

Do Your Own Earthquake Home Hazard Hunt

Release Date: Tháng 9 2, 2020

SALT LAKE CITY – Utah residents can do several things to reduce potential earthquake hazards and damage in their homes.

Steps you can take on your own include:

- Strapping down televisions, computers and other expensive or hazardous electronics.
- Securely fastening or moving heavy pictures and mirrors currently located over beds or other furniture.
- Bracing water heaters and making sure that gas models have flexible connections.
- Knowing how and when to shut off utilities.

Some modifications may require a licensed contractor, designer or architect to complete. Among these are:

- Bracing or replacing masonry (brick) chimneys.
- Strengthening garages that have living space above them.
- Upgrading unbraced crawlspace walls and other foundation features.

For a full list of earthquake damage prevention measures and retrofits ? including a cut-away diagram of where these potential hazards can be found in your home ? download the FEMA brochure *Earthquake Home Hazard Hunt* at <https://go.usa.gov/xGgUr> or download the Utah DEM brochure *Putting Down Roots in Earthquake County* at https://www.utah.gov/beready/documents/roots_earthquake_low.pdf.

Meanwhile, you can browse a list of Utah-based licensed contractors, engineers and architects at <https://secure.utah.gov/datarequest/professionals/index.html> or check their licenses at <https://secure.utah.gov/llv/search/index.html>.
