential declaration of national emergency.

**Evacuations under a Declaration of National Emergency:** If the situation is sufficiently serious as to warrant a declaration of national emergency, it is anticipated that a very large number of U.S. citizens would be returned to the United States. These evacuees may be returned to the United States from overseas safe havens to which they were transported as international tensions increased or directly to the United States. Movement of all evacuees may take place over a longer period of time and may include HHS national coordination at commercial and federal facilities (e.g., military base).

**Evacuations Not Involving a Declaration of National Emergency:**

This is the most common situation and all recent emergency evacuations have been conducted under this scenario. An emergency may arise in a foreign country that will require the immediate evacuation of U.S. citizens and their dependents, regardless of whether the Host government has declared a national emergency. Upon DOS decision to evacuate or repatriate private U.S. citizens, HHS/ACF has the same responsibilities listed under a Presidential declaration of national emergency.

Coronavirus 2019 Novel Coronavirus (2019-nCoV)

The U.S. State Department ordered personnel from the US Consulate General in Wuhan, China to depart for the US on a chartered flight Wednesday, January 29, 2020. Nearly 200 US citizens were housed and quarantined for 14 days at March Air Reserve Bay near Riverside, CA. The DOS chartered several more flights to evacuate American citizens from the Hubei province to other locations. The Hubei province includes Wuhan, the city where the epidemic began.

Evacuations are arranged by DOS through joint agreements with commercial carriers and/or Secretary of Defense. After arrival at POE locations in the US, all evacuees are processed by the DHS/CBP for lawful entry. Other required clearances are performed by authorized federal agencies, such as the CDC. These federal agencies work with the established National Emergency Response (NER) Unified Coordination Group (UCG) and states as needed. After evacuees are cleared to enter the US, states, on behalf of HHS/ACF, are responsible for proper and timely implementation of the SERP, with the main goal of providing needed reception and temporary services to evacuees.

Contact HHS for the latest NERP, which defines federal emergency repatriation roles and responsibilities, planning considerations, and establishes procedures for implementation of federal U.S. Repatriation Program emergency operations in the continental U.S.

Coronavirus Public Health Emergency Declaration:

“As a result of confirmed cases of 2019 Novel Coronavirus (2019-nCoV), on this date and after consultation with public health officials as necessary, I, Alex M. Azar II, Secretary of Health and Human Services, pursuant to the authority vested in me under section 319 of the Public Health Service Act, do hereby determine that a public health emergency exists and has existed since January 27, 2020, nationwide”.

Public Health Emergency International Concern (PHEIC)

The World Health Organization on January 30, 2020 declared the outbreak of a novel coronavirus a global health emergency, an acknowledgement of the risk the virus poses to countries beyond its origin in China and of the need for a more coordinated international response to the outbreak.

Figure 14: DOS evacuates US citizens from Hubei province to other locations within the US.
Appendix 7: Re-entry / Re-occupancy / Relocation Support

The ability to conduct swift and efficient re-entry and re-occupancy operations will directly influence the ability of impacted jurisdictions, host communities, and displaced evacuee re-entry operations to manage or limit access to incident affected areas. In many cases, depending on the scope of the physical damages to the impacted area, evacuees are able to return to their homes, businesses, and facilities. However, the absence of services (e.g., lifeline infrastructure, healthcare, schools) within the impacted jurisdictions and/or presence of hazards (e.g., contamination, debris) may preclude certain populations from returning to their pre-disaster residences. While re-entry and re-occupancy operations are the responsibility of state and local authorities, federal support may be provided under certain circumstances. Under the Stafford Act, the President may provide transportation assistance to relocate displaced individuals.

The President may provide transportation assistance to relocate individuals displaced from their pre-disaster primary residences as a result of an incident declared under this Act or otherwise transported from their pre-disaster primary residences under section 5170b(a)(3) or 5192 of this title [Sections 403(a)(3) or 502], to and from alternative locations for short or long-term accommodation or to return an individual or household to their pre-disaster primary residence or alternative location, as determined necessary by the President. – Stafford Act

Re-entry operations, in damaged areas, may involve the structured, phased, and/or limited access to their property to check on or maintain property and or critical infrastructure owners/operators to perform restoration functions (e.g., daytime only access). A Phased Re-entry operation refers to the process of granting access to an incident site and other restricted areas by aligning response and recovery personnel and other affected stakeholders (e.g., local business owners, utility operators, community members) into functional groupings, and managing re-entry via defined access levels (sometimes referred to as “tiers”).

Concept Approach to Re-entry by Phase

Marked by the coordinated movement of first responders and evacuees back into a community once the threat or hazard dissipates and the event causing evacuation ends. Re-entry typically marks the transition to recovery activities.
Table 22: Concept Approach to Re-entry, by Phase

</tr>
</tbody>
</table>

Federal Re-entry and Re-occupancy Support Timelines

Re-entry and re-occupancy timelines will be dictated by incident-specific factors as well as decisions made by state and local authorities, making it difficult to determine precisely when re-entry and re-occupancy operations will take place. However, understanding that re-entry and re-occupancy operations correlate with the movement of evacuees out of sheltering and temporary housing options, it is prudent to synchronize federal re-entry and re-occupancy support with the timelines for sheltering, temporary housing, and sustainable housing as outlined by the Catastrophic Sheltering and Temporary Housing Concept of Operations. The synchronization of federal re-entry and re-occupancy support with sheltering and housing operations will allow decision-makers at all levels of government to anticipate the timelines for when federal support may be provided rather than relying on decisions rendered through crisis action planning.

When to Initiate Federal Support

In the aftermath of an incident, re-entry and re-occupancy operations may be initiated almost immediately—especially for jurisdictions that may have been minimally impacted by the incident.

---

Federal re-entry and re-occupancy support may be made available as soon as survivors are permitted to return to their pre-disaster residences or are directed to seek alternative long-term housing options.

While the initiation of re-entry and re-occupancy operations by state and local authorities alone should not be a sufficient condition to warrant federal support, it should be a necessary condition to be considered alongside a pre-determined trigger.

Under certain circumstances, it may be possible for federal re-entry/re-occupancy support to be provided when an incident does not materialize. For example, jurisdictions that have issued preemptive evacuation orders may be able to reenter the evacuated area when the threat/hazard dissipates.

The synchronization of federal re-entry/re-occupancy support may be provided in both pre- and post-incident environments.

In general, short-term and intermediate recovery will focus on supporting congregate and non-congregate sheltering and temporary housing respectively—operations that inherently provide temporary support—until survivors can either return to their pre-disaster residences or permanently relocate to alternative sustainable housing options.

In contrast, long-term recovery efforts primarily provide permanent housing solutions to survivors who are unable to return to their pre-disaster residences.
Cost-Benefit Analysis

The conduct of swift and efficient re-entry, re-occupancy, and relocation operations directly correlate with the rate at which communities and survivors can recover from an incident, therefore the fundamental purpose of requesting federal re-entry, and re-occupancy support is to expedite recovery operations. Though the process of re-entry/re-occupancy may be expedited with federal support, the added recovery benefits may be nullified by the additional costs associated with employing federal assets. Decision-makers must determine at what point the marginal utility gained from expedited re-entry/relocation operations justifies the additional costs associated with the employment of federal assets. For example, in some instances it may be more sensible for state and local assets to take multiple trips to transport evacuees rather than requesting federal support.

A slow rate of re-entry and re-occupancy, as well as community restoration, encourages community deterioration. Decision-makers must ensure that the rate of re-entry and re-occupancy is sufficient to offset dilatory forces. Unfortunately, there is currently no metric that accurately reflects the needed rate in the aftermath of an incident. The resiliency of a particular community is influenced by a myriad of factors (e.g., community preparedness), which will need to be assessed at the time of the incident. As a result, it may be difficult to consistently assess when and how much federal support is required in order to mitigate the impacts resulting from delayed re-entry and/or re-occupancy operations.

Cost-benefit Analysis Factors

Costs associated with continued evacuation/sheltering operations (e.g., loss of tax base, increased burden on host-communities).

Hazardous conditions within the impacted jurisdiction (e.g., inaccessibility due to flooding, infrastructure damage, interrupted utilities, absence of lifesaving, life-sustaining, and community restoration services/resources).

Status of infrastructure within the impacted jurisdiction to support schools, healthcare services, social services, and basic societal functions (e.g., primary health care, childcare, grocery stores, banks, dialysis centers).

Identification and availability of transportation resource, including accessible record.

Considerations for Re-entry

<table>
<thead>
<tr>
<th>Considerations for Re-entry</th>
</tr>
</thead>
<tbody>
<tr>
<td>After an incident, the safety of returning evacuees must be the top priority for state and local officials regardless of the costs associated with continued evacuation and sheltering operations.</td>
</tr>
<tr>
<td>After an incident, the safety of returning evacuees must be the top priority for state and local officials regardless of the costs associated with continued evacuation and sheltering operations.</td>
</tr>
<tr>
<td>State and local officials must plan for coordinated re-entry operations, which will enable the process of safely returning evacuees to their place of residence, business, or facility in order to facilitate the recovery process.</td>
</tr>
</tbody>
</table>
Failure to adequately address safety and health issues during the process of re-entry may place added burden on affected communities and increase risks of illnesses and injuries, accidental deaths, and costs associated with continued evacuation and sheltering operations.

Re-entry operations may be time-phased by geographic area (e.g., by county/parish) or risk-based (e.g., permit full re-entry once major risks are mitigated).

To ensure that government-assisted evacuees receive appropriate support services (including those related to the tracking, transportation, and reunification of evacuees with their families, animals, and belongings); a tracking system, or mechanism to share data among tracking systems, must be put in place, as early as possible.

Many evacuees will be able to return to the impact jurisdiction using the same resources used to originally evacuate, but other evacuees may require support to return.

Evacuees may require respite care and life sustaining supplies during re-entry operations, which could include resting areas, food and hydration, medical care and consumable medical supplies, with identical support for their animals, including household pets and service and assistance animals.

Re-entry to a disaster-impacted jurisdiction may be allowed by authorities for local residents to assess damage to their homes, retrieve personal belongings, or secure their property. However, some residences may be found to be not suitable for re-occupancy because of damage, structural or safety concerns. As a result, these evacuees may have to stay in temporary shelters longer or permanently relocate to alternate housing.

Various factors (e.g., financial resources, community infrastructure) will determine whether evacuees choose to return once re-entry is permitted.

Individuals without a fixed residence may require health and social services support to facilitate re-entry to their jurisdiction of origin.

In some instances, re-entry to an impacted jurisdiction may not be possible, which will require some or all evacuees to permanently relocate.

Various factors (e.g., financial resources, community infrastructure) will determine whether evacuees choose to return once re-entry is permitted. Approximately 17 percent (255,000) of the total Hurricane Katrina evacuation population did not return to Louisiana and relocated to another state. Hurricane Maria re-entry/relocation numbers are unknown at this time for Puerto Rico evacuees.

### Relocation Assistance

Recognizing that evacuees in temporary sheltering and temporary housing will need to return to their pre-disaster residences or move into alternative permanent housing solutions, provisions for both re-entry, and re-occupancy support should be available. However, once temporary sheltering and temporary housing operations conclude (i.e., short-term and intermediate recovery), the posture of federal support is no longer directed at returning evacuees to their pre-disaster residences. Instead, federal support will exclusively be directed towards the relocation of survivors from sheltering and temporary housing into permanent housing solutions.
Alternate Solutions

Stafford Act Disasters resulting from hurricanes, flooding, and most recently wildland fires in CA have had a severe impact on housing resources particularly in areas that had limited stock of rental/housing to begin with. As a result, FEMA and affected SLTT, are exploring innovative alternative housing options. A sample of alternative housing options include:

- Purchasing RV units from previous DR contracts to offset contracting timeline for purchase.
- Adding language to contracts allowing for transfer of assets to other DRs.
- Proposing grants through recent amendments to Section 408 of the Stafford Act to provide for innovative housing units such as tiny homes and log cabins for pre-disaster renters as affordable permanent housing.
- Utilizing resilience activities under Section 428 of the Stafford Act.

Figure 16: Relocation and Permanent Housing Support Synchronization

Permanent Solutions

Legal conditions for Permanent Housing Construction are found in Section 408(c)(4) of the Stafford Act. Specific conditions:

- FEMA to provide facts that demonstrate that no alternative housing resources are available; and
- Temporary Housing Assistance (including Direct Temporary Housing Assistance is unavailable, infeasible, or not cost effective.

For additional information on Long-Term Housing requirements, refer to the National Risk and Capability Assessment National Capability Targets, National Risk and Capability Assessment February 3, 2020
Appendix 8: Authorities and Guidance

The authorities applicable to this annex are consistent with those outlined within the Response and Recovery Federal Interagency Operational Plans (FIOPs). Nothing in this annex alters or impedes the ability of federal agencies to carry out their respective authorities and associated responsibilities under law. This annex does not create new authorities nor change existing ones.

To avoid delay, federal agencies may take appropriate independent emergency actions within the limits of their statutory authority to protect the public, mitigate immediate hazards, and gather information concerning the emergency. Authorities specifically applicable to this annex include those in the following tables.

Table 24: Statutory and Regulatory Evacuation Authorities

<table>
<thead>
<tr>
<th>Title</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Federal Evacuation Assistance – 42 U.S.C. § 5192</td>
<td>Authorizes the President to: Direct any federal agency, with or without reimbursement, to utilize its authorities and the resources granted to it under federal law (including personnel, equipment, supplies, facilities, and managerial, technical, and advisory services) in support of state and local emergency assistance efforts to save lives, protect property and public health and safety, and lessen or avert the threat of a catastrophe, including precautionary evacuations. Coordinate all precautionary evacuation-related disaster relief assistance (including voluntary assistance) provided by federal agencies, private organizations, and state and local governments.</td>
</tr>
<tr>
<td>FEMA’s Role in Evacuations – 6 U.S.C. § 314 (a) (9) (C)</td>
<td>States that FEMA will lead and support the Nation in a risk-based, comprehensive emergency management system of response, by conducting emergency operations to save lives and property through positioning emergency equipment, personnel, and supplies, through evacuating potential victims, through providing food, water, shelter, and medical care to those in need, and through restoring critical public services. FEMA will also reimburse eligible evacuation expenses through the Public Assistance Program, per FP 104-009-2, Public Assistance Program and Policy Guide, January 2018. Specific policies include Chapter 2. V.H. – Cost Eligibility, Mutual Aid; Chapter 2.V.L. – Cost Eligibility, Donated Resources; and Chapter 2. VI.B.10. –Emergency Work Eligibility, Evacuation, and Sheltering.</td>
</tr>
<tr>
<td>Host-State Evacuation and Sheltering 42 U.S.C. §§5191-5193, as amended, and implementing regulations at 44 CFR Part 206, Subparts B, G and H.</td>
<td>Establishes the procedures for reimbursing host-States for the cost of evacuation and sheltering support that they provide to impact-States when requested to provide such support by the impact-State or FEMA.</td>
</tr>
<tr>
<td>Animal Evacuations – 42 U.S.C. § 5170b</td>
<td>Authorizes federal support for the rescue, care, shelter, and essential needs for household pets and service animals once a federal disaster declaration has been made.</td>
</tr>
<tr>
<td>Title</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Disability Integration During Evacuation – 6 U.S.C. § 321b</strong></td>
<td>FEMA, through its statutorily required Disability Coordinator, is responsible for ensuring the coordination and dissemination of best practices and model evacuation plans for individuals with disabilities. The Disability Coordinator promotes the accessibility of telephone hotlines and websites regarding emergency preparedness, evacuations, and disaster relief and ensures the availability of accessible transportation options for individuals with disabilities in the event of an evacuation. The Disability Coordinator provides guidance and implements policies to ensure that the rights and wishes of individuals with disabilities regarding post-evacuation residency and relocation are respected.</td>
</tr>
<tr>
<td><strong>Inclusion of Evacuation as Catastrophic Incident – 6 U.S.C. § 701(4)</strong></td>
<td>Expands the definition of “catastrophic incident” to include mass evacuations.</td>
</tr>
<tr>
<td><strong>Information-Sharing with Law Enforcement Agencies – 6 U.S.C. § 727</strong></td>
<td>Permits the FEMA Administrator, in the event of an evacuation, sheltering, or mass relocation, to disclose information in any individual assistance database to any law enforcement agency in order to identify illegal conduct or address public safety or security issues, including compliance with sex offender notification laws.</td>
</tr>
<tr>
<td><strong>Evacuation of U.S. Citizens Abroad</strong></td>
<td>Per Executive Order 12656, the U.S. Department of State (DOS) is responsible for the “protection or evacuation of United States citizens and nationals abroad and safeguarding their property abroad, in consultation with the Secretaries of Defense and Health and Human Services.”</td>
</tr>
<tr>
<td><strong>Evacuation of Foreign Nationals</strong></td>
<td>Each foreign consulate/mission within the U.S. is responsible for repatriation services for its own citizens while they are in the U.S. The DOS role in supporting the evacuation of foreign nationals is limited to: Serving as a liaison between the consulate/mission and the state or local government if a foreign consulate/mission is unable to connect with an impacted jurisdiction; and Ensuring foreign dignitaries continue to receive the privileges and protections outlined in the Vienna Convention on Diplomatic Relations of 1961.</td>
</tr>
<tr>
<td><strong>Surrender of Firearms – 42 U.S.C. § 5207 Limitation</strong></td>
<td>Nothing in this section shall be construed to prohibit any person in subsection (a) from requiring the temporary surrender of a firearm as a condition for entry into any mode of transportation used for rescue or evacuation during a major disaster or emergency, provided that such temporarily surrendered firearm is returned at the completion of such rescue or evacuation.</td>
</tr>
<tr>
<td><strong>Public Health Service Act</strong></td>
<td>Authorizes the U.S. Department of Health and Human Services (HHS) Secretary to lead all federal public health and medical responses to public health emergencies and incidents covered by the National Response Framework.</td>
</tr>
<tr>
<td><strong>DOD</strong></td>
<td>Is congressionally authorized, funded, equipped and structured for evacuation of active duty military patients, (approximately 18-60 years of and age).</td>
</tr>
<tr>
<td><strong>Americans with Disabilities Act</strong></td>
<td>As amended, addresses civil rights in public accommodation in public places such as businesses, restaurants, buses, etc.</td>
</tr>
<tr>
<td><strong>National Response Framework (NRF)</strong></td>
<td>National Response Framework establishes HHS as the Emergency Support Function ESF #8 Public Health and Medical Services coordinator for medical surge support including patient movement.</td>
</tr>
</tbody>
</table>
As amended by the Pets Evacuation and Transportation Standards Act and the Post-Katrina Emergency Management Reform Act, establishes in §403 that the “eligible work” for which a state can be reimbursed includes “evacuation, rescue, shelter, and essential needs of household pets and service animals and their owners.” As such, §502, Direct Federal Assistance, may be interpreted as authorizing FEMA to provide rescue, care, shelter, and essential needs for individuals with household pets and service animals, and to the household pets and animals themselves following a major disaster or emergency.

As amended, authorizes the Secretary of Agriculture to restrict the importation, entry, or further movement of animals for reasons of livestock pest or disease control, or humane treatment, as well as related activities, including quarantine.

As amended, and associated regulations, require that federally established standards of care and treatment be provided for certain warm-blooded animals bred for commercial sale, used in research, transported commercially, or exhibited to the public.

Requires all federal grantee institutions to have disaster plans that address both the well-being of animals and personnel during unexpected events that compromise ongoing animal evacuation.

As amended, establishes procedures, practices, and guidance for rescuing and rehabilitating stranded marine mammals. Contingency plans for rehabilitation hospitals must include evacuation or sheltering in place for emergency events.

As amended, requires provisions for reasonable accommodations and modifications to housing policies (e.g., no pet fees, pet deposits, or pet rent) for animals that serve individuals with disabilities including in the aftermath of disasters.

As amended, requires carriers to permit service animals to accompany passengers with a disability (with some caveats for “unusual or exotic” service animals), addresses emotional support and psychiatric service animal transport in aircraft cabins, and provides guidance on carrying service animals.

--- | ---
national defense includes emergency preparedness activities, including most homeland security programs. Emergency preparedness activities, a component of national defense, includes measures designed or undertaken to: Prepare for or minimize the effects of a hazard upon the civilian population; Deal with the immediate emergency conditions that are created by the hazard; and Effect emergency repairs to, or the emergency restoration of, vital utilities and facilities destroyed or damaged by the hazard. The Priorities Authority can be used in procurement contracts for resources and services. This authority puts the government at the head of the line over other competitors for both resources and services needed to respond to incidents such as mass evacuations. Implemented through issuance of procurement contracts to the private sector, this authority could be used during a mass evacuation event for activities including lodging for survivors and responders, fuel and related transportation services, and general support for mass care operations.
### Appendix 9: Execution Tasks

The following table documents all execution tasks related to federal evacuation support detailed in the 2016 Response and Recovery Federal Interagency Operational Plans (FIOPs). No new tasks have been developed during the Federal Evacuation Support Annex (FESA) planning process, as the annex is not threat/hazard-based. Future development or revision of incident-specific annexes to the Response and Recovery FIOPs should include new and/or validate existing evacuation tasks based on incident-specific planning factors.

#### Table 26: Execution Checklist

<table>
<thead>
<tr>
<th>Emergency Support Function</th>
<th>Agency</th>
<th>Task</th>
</tr>
</thead>
<tbody>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Provide transportation technical assistance and analysis for accessible evacuation operations and evacuation route conditions.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Facilitate coordination between SLTT and federal responders regarding the impact of outflow of persons and traffic on the entry of response teams and supplies into the affected area.</td>
</tr>
<tr>
<td>#1</td>
<td>USCG</td>
<td>Coordinate evacuations across bodies of water and coordinate the disposition of those assisted by search and rescue teams to appropriate evacuation locations.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>In conjunction with FEMA, coordinate evacuation routes with SLTT agencies and determining the status of transportation infrastructure to be used for evacuation.</td>
</tr>
<tr>
<td>#1</td>
<td>TSA</td>
<td>Assist federal, SLTT planners to assess and validate multimodal transportation security needs for mass evacuation.</td>
</tr>
<tr>
<td>#1</td>
<td>TSA</td>
<td>Assist airport operators in the development of airport security plans; provide regulatory oversight; and coordinates federal aviation security activities.</td>
</tr>
<tr>
<td>#1</td>
<td>TSA</td>
<td>Notify airport operators and transportation stakeholders of threats to the transportation sector.</td>
</tr>
<tr>
<td>#1</td>
<td>TSA</td>
<td>Provide mass evacuation transportation security and law enforcement technical assistance and resources to federal and SLTT mass evacuation planners, airports, and transportation providers consistent with and to ensure compliance with federal transportation security guidelines and directives.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Coordinate with airlines and airports to determine when air operations are likely to be suspended and prioritizing which airports are critical for evacuations, ensuring these airports are operational for as long as possible (applies only to functions for which DOT is responsible).</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Monitor and report damage to the transportation system and infrastructure.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Issue applicable regulatory waivers.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Provide air navigation services (e.g., air traffic control, flow management, temporary flight restrictions) needed to enable evacuation and other response air operations.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Monitor ground, air traffic, and determine potential evacuation routes.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Assist in the development of evacuation plans for major metropolitan areas, in conjunction with the local jurisdictions.</td>
</tr>
<tr>
<td>Emergency Support Function</td>
<td>Agency</td>
<td>Task</td>
</tr>
<tr>
<td>----------------------------</td>
<td>--------</td>
<td>------</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Dispatch staff to the NRCC, RRCC(s), JFO(s), and Evacuation Liaison Team.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Coordinate with ESFs #5, #6, #8,11 and SLTT governments; the private sector; and voluntary organizations to identify and deploy capabilities to transport identified populations.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Activate the Evacuation Liaison Team to support coordination with SLTT governments and nonprofit and private sector participants.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Provide transportation coordination and analysis for evacuation operations and evacuation route conditions.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Coordinate with DHS to initiate emergency permit and waiver requests to facilitate evacuation, including: (1) Temporary relief from specific safety regulations to allow direct response or relief transportation services to continue to a declared disaster or emergency from the Federal Motor Carrier Safety Administration; (2) Truck size and weight limit permits from state Departments of Transportation; (3) Jones Act waivers from DHS; and (4) Fuel quality waivers from EPA.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Identify evacuation shortfalls and outstanding transportation needs.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Coordinate with federal departments and agencies to determine evacuation support requirements.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Inventory and make available cargo and passenger aviation assets and report availability to the Movement Coordination Center (MCC) in the NRCC to read inventory and report availability to the MCC.</td>
</tr>
<tr>
<td>#1</td>
<td>TSA</td>
<td>Deploy federal Air Marshals Transportation Security Advanced Team to affected airports.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Support SLTT governments in evaluating evacuee reception capabilities throughout the impacted area and surrounding region.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Support SLTT governments in coordinating transportation assets, including accessible transportation at reception sites to transport evacuees to appropriate shelters.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Develop requirements for manifesting evacuees.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Coordinate with the energy industry to ensure fuel is available to responders and individuals along the evacuation route. Private sector fuel distributors identify specific retail outlets to remain open and dispense fuels to emergency responders and/or evacuees.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Identify shortfalls and use additional capabilities to transport identified populations, support required pet evacuation capabilities, and provide reception capabilities throughout the impacted area and surrounding region while maintaining tracking of evacuees.</td>
</tr>
<tr>
<td>#1</td>
<td>DOT</td>
<td>Coordinate evacuation routes with SLTT departments and agencies; private sector and voluntary organizations.</td>
</tr>
<tr>
<td>#1:</td>
<td>DOT</td>
<td>Coordinate the impact of outflow of evacuating persons and the transportation requirements for the entry of response teams and supplies into the affected area.</td>
</tr>
<tr>

<td>#5</td>
<td>NOAA</td>
<td>Provide weather-related information for the area being evacuated and along evacuation routes and assists with public communication through use of the Emergency Alert System (EAS).</td>
</tr>
<tr>
<td>#5</td>
<td>FEMA</td>
<td>Assist in the development of evacuation plans for major metropolitan areas, in conjunction with the local jurisdictions.</td>
</tr>
<tr>
<td>#5</td>
<td>FEMA</td>
<td>Provide situational awareness and coordination of mass evacuation efforts.</td>
</tr>
<tr>
<td>#5</td>
<td>FEMA</td>
<td>Develop requirements for manifesting evacuees.</td>
</tr>
<tr>
<td>#5</td>
<td>FEMA</td>
<td>Support federal evacuation support actions, as requested.</td>
</tr>
<tr>
<td>#5</td>
<td>FEMA</td>
<td>Conduct continuous adaptive planning at the national level to facilitate a coordinated response to the incident. Plans for the delivery of required resources, the next response period, and the evacuation of survivors are examples of the type of planning taking place.</td>
</tr>
<tr>
<td>#5</td>
<td>FEMA</td>
<td>Provide reports on the status of evacuation, repopulation, and transportation to support shared situational awareness and the common operating picture. Coordinate with SLTT entities, private sector, and voluntary organization transportation service providers to ensure that vehicles and vehicle operators are available and are dispatched to pick-up points.</td>
</tr>
<tr>
<td>#5</td>
<td>FEMA</td>
<td>Provide support to coordinate the evacuation of household pets.</td>
</tr>
<tr>
<td>#5</td>
<td>FEMA</td>
<td>Geospatially tag incident reports and identify blocked evacuation routes.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Provide information and coordination in the nonmedical mass care aspects required for inclusive mass evacuations, including accessible housing and human services, and reunification.</td>
</tr>

<td>Task</td>
</tr>
<tr>
<td>---------------------------</td>
<td>-----------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA/ARC</td>
<td>Coordinate with SLTT entities, as well as the support agencies under #6, to ensure adequate shelter and care facilities are available for receiving evacuees, including individuals with access and functional needs, and those with pets, service or assistance animals, are available for receiving evacuees.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Works with assigned Disability Integration Advisor to incorporate local and national disability partners into all areas of mass care.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Shares information regarding transport of evacuees to include mode of transportation, destination, number of evacuees and animals being transported, and date/time for expected arrival of evacuees to the Voluntary Agency providing shelter services in the receiving city as soon as possible prior to the evacuation.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Work with state lead agencies for mass care prior to, during, and after an incident to identify potential host-states.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Work with Voluntary Agencies and the state-designated lead agencies for mass care to provide mass care services, ensuring that resources are available to support federal evacuation efforts in receiving states.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Ensure federal resources are available to support accessible feeding and sheltering along the evacuation route.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Provide information directly to Voluntary Agencies providing sheltering support to family members accompanying National Disaster Medical System (NDMS) evacuees on the number of family members being evacuated, when, where and in which city they will be arriving.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Provide support to SLTT evacuation efforts by facilitating requests for food and shelter supplies, and security in support of mass evacuations.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Voluntary Agency Liaisons will coordinate with voluntary agencies affiliated with National Voluntary Organizations Active in Disaster, other nongovernmental organizations, and private-sector entities for federally supported evacuation in affected and receiving states.</td>
</tr>
<tr>
<td>#6</td>
<td>NVOAD</td>
<td>Provide support to mass care operations in affected states.</td>
</tr>
<tr>
<td>#6</td>
<td>Red Cross</td>
<td>Coordinate with FEMA to ensure that adequate information is available about shelters and for coordinating the receipt of evacuees at various shelter locations.</td>
</tr>
<tr>
<td>#6</td>
<td>Red Cross</td>
<td>Provide Mass Care liaison staff to work at FEMA locations to work with state lead agencies for mass care and FEMA in order to facilitate resource requests in support of federal evacuations and provides information on mass care.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Provide staff and support for identifying housing for evacuees.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Identify critical transportation for survivors with disabilities and others with access and functional needs.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Support mobilization and implementation of mechanisms to track the movement of evacuees, resources, household pets, individuals with service and assistance animals, medical equipment, and luggage.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Provide mass care support to survivors at embarkation, debarkation, and reception centers, evacuation transportation hubs, post-decontamination areas, etc., to make sure that basic needs are met, including hydration and feeding, tracking, medical needs, and information.</td>
</tr>
<tr>
<td>Emergency Support Function</td>
<td>Agency</td>
<td>Task</td>
</tr>
<tr>
<td>----------------------------</td>
<td>--------</td>
<td>------</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Provide resources, subject matter expertise, and coordination with other FEMA components and Emergency Support Function #6 partners to support mass evacuation activities and ensure the safe evacuation of household pets and service and assistance animals. (Note: Evacuees who have chronic medical conditions may be evacuated with the general population. For evacuations of patients, refer to Emergency Support Function #8.)</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Provide relocation assistance for the smooth transition of survivors from sheltering and interim housing (including physically accessible interim housing for individuals with disabilities) to permanent housing as quickly as possible, and if applicable, coordinate with ESF#10 on status of any Emergency Support Function #10 oil/chemical response actions that may be needed before allowing residents to return home.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Support the evacuation of survivors who exceed the capacity of existing or projected shelter spaces, when appropriate.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Provide a mass care/emergency assistance evacuee support liaison for federal evacuation support planning in coordination with SLTT governments.</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Provide evacuee support (e.g., support for registration and tracking of evacuees and mass care for evacuation operations).</td>
</tr>
<tr>
<td>#6</td>
<td>FEMA</td>
<td>Activate and deploy pre-identified personnel/teams and other resources to identify immediate mass care/emergency assistance requirements for the affected area, and coordinate with logistics to support requirements.</td>
</tr>
</tbody>

## Appendix 10: State Evacuation Authorities

### Table 27: State Evacuation Authorities

<table>
<thead>
<tr>
<th>State</th>
<th>Evacuation Authority and Trigger</th>
<th>Statutory Citation and Text</th>
</tr>
</thead>
</table>
| **AK** | **Authority:** Governor or an official of a fire department registered with the Alaska Fire Marshall’s office  
**Trigger:** State of Emergency | [AS 18.70.075 and .090](https://legislature.alaska.gov/billsearchDetails/18-70-075). In Alaska, the authority for ordering a mandatory evacuation rests only with the Governor or an official of a fire department registered with the Alaska Fire Marshall’s office. Local governments may decide to create a local ordinance to authorize the implementation of evacuations by people other than fire department officials. Mandatory evacuations or evacuations by force are not widely supported in Alaska and should only be discussed in the case of unaccompanied minors, people under the influence of drugs or alcohol, or people unable to make sound decisions due to mental illness or other special considerations. |
| **AL** | **Authority:** Governor  
Local governing body of a political subdivision (but only by direction and under the supervision of the Governor or the State Emergency Management Agency)  
**Trigger:** State of Emergency | Ala. Code § 31-9-6. Powers and duties of Governor with respect to emergency management generally.  
“...In performing his duties under this chapter, the Governor is authorized and empowered: … (4) To make, amend and rescind the necessary orders, rules and regulations looking to the ... the evacuation and reception of civilian population”.  
“(a) The provisions of this section shall be operative only during the existence of a state of emergency. … During the period that the proclaimed emergency exists or continues, the Governor shall have and may exercise the following additional emergency powers: … (4) To provide for and compel the evacuation of all or part of the population from any stricken or threatened area or areas within the state and to take such steps as are necessary for the receipt and care of such evacuees.”  
Ala. Code § 31-9-10. Local emergency management organizations; emergency powers of political subdivisions.  
“(c) No local governing body of a political subdivision shall have the authority to provide for and compel evacuation of the area except by the direction and under the supervision of the Governor or the State Emergency Management Agency, or both.” |
| **AR** | **Authority:** Chief Elected Official  
**Trigger:** State of Disaster Emergency | 2016 ARCEMP Basic Plan, Pg. 10/11  
The County Judges, the City Manager of Little Rock, and the Mayor of North Little Rock are the chief elected officials of Arkansas’ designated emergency management jurisdictions. Although their roles require providing direction and guidance to constituents during an incident, their day-to-day activities do not necessarily focus on emergency management and incident response. The chief elected official can declare that a state of emergency exists within the jurisdiction so that state disaster relief can be utilized. The chief elected official is also the person who will make a decision to evacuate an affected area should the situation require it. |
| **AZ** | **Authority:** Governor  
**Trigger:** State of Emergency | ARS 26-303 Emergency powers of governor; termination; authorization for adjutant general; limitation  
E. During a state of emergency: 1. The governor shall have complete authority over all agencies of the state government and the right to exercise, within the area designated, all police power vested in the state by the constitution and laws of this state in order to effectuate the purposes of this chapter. |
| **CA** | **Authority:** Governor  
**Trigger:** State of Emergency | Emergency Services Act: The Governor, delegates of the Governor, local governing bodies and their designated representatives, statutorily designated law enforcement agents, and statutorily authorized government employees have the authority to restrict the movement of people and property in an emergency situation. |

<tr>
<td>CO</td>
<td><strong>Authority:</strong> Governor&lt;br&gt;<strong>Trigger:</strong></td>
<td>The authority rests with the Governor to:&lt;br&gt;Direct and compel the evacuation of all or part of the population from any stricken or threatened area within the state if the governor deems this action necessary for the preservation of life or other disaster mitigation, response, or recovery; And&lt;br&gt;Control ingress to and egress from a disaster area, the movement of persons within the area, and the occupancy of premises therein.&lt;br&gt;County Sheriffs have the authority for re-entry into an evacuated area but have no mandatory evacuation authority.&lt;br&gt;<strong>The authority rests with the Governor to:</strong>&lt;br&gt;C.R.S. 24-33.5-704(7)(e) <em>Direct and compel the evacuation of all or part of the population from any stricken or threatened area within the state if the governor deems this action necessary for the preservation of life or other disaster mitigation, response, or recovery; AND</em>&lt;br&gt;C.R.S. 24-33-5-704(7)(g) <em>Control ingress to and egress from a disaster area, the movement of persons within the area, and the occupancy of premises therein.</em></td>
</tr>
<tr>
<td>CT</td>
<td><strong>Authority:</strong> Governor, Department of Public Safety State Police, Mayor, County or City Law Enforcement&lt;br&gt;<strong>Trigger:</strong> Based on information provided by the National Hurricane Center (NHC) and local offices of the National Weather Service (NWS), following consultation with the governor's office, the Connecticut Division of Emergency Management and Homeland Security (DEMHS) may recommend the evacuation coastal communities to the general public.&lt;br&gt;All such recommendations are geared to the evacuation zones mapped by the USACE in the Connecticut Evacuation Zone Atlas. An evacuation recommendation, which may be made by the governor or by the DEMHS Commissioner, does not require a declaration of a state of civil preparedness emergency by the governor, although such a declaration would be likely.&lt;br&gt;In the case of a particularly intense hurricane, the governor may declare a state of civil preparedness emergency and issue an evacuation order in lieu of a recommendation pursuant to his emergency powers under Section 28-9 of the Connecticut General Statutes.</td>
<td></td>
</tr>
<tr>
<td>DC</td>
<td><strong>Authority:</strong> Mayor&lt;br&gt;<strong>Trigger:</strong> Emergency Executive Order/upon reasonable apprehension of the existence of a public emergency and a determination that such order is necessary for the immediate preservation of the public peace, health, safety, or welfare</td>
<td>“The Mayor is authorized under § 7-2304 to issue an emergency executive order upon reasonable apprehension of the existence of a public emergency and a determination that such order is necessary for the immediate preservation of the public peace, health, safety, or welfare, and as a prerequisite to requesting emergency or major disaster assistance under the Disaster Relief Act of 1974. Such order shall state: (1) the existence, nature, extent, and severity of the public emergency; (2) the measures necessary to relieve the public emergency; (3) the specific requirements of the order and the persons upon whom the order is binding; and (4) the duration of the order. Upon issuing the order, the Mayor may issue an emergency executive order, which shall: ...Implement measures to protect persons and property in the District, including evacuation of persons in the District to District emergency shelters or to shelters outside of the District with the approval of the Governor of the receiving state, and to provide for the reception, sheltering, maintenance and care of such evacuees. Evacuation of any personnel or activity of the Federal Government requires the consent of the President or be conducted pursuant to a prearranged evacuation plan.”&lt;br&gt;Currently, no federal or District code allows for physical removal of District residents during a public emergency. However, the Mayor can recommend evacuation as a suitable protective measure. Once a disaster declaration has been issued, re-entry and movement in and around the hazard-stricken area may be restricted.</td>

| IA    | **Iowa Code § 29A.7 Commander in chief** – The governor is the commander in chief of the military forces, except when they are on federal active duty. The governor may employ the military forces of the state for the defense of the state, to provide assistance to civil authorities in emergencies resulting from disasters or public disorders as defined in section 29C.2, including homeland security and defense duties, and for parades and ceremonies of a civic nature.  
**Iowa Code § 29C.21 – Emergency Management Assistance Compact Article X – Evacuation** – Plans for the orderly evacuation and interstate receptions of portions of the civilian population as the result of any emergency or disaster of sufficient proportions to so warrant shall be worked out and maintained between the party states. Such plans shall be put into effect by request of the state from which evacuees come and shall include:  
1. The manner of transporting such evacuees;  
2. The number of evacuees to be received in different areas  
3. Manner in which food, clothing, housing and medical care will be provided;  
4. The registration of evacuees;  
5. Provision of facilities for notification of relatives or friends;  
The party states shall mutually agree as to reimbursement of out-of-pocket expenses incurred in receiving and caring for evacuees. After the termination of the emergency or disaster, the party state from which evacuees come shall assume responsibility for the ultimate support of repatriation of such evacuees.  
**Iowa Code § 29C.22 – Statewide Mutual Aid Compact Article X – Evacuation and sheltering** - Plans for the orderly evacuation and reception of portions of the civilian population as the result of any emergency or disaster shall be worked out and maintained between the participating governments and the emergency management or services directors of the various jurisdictions where any type of incident requiring evacuations might occur. The plans shall be put into effect by the request of the participating government from which evacuees come and shall include:  
(A) The manner of transporting the evacuees, the number of evacuees to be received;  
(B) Manner in which food, clothing, housing and medical care will be provided;  
(C) Registration of the evacuees;  
(D) Provision of facilities for the notification of relatives and or friends;  
(E) The forwarding of evacuees to other areas;  
(F) The bringing of additional materials, supplies, and all other relevant factors.  
(G) The participating government receiving evacuees and the participating government from which evacuees come shall mutually agree as to reimbursement of out-of-pocket expenses incurred.  
(H) Responsibility for the ultimate support of repatriation of evacuees falls to the participating government from which the evacuees come.  

| ID    | Authority: Governor Trigger: State disaster or emergency | **Idaho Code §46-1008 -- (4)** During the continuance of any state of disaster emergency, the governor is commander-in-chief of the militia and may assume command of all other forces available for emergency duty. To the greatest extent practicable, the governor shall delegate or assign command authority by prior arrangement embodied in appropriate executive orders or regulations, but nothing herein restricts his authority to do so by orders issued at the time of the disaster emergency.  
(5) In addition to any other powers conferred upon the governor by law, he may:  
e) Direct and compel the evacuation of all or part of the population from any stricken or threatened area within the state if he deems this action necessary for the preservation of life or other disaster mitigation, response, or recovery;  
f) Prescribe routes, modes of transportation, and destinations in connection with evacuation;

|       | evacuates a disaster area, law enforcement may prohibit the individual from returning to the area. Should a local government prosecute an individual for returning to a disaster area, it would be for going around a traffic barricade or violating a local ordinance, not for failing to follow the governor’s evacuation recommendation. | (8) To control ingress and egress to and from a disaster area, the movement of persons within the area, and the occupancy of premises therein. 20 Ill. Comp. Stat. § 3305/10 (2017). Emergency Services and Disaster Agencies. (a) Each political subdivision within this State shall be within the jurisdiction of and served by the Illinois Emergency Management Agency and by an emergency services and disaster agency responsible for emergency management programs. [The deleted paragraphs of this section identify who has authority to establish an “emergency services and disaster agency” for the various types of jurisdictions, i.e. municipalities, villages, townships and incorporated towns.] (a) The principal executive officer or his or her designee of each political subdivision in the State shall annually notify the Illinois Emergency Management Agency of the manner in which the political subdivision is providing or securing emergency management, identify the executive head of the agency or the department from which the service is obtained, or the liaison officer in accordance with paragraph (d) of this Section and furnish additional information relating thereto as the Illinois Emergency Management Agency requires. (b) Each emergency services and disaster agency shall prepare an emergency operation plan for its geographic boundaries that complies with planning, review, and approval standards promulgated by the Illinois Emergency Management Agency. The Illinois Emergency Management Agency shall determine which jurisdictions will be required to include earthquake preparedness in their local emergency operations plans. (c) The emergency services and disaster agency shall prepare and distribute to all appropriate officials in written form a clear and complete statement of the emergency responsibilities of all local departments and officials and of the disaster chain of command. (d) Each emergency services and disaster agency shall have a Coordinator who shall be appointed by the principal executive officer of the political subdivision in the same manner as are the heads of regular governmental departments…. The Coordinator shall have direct responsibility for the organization, administration, training, and operation of the emergency services and disaster agency, subject to the direction and control of that principal executive officer. Each emergency services and disaster agency shall coordinate and may perform emergency management functions within the territorial limits of the political subdivision within which it is organized as are prescribed in and by the State Emergency Operations Plan, and programs, orders, rules and regulations as may be promulgated by the Illinois Emergency Management Agency and by local ordinance and, in addition, shall conduct such functions outside of those territorial limits as may be required under mutual aid agreements and compacts as are entered into under subparagraph (5) of paragraph (c) of Section 6. 20 Ill. Comp. Stat. § 3305/11 (2017). Local Disaster Declarations A local disaster may be declared only by the principal executive officer of a political subdivision, or his or her interim emergency successor, as provided in Section 7 of the “Emergency Interim Executive Succession Act.” It shall not be continued or renewed for a period in excess of 7 days except by or with the consent of the governing board of the political subdivision. The effect of a declaration of a local disaster is to activate the emergency operations plan of that political subdivision and to authorize the furnishing of aid and assistance thereunder. 65 Ill. Comp. Stat. § 5/11-1-6 (2017). The corporate authorities of each municipality may by ordinance grant to the

| IN    | Authority: Governor Trigger: Declaration of a Disaster Emergency | **Ind. Code 10-14-3-2 (2017). Emergency Management**  
As used in this chapter, “emergency management” means the preparation for and the coordination of all emergency functions, other than functions for which military forces or other federal agencies are primarily responsible, to prevent, minimize, and repair injury and damage resulting from disasters. The functions include the following:  
(9) Evacuation of persons from stricken areas.  
**Ind. Code 10-14-3-11 (2017). Governor Duties**  
(a) The governor has general direction and control of the agency and is responsible for carrying out this chapter. In the event of disaster or emergency beyond local control, the governor may assume direct operational control over all or any part of the emergency management functions within Indiana.  
(b) In performing the governor’s duties under this chapter, the governor may do the following:  

(a) Cooperate with the President of the United States and the heads of the armed forces, the Federal Emergency Management Agency, and the officers and agencies of other states in matters pertaining to emergency management and disaster preparedness, response, and recovery of the state and nation. In cooperating under this subdivision, the governor may take any measures that the governor considers proper to carry into effect any request of the President of the United States and the appropriate federal officers and agencies for any emergency management action, including the direction or control of disaster preparations, including the following:  

D) Conducting civilians and the movement and cessation of movement of pedestrians and vehicular traffic during, before, and after drills, actual emergencies, or other disasters.  

(F) Evacuating and receiving the civilian population.  
(b) Take any action and give any direction to state and local law enforcement officers and agencies as may be reasonable and necessary for securing compliance with this chapter and with any orders, rules, and regulations made under this chapter.  

**Ind. Code 10-14-3-12 (2017). Disaster emergency; emergency gubernatorial powers.**  
2) The governor shall declare a disaster emergency by executive order or proclamation if the governor determines that a disaster has occurred or that the occurrence or the threat of a disaster is imminent. The state of disaster emergency continues until the governor:  
(1) determines that the threat or danger has passed or the disaster has been dealt with to the extent that emergency conditions no longer exist; and  
(2) terminates the state of disaster emergency by executive order or proclamation. |

amendments there to, and which orders and proclamations shall be null and void thereafter unless ratified by concurrent resolution of the legislature. Such orders and proclamations may be revoked at any time by concurrent resolution of the legislature.

- During a state of disaster emergency declared under K.S.A. 48-924, and amendments thereto, and in addition to any other powers conferred upon the governor by law, the governor may:
  - Suspend the provisions of any regulatory statute prescribing the procedures for conduct of state business, or the orders or rules and regulations of any state agency which implements such statute, if strict compliance with the provisions of such statute, order or rule and regulation would prevent, hinder or delay in any way necessary action in coping with the disaster;
  - Utilize all available resources of the state government and of each political subdivision as reasonably necessary to cope with the disaster;
  - Transfer the supervision, personnel or functions of state departments and agencies or units thereof for the purpose of performing or facilitating emergency management activities;
  - Subject to any applicable requirements for compensation under K.S.A. 48-933, and amendments thereto, commandeer or utilize any private property if the governor finds such action necessary to cope with the disaster;
  - Direct and compel the evacuation of all or part of the population from any area of the state stricken or threatened by a disaster, if the governor deems this action necessary for the preservation of life or other disaster mitigation, response or recovery;
  - Prescribe routes, modes of transportation and destinations in connection with such evacuation;
  - Control ingress and egress of persons and animals to and from a disaster area, the movement of persons and animals within the area and the occupancy by persons and animals of premises therein;
  - Suspend or limit the sale, dispensing or transportation of alcoholic beverages, explosives and combustibles;
  - Make provision for the availability and use of temporary emergency housing;
  - Require and direct the cooperation and assistance of state and local governmental agencies and officials; and
  - Perform and exercise such other functions, powers and duties as are necessary to promote and secure the safety and protection of the civilian population.

- The governor shall exercise the powers conferred by subsection (c) by issuance of orders under subsection (b). The adjutant general, subject to the direction of the governor, shall administer such orders.

Article 32. - INTERSTATE CIVIL DEFENSE AND DISASTER COMPACT

48-3202. Same; governor authorized to enter into compact on behalf of state; written agreement. The governor is hereby authorized to enter into the interstate civil defense and disaster compact on behalf of the state of Kansas with one or more of the states which have legally joined said compact or which are authorized to join said compact, by entering into a written agreement therefor with the governor of each such state. Such written agreement may specify the period of time that said compact is entered into with regard to each such state.

the disaster, and the conditions permitting the termination of the state of disaster….

(4) The governor shall, by executive order or proclamation, declare a state of emergency if he or she finds that an emergency has occurred or that the threat of an emergency exists. The state of emergency shall continue until the governor finds that the threat or danger has passed, the emergency has been dealt with to the extent that emergency conditions no longer exist, or until the declared state of emergency has been in effect for 28 days. After 28 days, the governor shall issue an executive order or proclamation declaring the state of emergency terminated, unless a request by the governor for an extension of the state of emergency for a specific number of days is approved by resolution of both houses of the legislature. An executive order or proclamation issued pursuant to this subsection shall indicate the nature of the emergency, the area or areas threatened, the conditions causing the emergency, and the conditions permitting the termination of the state of emergency.

Mich. Comp. Laws § 30.405 (2017). Additional powers of governor; prohibition; disobeying or interfering with rule, order, or directive as misdemeanor.

1) In addition to the general authority granted to the governor by this act, the governor may, upon the declaration of a state of disaster or a state of emergency do 1 or more of the following:

(e) Direct and compel the evacuation of all or part of the population from a stricken or threatened area within the state if necessary for the preservation of life or other mitigation, response, or recovery activities.

(f) Prescribe routes, modes, and destination of transportation in connection with an evacuation.

(g) Control ingress and egress to and from a stricken or threatened area, removal of persons within the area, and the occupancy of premises within the area.

(3) A person who willfully disobeys or interferes with the implementation of a rule, order, or directive issued by the governor pursuant to this section is guilty of a misdemeanor.

Minn. Laws § 12.03 (2016). Definitions

Subd. 4. Emergency management. “Emergency management” means the preparation for and the carrying out of emergency functions, other than functions for which military forces are primarily responsible, to prevent, minimize and repair injury and damage resulting from disasters, from acute shortages of energy, or from incidents occurring at nuclear power plants that pose radiological or other health hazards. These functions include, without limitation, firefighting services, police services, medical and health services, rescue, engineering, warning services, communications, radiological, chemical and other special weapons defense, evacuation of persons from stricken areas, emergency human services, emergency transportation, existing or properly assigned functions of plant protection, temporary restoration of public utility services, implementation of energy supply emergency conservation and allocation measures, and other functions related to civilian protection, together with all other activities necessary or incidental to preparing for and carrying out these functions.

Minn. Laws § 12.21 (2016). Governor

Subdivision 1. General authority. The governor (1) has general direction and control of emergency management, (2) may carry out the provisions of this chapter, and (3) during a national security emergency declared as existing under section 12.31, during the existence of an energy supply emergency as declared under section 216C.15, or during the existence of an emergency resulting from an incident at a nuclear power plant that poses a radiological or...
other health hazard, may assume direct operational control over all or any part
of the emergency management functions within the state.

Subd. 3. Specific authority. In performing duties under this chapter and to
effect its policy and purpose, the governor may:

(7) cooperate with the president and the heads of the armed forces, the
Emergency Management Agency of the United States and other appropriate
federal officers and agencies, and with the officers and agencies of other states
in matters pertaining to the emergency management of the state and nation,
including the direction or control of:

(iv) the conduct of persons in the state, including entrance or exit from any
stricken or threatened public place, occupancy of facilities, and the movement
and cessation of movement of pedestrians, vehicular traffic, and all forms of
private and public transportation during, prior, and subsequent to drills or actual
emergencies;
(vi) the evacuation, reception, and sheltering of persons.

**Article 9.** Plans for the orderly evacuation and reception of the civilian population as the result of an emergency or disaster shall be worked out from time to time between representatives of the party states and the various local civil defense areas thereof. Such plans shall include the manner of transporting such evacuees, the number of evacuees to be received in different areas, the manner in which food, clothing, housing, and medical care will be provided, the registration of the evacuees, the providing of facilities for the notification of relatives or friends and the forwarding of such evacuees to other areas or the bringing in of additional materials, supplies, and all other relevant factors. Such plans shall provide that the party state receiving evacuees shall be reimbursed generally for the out-of-pocket expenses incurred in receiving and caring for such evacuees, for expenditures for transportation, food, clothing, medicines and medical care and like items. Such expenditures shall be reimbursed by the party state of which the evacuees are residents, or by the United States government under plans approved by it. After the termination of the emergency or disaster the party state of which the evacuees are resident shall assume the responsibility for the ultimate support or repatriation of such evacuees.

**Nebraska Revised Statute 1-124.**

**EMERGENCY MANAGEMENT ASSISTANCE COMPACT**

The Legislature of Nebraska hereby ratifies the Emergency Management Assistance Compact on behalf of the State of Nebraska with any other state legally joining therein in the form substantially as follows:

**EMERGENCY MANAGEMENT ASSISTANCE COMPACT**

**ARTICLE X – EVACUATION**

Plans for the orderly evacuation and interstate reception of portions of the civilian population as the result of any emergency or disaster of sufficient proportions to so warrant, shall be worked out and maintained between the party states and the emergency management/services directors of the various jurisdictions where any type of incident requiring evacuations might occur. Such plans shall be put into effect by request of the state from which evacuees come and shall include the manner of transporting such evacuees, the number of evacuees to be received in different areas, the manner in which food, clothing, housing, and medical care will be provided, the registration of the evacuees, the providing of facilities for the notification of relatives or friends, and the forwarding of such evacuees to other areas or the bringing in of additional materials, supplies, and all other relevant factors. Such plans shall provide that the party state receiving evacuees and the party state from which the evacuees come shall mutually agree as to reimbursement of out-of-pocket expenses incurred in receiving and caring for such evacuees, for expenditures for transportation, food, clothing, medicines and medical care, and like items. Such expenditures shall be reimbursed as agreed by the party state from which the evacuees come. After the termination of the emergency or disaster, the party state from which the evacuees come shall assume the responsibility for the ultimate support of repatriation of such evacuees.

**ARTICLE XI – IMPLEMENTATION**

A. This compact shall become operative immediately upon its enactment into law by any two states; thereafter, this compact shall become effective as to any other state upon its enactment by such state.

B. Any party state may withdraw from this compact by enacting a statute repealing the same, but no such withdrawal shall take effect until thirty days after the governor of the withdrawing state has given notice in writing of such withdrawal to the governors of all other party states. Such action shall not relieve the withdrawing state from obligations assumed hereunder prior to the effective date of withdrawal.

C. Duly authenticated copies of this compact and of such supplementary agreements as may be entered into shall, at the time of their approval, be deposited with each of the party states and with the Federal Emergency Management Agency and other appropriate agencies of the United States Government.

<td>Authority: Governor Trigger: Voluntary Evacuation – In the event of a threat to a population center, local officials or the governor may recommend that residents who feel threatened leave the at-risk area. This evacuation usually, but not always, occurs prior to a mandatory evacuation order being issued. Selected shelters will be opened. Mandatory Evacuation – Under the terms of Title I – Chapter 4, Section 4:45, as defined in RSA 21-P: 35, the governor is authorized to mandate and compel evacuation in New Hampshire. During a mandatory evacuation, all residents are expected to leave the impacted area. Under a mandatory evacuation order, nursing homes and residential-care facilities have to be evacuated. Protective Relocation – This form of evacuation is normally associated with hurricanes or potential flooding incidents. Even though inland areas are not vulnerable to storm surge; they are at risk to the high winds associated with hurricanes and the potential for inundation due to excessive rainfall, snow-melt, and/or potential dam failures. In order to protect this population, it might be necessary to relocate persons living in vulnerable structures to a more damage-resistant facility. Source Laws 1999, LB 83, § 1.</td>

| NY    | **Authoriti:** New York State Disaster Preparedness Commission  
**Trigger:** Anticipation of Attack  
**Authority:** Chief executive or mayor of local jurisdiction  
Because of the existing danger of disasters of unprecedented size and destructiveness resulting from attack and in order to insure that the preparations of the state will be adequate to deal with such disasters and generally to provide for the civil defense, and to assist other states and the Federal Government to achieve these objectives throughout the nation, the commission shall have the following powers and perform the following duties:  
I. **Evacuation** of certain persons in the event of or anticipation of attack, including the establishment of temporary housing and schools and other emergency facilities.  
New York Consolidated Laws, Executive Law - EXC § 24. Local state of emergency; local emergency orders by chief executive  
1. Notwithstanding, any inconsistent provision of law, general or special, in the event of a disaster, rioting, catastrophe, or similar public emergency within the territorial limits of any county, city, town or village, or in the event of reasonable apprehension of immediate danger thereof, and upon a finding by the chief executive thereof that the public safety is imperiled thereby, such chief executive may proclaim a local state of emergency within any part or all of the territorial limits of such local government.  
Following such proclamation and during the continuance of such local state of emergency, the chief executive may promulgate local emergency orders to protect life and property or to bring the emergency situation under control. As illustration, such orders may, within any part or all of the territorial limits of such local government, provide for:  
b. the designation of specific zones within which the occupancy and use of buildings and the ingress and egress of vehicles and persons may be prohibited or regulated;  
e. the prohibition and control of the presence of persons on public streets and places; |
| OH    | **Authority:** Governor  
**Trigger:** Emergency Declaration  
**Note:** The Ohio Revised Statute does not expressly define an emergency or disaster declaration process. The governor’s authority to issue an emergency or disaster declaration is implied in the “supreme executive” power vested in him through the Ohio Constitution. Ohio Const. Art. III, § 5.  
Moreover, a resolution that authorizes certain actions to be taken in response to a disaster can be made by any political subdivision. | Ohio Rev. Stat. § 5502.21 (2017). Emergency management definitions.  
** (C) **“Chief executive” means the president of the United States, the governor of this state, the board of county commissioners of any county, the board of township trustees of any township, or the mayor or city manager of any municipal corporation within this state.  
(D) **“Civil defense” is an integral part of emergency management that includes all those activities and measures designed or undertaken to minimize the effects upon the civilian population caused or that would be caused by any hazard and to effect emergency repairs to, or the emergency restoration of, vital equipment, resources, supplies, utilities, and facilities necessary for survival and for the public health, safety, and welfare that would be damaged or destroyed by any hazard. **“Civil defense” includes, but is not limited to:**  
1. Those measures to be taken during a hazard, including all of the following:  
   o The enforcement of those passive defense regulations necessary for the protection of the civilian population and prescribed by duly established military or civil authorities;  
   o The evacuation of personnel to shelter areas;  
   o The control of traffic and panic situations;  
2. Those measures to be taken after a hazard has occurred, including all of the following:  
   **(k) Any other activities that may be necessary for survival and the overall health, safety, and welfare of the civilian population.** |

| PR    | **Authority:** Commonwealth of Puerto Rico Emergency Management and Disaster Administration Agency [AEMEAD (PREMA)]  
**Trigger:** In the event of an emergency or disaster with serious risk to safety of persons or property  
§ 172a. Definitions  
(a) Commonwealth Agency -- Means the Commonwealth of Puerto Rico Emergency Management and Disaster Administration Agency  
(f) Evacuation -- Means the orderly movement, controlled by phases and supervised, of civilians from danger zones or potentially dangerous zones, to be received or located in safe areas.  
(g) Director-- Means the Executive Director of the Commonwealth Agency.  
**§ 172e. Director--Authorities and Powers**  
The Director shall have the responsibilities, authorities, and powers necessary and convenient to enforce the provisions of this subchapter, including but not limited to the following:  
(u) Develop and implement a public building evacuation plan specifically geared toward addressing the special needs of persons with disabilities with respect to such process and to review said plan annually.  
**§ 172r. Violations and Penalties**  
Any person who commits any of the following acts shall be sanctioned with a penalty of imprisonment not to exceed six (6) months or a fine not to exceed five thousand dollars ($5,000), or both penalties at the discretion of the court:  
(c) Failing to observe civilian population evacuation orders issued by the Commonwealth Agency as part of the enforcement of its plan in cases of emergency or disaster. It is hereby provided that minors or disabled persons may be removed against the will of their parents, guardians, custodians or tutors during a state of emergency and once the Governor has declared such a state of emergency. For the purposes of this subchapter, a “disabled person” is an individual with a mental disability that seriously impairs his capacity to act on his own.  
(d) Hindering the evacuation, search, reconstruction or assessment and investigation of damages conducted by federal, Commonwealth or municipal agencies, endangering his life or the lives of other persons, or persisting in carrying out any activity, including those of a recreational nature that endanger his life or the lives of other persons, after having been alerted by the authorities once a hurricane watch has been issued by the pertinent authorities or while a state of emergency declared by the Governor of Puerto Rico through an Executive Order is in effect.  
When it is determined that the violation of the laws and fire safety and prevention regulations constitutes a serious risk to the safety of persons or property, the Fire Chief shall order the temporary evacuation of any non-residential lot, building or structure. The evacuation order issued under this section shall be personally notified to the owner, administrator, person in charge or occupant of the affected property, or his representative. The temporary evacuation ordered by the Fire Chief shall not exceed a term of twenty-four (24) hours. Provided, that when the serious risk to the safety of persons or property persists, the Fire Chief shall be empowered to extend the term of a temporary evacuation order after holding an administrative hearing. Said order shall be in effect until the deficiencies indicated are corrected.  
Governor of the State of Rhode Island can order an evacuation under the authority and powers granted him/her by the General Laws of the State of Rhode Island, Title 30, Chapter 30-15, as amended. |

<tr>
<td>Definition</td>
</tr>
<tr>
<td>---------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Evacuation Order</strong></td>
</tr>
<tr>
<td>Jurisdictionally initiated actions for an organized, phased, and supervised withdrawal, dispersal, or removal of people from dangerous or potentially dangerous areas, and their reception and care in safe areas. In each county, a CPG comprised of local elected officials and emergency management partners will confer regarding the need to initiate evacuation plans, including which areas to evacuate and the timing of the evacuation.</td>
</tr>
<tr>
<td><strong>Evacuation Zone</strong></td>
</tr>
<tr>
<td>The geographical area where residents may be directed to evacuate depending on the impacts of the hazard (i.e.: tides, storm intensity, path, and/or other factors).</td>
</tr>
<tr>
<td><strong>Host Community</strong></td>
</tr>
<tr>
<td>Communities tasked as destination locations for evacuees with government-coordinated or -sponsored evacuation sites. These communities “host” evacuees requiring shelter. May also be referred to as a receiving community.</td>
</tr>
<tr>
<td><strong>Impact</strong></td>
</tr>
<tr>
<td>The incident, threat, or hazard consequence.</td>
</tr>
<tr>
<td><strong>Incident</strong></td>
</tr>
<tr>
<td>An occurrence, natural or manmade, that necessitates a response to protect life or property.</td>
</tr>
<tr>
<td><strong>Individual with a Disability</strong></td>
</tr>
<tr>
<td>Individual who has a physical or mental impairment that substantially limits one or more major life activities (an “actual disability”), or a record of a physical or mental impairment that substantially limits a major life activity (“record of”), or an actual or perceived impairment, whether or not the impairment limits or is perceived to limit a major life activity, that is not both transitory and minor (“regarded as”). Individuals with disabilities have civil rights protections that may not be waived under any circumstances, including throughout emergencies and disasters.</td>
</tr>
<tr>
<td><strong>Infrastructure Systems</strong></td>
</tr>
<tr>
<td>Per the Response FIOP (Appendix 5 to Annex C), the Infrastructure Systems (IS) core capability tasks are to decrease and stabilize immediate infrastructure threats to the affected population, and to re-establish critical infrastructure in affected areas.</td>
</tr>
<tr>
<td><strong>Integrated Public Alert and Warning System (IPAWS)</strong></td>
</tr>
<tr>
<td>FEMA’s IPAWS uses redundant communications services accessed via an integrated platform to enable approved Federal, State, Territorial, Tribal, and Local authorities (currently more than 1,300 agencies have access) to rapidly transmit to the public all-hazards alerts, warnings, and notifications to save lives and protect against injuries and losses during all phases of incidents, emergencies and disasters. Additional information is available at: fema.gov/ipaws.</td>
</tr>
<tr>
<td><strong>Lag Time</strong></td>
</tr>
<tr>
<td>Lag time is the period of time between the notification of an event and when evacuation and shelter-in-place operations are actually activated. Lag times will vary based upon the type of event, the partners engaged, communication channels, network disruptions and other incident-based realities.</td>
</tr>
<tr>
<td><strong>Lead Time</strong></td>
</tr>
<tr>
<td>Lead time is the amount of time between notice of an event and initiation of an event. Lead time for evacuation and shelter-in-place operations will vary based upon the type of event, population of zone(s) being evacuated, time of day, and roadway capacity. Lead time allows resources to be mobilized and in position before the arrival of the threat and prior to the start of an evacuation, and ensures sufficient capacity is in place once the evacuation order is given.</td>
</tr>
<tr>
<td><strong>Mass Care</strong></td>
</tr>
<tr>
<td>The phase in which evacuees are moved out of the disaster or threat area and kept safe until they can return to their community. During this phase, the evacuating jurisdictions need to communicate with host-jurisdictions on a regular basis with information such as; numbers of evacuees, types of evacuees, potential length of evacuation, and any support that will be provided by the evacuating jurisdiction.</td>
</tr>
<tr>
<td><strong>Notification</strong></td>
</tr>
<tr>
<td>A formal informing, an act or instance of making known, or communication of an announcement. A message informing an entity or individual of a situation. Notifications may occur during the plan development process or at any time throughout the life cycle of an incident, event, or threat. Examples of notifications in FEMA are activation orders, mission assignments, team deployments, or informing State and local officials and the public of natural disasters, terrorism, or attacks.</td>
</tr>
<tr>
<td><strong>Notice Events</strong></td>
</tr>
<tr>
<td>The incident, threat, or hazard consequence. Jurisdictions will have advance warning of an impending hazard. The officials will have time to prepare in advance, assess, communicate, and implement protective action measures.</td>
</tr>

121
Federal Acronyms

To promote readability, this annex utilizes acronyms only after the first occurrence of the proper name of a Federal Executive Branch department or agency. The exception to this rule applies to acronyms that only appear within tables and figures in the document, where space considerations and readability render the use of acronyms optimal.
